At mid-day the members of the Council and others sat down to luncheon, under the presidency of Mr. W. Howard Hazell (President of the Federation of Master Printers and of the Exhibition), who, on behalf of the Council and the organisers of the Exhibition, extended a cordial welcome. He described the Exhibition as a beneficent one, because it placed before master printers the very latest machinery for carrying on their work. Mr. Hazell mentioned that one of the greatest difficulties facing London master printers was the high wages they had to pay, compared with the lower rates not far away. It was an economic fact all over the world that where wages were high, machinery was used to a greater extent than where wages were low. Where wages were high it was necessary to introduce labour-saving machinery, and he suggested that master printers of London should bear that factor in mind and instal more labour-saving machinery than their competitors in the country. That was one solution of the great difficulties which faced them—that by making themselves more efficient, by using better and more labour-saving machinery, they could reduce their costs and so meet the competition. London was the largest printing centre in the world, and he should also like to see it the finest printing centre, with London master printers furnished with the best machinery, the highest methods and the most skilled craftsmen, so that if any master printer wanted to know how fine printing should be done he would have to come to London. They could scarcely say that now, because were there no master printers who had obsolete machinery and inadequate methods? While there was a master printer a member of their Association in that position there was work for the London Association to undertake. Anything they could do to increase the efficiency of the members would be assisting in keeping the trade in London which might otherwise go to other parts of the world. Efficiency, however, did not only consist in machinery, but in the education of their staffs, and in this connection Mr. Hazell paid a tribute to the facilities afforded by the London School of Printing, which was certainly the largest school of its kind in the whole world.

The moral of his observations was that the master printers should, in their annual accounts, provide for depreciation of their machinery in order that they might be able to scrap it and have funds to instal new plant. Their trade was changing rapidly, and it was only those printers who realised the rapidity of the changes that were taking place, and would take place in the future, who would be able to face the competition, both from within and without London. In conclusion, Mr. Hazell expressed the hope that the London Master Printers' Association might long flourish and continue its work, with even greater success in the future.

Influence of the Association.

Mr. A. Langley, who replied to the toast, said the London Master Printers' Association had done remarkably well during the last few years in increasing their membership. They had certainly increased in size; but were they increasing in power and efficiency for the ultimate good of the trade? He wanted the members of the Council to take it from him very seriously that the fault was very wide and the scope of future developments was very great. If the Association was to achieve the object which they ought to aim at, then more energy and more enthusiasm must be inspired into the general membership. Speaking with a very close knowledge, he declared, without hesitation, that the apathy among London printers was appalling, and if they were to galvanise the membership into real work, the inspiration must come from the members of the Council to the rank and file. He appealed, therefore, to the members of the Council, much as they had already done, to do a little more in the future. They were not only concerned with wages, which, after all, was a small part of their work; the task before the Association was to create a team spirit instead of individual spirit. Mr. Langley proceeded to give a few of the complaints which he had received concerning the work of the Association, and he suggested that if anyone could give them a formula for meeting all the various views they would be doing a real service. (Laughter.)

Caxton's Successors.

Mr. R. A. Austen-Leigh submitted the toast of "Caxton's Successors in London," and in doing so gave a description of an imaginary visit of William Caxton to the Exhibition. Although he suggested they might have some difficulty in recognising Caxton were he to make his appearance, owing to the fact that there was no authentic portrait in existence, he suggested that when he did arrive he would be welcomed by the hospitable organiser, accompanied by that inseparable pair, Mr. Lock and Mr. Burch. When he went round the Exhibition, he was sure Caxton would become more and more bewildered at the complexity of the machinery. He would, however, sink with relief into that haven of rest which contained Mr. George W. Jones' books, because he would find there some examples of the works of his own contemporaries. Mr. Austen-Leigh proceeded with a diverting account of what he considered would be Caxton's impressions of illustrations showing his own activities with the printing press. After ingeniously naming some of the present-day followers of Caxton, the speaker mentioned that they all pursued the same craft, and they were faced, if not with exactly the same, with similar difficulties. They were all drawn to the craft either by the love of its artistry, or else by the very prosaic and not unnatural desire to make a competence, because they had to remember that Caxton did not enter the art with very exalted views. He learned his art at great charge and expense in order to save his eyes, which were dimmed with the overlooking of white paper; and to save himself the making of further copies by hand. He thought they could pride themselves on being the successors of Caxton as the London Master Printers' Association, because they were maintaining the industry on the same clean and noble lines on which it was run in earlier days. In coupling with the toast the name of Mr. Edward Unwin, Mr. Austen-Leigh mentioned that that gentleman for many years had been in the forefront of every movement for the good of their trade. (Applause.)

Mr. Edward Unwin, who was received with great cordiality, said the toast revived many memories, and he recalled some of the incidents of his early days in the printing industry. Asking himself in what sense they were successors of Caxton, he suggested they might be copyists of that historic figure. They could be reproducers in Caxton type, because they could not but admire or desire to emulate the typographic excellence which they saw in those early printed works of his. By all means let them strive to be successors in that relationship. But surely the chief object of his work was to be a benefactor of human kind, and his introduction of the printing press had been the means of the greatest benefit to the greatest number in the world. (Hear, hear.) If they were conscious of that conviction, he would suggest that they should desire, as successors, to live up to it. By contrast, this was an age of machinery, and it often seemed to him that in the hurry and rush which followed on the mechanical arrangements of the present day they were in danger of losing the personal touch with the craft. It seemed to him, if they were to be true successors of Caxton, their aim should be, not only to take advantage of all the modern improvements to which the Chairman had referred, but at the same time make them subservient to the elevation and advancement of the human race throughout the world. In that sense they would be true successors of Caxton in London.

A Record Exhibition.

Mr. R. B. Simnett, Vice-President of the London Master Printers' Association, proposed a vote of thanks to Mr. Hazell for presiding, and paid a tribute to the industry he had shown in connection with the Exhibition. As London master printers they were extremely proud that Mr. Hazell had been elected to the high office of President of the Federation. In the year before them there would be many problems which they would have to solve, and he was quite sure they had every confidence that Mr. Hazell would guide each one of them, as it turned up, to a successful issue. The speaker coupled with the toast the name of Mr. F. W. Bridges, the organiser of the Exhibition.

Mr. Bridges said that since his first association with the exhibitions twenty-one years ago up to the present time he had endeavoured, as far as possible, to create a brotherly feeling throughout the trade, and he thought he had succeeded in a great measure; but he was greatly indebted to the hearty co-operation he had received on all hands. The first exhibition was a small one compared with that. He was glad to know that the Exhibition was recognised throughout the world, and mentioned the fact that the Victorian Master Printers' Association, twelve thousand miles away, had appointed a special representative to attend. (Applause.) The speaker mentioned that the previous Saturday a record crowd had attended from every part of the Kingdom and no fewer than thirty thousand people passed the turnstiles. He took the opportunity of acknowledging the great assistance he had received from the President of the Exhibition (Mr. Hazell) and the members of the Council.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

The New L.M.P.A. President.

Mr. Maurice Clowes, the new president of the London Master Printers' Association, bears a name that is a familiar and honoured one throughout the printing trade. It was as far back as 1789 that his great-grandfather was apprenticed to the printing trade (at Chichester), and the family has been identified with printing ever since. It is interesting, by the way, to note the change of trade grand customs indicated in the fact that great-father paid a premium of £30 for his apprenticeship and served for six years without remuneration.

Mr. Maurice Clowes, who was born in 1884, son of the late Edward Arnott Clowes, was

Mr. Maurice Clowes.

educated at Eton, and, after an interval spent on the Continent, joined the firm of William Clowes and Sons, Ltd., in 1903, learning the trade at the Duke-street Works.

Throughout the period of the war Mr. Clowes commanded the Somerset Royal Horse Artillery, with which he was connected before the outbreak of hostilities, and his Army service gained him the rank of major and the decorations of the Military Cross and the Croix de Guerre.

As a co-opted member of the Council of the L.M.P.A., Mr. Clowes has been a very active worker on behalf of the Association. He has for long held the important post of chairman of the Labour Committee, as well as serving on several sub-committees. He is also one of the L.M.P.A. representatives on the London District Committee of the Joint Industrial Council and is a London representative upon the Federation Council. Thus he has an inside knowledge of the Association's working, and in electing Mr. Maurice Clowes as their new president the Council appear to have made a happy and popular choice.

MESSRS. C. H. ROGERS AND SONS, of Scotland-passage, High-street, Birmingham, have been appointed Birmingham and district agents for the Heidelberg automatic platen, and the "Exquisit" cylinder press. We understand the firm is also open to consider other agencies for English or Continental machines appertaining to printing.

AN exceptionally handsome piece of publicity literature reaches us in the form of a brochure entitled "Printing Efficiency" issued by the Baker Sales Co., of 23, Farringdon-avenue, E.C.4, and of New York. Equipments of printing offices, particularly composing-rooms, are the speciality of this company, and in this booklet will be found much interesting information, handsomely illustrated with views of famous printeries as well as of details of their equipments.

Trade Notes.

DISSOLUTION is announced of the partnership between William Gordon Higham and Bert Charles Roff, printers and stationers, 109, Colmore row, Birmingham; also of that between B. Feldman and A. L. Mocatta, music publishers, 125, 127 and 129, Shaftesbury-avenue, London, W.C.2, under the style of B. Feldman and Co.

ALLIED NORTHERN NEWSPAPERS, LTD.—Subscriptions were accepted on Monday for an issue in connection with this company of £2,300,000 6½ per cent. first mortgage guaranteed debenture stock at 98½ per cent., forming part of an authorised amount of £3,000,000. The company has been formed to acquire the whole of the share capital of Associated Scottish Newspapers, the whole of the ordinary share capital of J. M. Smith, Ltd., 85 per cent. of the share capital of Newcastle Newspapers, Ltd., which company has recently acquired the assets of the *Newcastle Chronicle*, Ltd., and also an issue of £800,000 of 6½ per cent. redeemable second debentures creating a floating charge on the undertaking and assets of Newcastle Newspapers, Ltd. The issue was quickly over-subscribed.

AT the ordinary general meeting of the shareholders of the Associated Newspapers, Ltd., held on Tuesday in London, approval was given to the report and accounts. It was stated that the company has had a satisfactory year, and is able to report a profit of £917,046 4s. 8d. After paying dividends on the preference and ordinary shares and 40 per cent. on the deferred shares there has been added £100,000 to the reserve fund. The carry-forward is £215,947 1s. 2d.

BOX FACTORY FIRE.—Considerable damage is reported to have been done by a fire which broke out between 9 and 10 o'clock on Monday night at Cairn's cardboard box factory in Middlesex-street, London, E. In a short time eight engines and a large bodyof firemen were on the scene. The origin of the outbreak appeared to be in the basement of the building.

THE Glasgow office of the *Scotsman* has been transferred to larger premises in Gordon-street.

THE *Wisbech Standard* has moved into new and more convenient offices at the New Quay, Wisbech.

THE *Birmingham Weekly Post* celebrates its 100th birthday by publishing an attractive souvenir number.

TO CELEBRATE the 70th anniversary of its first issue, the *Sheffield Daily Telegraph* has issued a souvenir brochure, which gives a most interesting and well-illustrated account of the rise of the paper from its inception to its present position.

THE *Retford, Worksop, Isle of Axholme and Gainsborough News* has just completed its 70th year of existence, having been founded in 1855 by the late Mr. William Hargrave Caldicott. The celebration of the birthday has been marked by the opening of new offices, and the newspaper devoted a page to the story of the progress of the enterprise, giving also portraits of many of the most prominent persons connected with the *News*.

AT the Mansion House, on Monday, Alfred Young (25), motor driver, and Walter O'Reilley (28), labourer, were remanded on bail on a charge of assaulting Mr. George T. Bevan, chairman of the National Society of Operative Printers and Assistants, with intent to steal. It was stated that Mr. Bevan as Father of the Chapel at the *News of the World*, had a sum of £30 in his possession when he was attacked in Ludgate-circus at 10 o'clock on Saturday night. He called for assistance, and three policemen jumped on to an omnibus and arrested the men, who had boarded it. Mr. Bevan was badly cut over the eye. An adjournment was arranged so that the men might be legally represented.

MR. JOHN JONES, Carnarvon, retired newspaper proprietor, left £5,475.

MR. HENRY ARMITAGE (65), of Thorner, Yorkshire, printer and lithographer, a director of Messrs. Jowett and Sowry, Ltd., Leeds, left £28,614.

MAJOR CHARLES ALFRED CUTHBERT KEESON, V.D., West Hampstead, printer and journalist, of Messrs. Jackson, Ruston, and Keeson, Ltd., proprietors of the *Pawnbrokers' Gazette* (of which he was editor for some years), who died in April, aged 67 years, left estate of the gross value of £28,235, with net personalty £24,553.

Personal.

THE Rt. Hon. C. W. Bowerman, M.P., as representing the Printing and Kindred Trades' Federation, will accompany the United Kingdom delegates to the conference of the Empire Press Union in Australia.

MOST of the United Kingdom delegates, who will be headed by Viscount and Viscountess Burnham, will leave this country about the middle of July and will be absent for several months.

MR. RONALD MCNEILL, M.P., Under-Secretary of State for Foreign Affairs, is to preside to day (Thursday) at a luncheon given by friends in London Press circles to Mr. W. Dallas Ross, the well known journalist, proprietor of *Golfing* and *Ladies' Golf*.

MR. LINTS SMITH, manager of *The Times*, and Mr. William Will, managing director of the *Daily Graphic* publications, are acting as joint secretaries for the luncheon.

SIR ROBERT BAIRD, K.B.E., D.L., the proprietor of the *Belfast Telegraph*, has been elected president of the Ulster Advertising Club.

COL. CHAS. CLIFFORD, C.M.G., V.D., T.D., J.P., of the *Sheffield Telegraph*, has been appointed a K.B.E. for political and public services in Sheffield. Rumour has it that Sir Charles may become closely identified with the papermaking industry.

SIR RICHARD TERRY has retired from the editorship of the *Musical News and Herald*, and has been succeeded by Mr. H. S. Gordon, who has been acting as sub editor.

SIR J. T. D. LLEWELLYN, the chairman of directors of the *South Wales Daily Post*, has just celebrated his 89th birthday.

SIR HERBERT MORGAN, the well-known advertising expert, has been elected a member of the board of directors of Lever Brothers.

SIR ALBERT SPICER, BART., fresh from his Eastern tour, Mr. Deputy J. R. Brough, Mr. W. C. Corke, C.C., and Mr. J. Crowlesmith, J.P., on Monday attended a luncheon given at the Cannon-street Hotel by the National Commercial Temperance League, Sir George Paish being the chief guest.

MR. EDMUND G. COLE, ex-president of the South-west London Master Printers' Association, was married on Tuesday to Florence Della Weir, at the Wesleyan Methodist Church, Bromley. The honeymoon is to be spent in South Devon.

MR. A. C. HANSON, has been elected president of the Oldham Master Printers' Association for the ensuing twelve months, with Mr. J. Bagot vice president, Mr. S. G. Halbert secretary, Mr. R. Wilson treasurer and Mr. J. Schofield auditor.

VISCOUNTESS BURNHAM, as president of the Society, received the guests at a "house warming" held on Monday afternoon to enable the council and members of the Society of Women Journalists to show their friends the charming club room that has been placed at their disposal through the generosity of the gas exhibit at the British Empire Exhibition.

MR. WILLIAM HAEDRICH, of Wm. Haedrich and Sons, Inc., 325, Gold-street, Brooklyn, with Mrs. Haedrich, is visiting Europe, to return about July 20th. In London Mr. and Mrs. Haedrich will meet their daughter who has just completed a tour of the world.

MR. B. J. SANSOM, bookbinding instructor at the London School of Printing, delivered an interesting lecture to a well-attended meeting of the Printing, Bookbinding and Kindred Trades Overseers' Association on Tuesday at St. Bride Institute. Mr. Sansom dealt particularly with the training of the apprentice in the bindery.

MR. B. W. TIBBLE, of Canonbury, who figured in the Birthday Honours List as a recipient of the medal of the Civil Division of the Order of the British Empire, is a guillotine cutter in a printing works.

Printers' Sports Meeting.

Annual Gathering of the Printing and Allied Trades Charity Sports Association.

Excellent weather favoured the 30th annual athletic gathering of the Printing and Allied Trades Charity Sports Association, which was held on Saturday at the Herne Hill track, Burbage-road, S.E. In spite of many counter attractions of a similar kind, there was a large attendance, and the diversified programme presented was of a thoroughly enjoyable kind. Whilst keen attention was given to the various trade and open events, the importance of the social aspect of the gathering was not lost sight of. As illustrating the generous manner in which this annual event is regarded, it may be mentioned that the prizes and the working expenses of the meeting were met by donations of numerous friends and voluntary work by those connected with the industry, thus enabling the whole of the receipts to be distributed amongst the various trade charities.

Brig.-General W. F. Mildren, C.B., C.M.G., D.S.O., who distributed the prizes, is this year's president of the Association. (A few biographical particulars are appended to this report.) He was warmly received by a number of members of the committee on his arrival. Those present included a great many representatives of the printing and allied trades.

Besides the customary trade events, which were competed for in a thoroughly sportsmanlike and friendly manner, there were a number of open events, which were of an extraordinarily interesting kind. Amongst these was a cycle race, in which Chas. H. Bartlett (Polytechnic C.C.) set up a new amateur motor-paced record in a five-mile race with H. Oxley (Kentish Wheelers).

Trade Results.

The scoring in the Fryotype Championship was extremely close, it being not until the last race that Waterlow's succeeded in winning the trophy, with the Amalgamated Press as runners-up, and W. H. Smith finishing third. The other trade results were as follows:—

100 yds. Fryotype Championship.—Heat Winners: C. Wilkinson (Waterlow and Sons), J. A. Slough (Temple Press), H. Baird (Waterlow and Sons). Final: J. A. Slough, 1; C. Wilkinson, 2; H. Bard, 3.

880 yds. Fryotype Championship.—Heat 1: W. J. Collins (*The Times*), 1; E. Reddie (W. H. Smith and Sons), 2; W. O. Pearson (Waterlow and Sons), 3. Heat 2: F. J. Walker (W. H. Smith and Sons), 1; A. G. Smith (Amalgamated Press), 2; G. Johnson (*The Times*), 3. Final: F. J. Walker, 1; A. G. Smith, 2; E. Reddie, 3.

220 yds. *Daily Chronicle* Handicap.—Heat 1: J. A. Slough (Herne-hill H.), 1; H. W. Hobbs (unattached), 2. Heat 2: A. L. Tewtnell (Ilford A.C.), 1; C. E. E. Pearce (Surrey A.C.), 2. Heat 3: R. S. Hall (Highgate H.), 1; R. W. Cowell (A.P.A.), 2. Heat 4: H. J. Bard (Waterlow's A.C.), 1; W. C. Deverell (Amalgamated Press), 2. Final: H. J. Bard, 1; H. W. Hobbs, 2; W. C. Deverell, 3.

One Mile Fryotype Championship.—A. J. Smith (Amalgamated Press), 1; R. S. Chisholm (Waterlow and Sons), 2; W. W. Philp (Waterlow and Sons), 3.

Fryotype One Mile Walk.—F. Creasey (Mansell, Hunt and Catty), 1; F. G. Easto (*The Times*), 2; H. V. L. Ross (*Daily Mail*), 3.

Two Mile Linotype Team Scratch Race.—Waterlow and Sons (R. S. Chisholm, W. W. Philp, G. Pooley), 1; Harmsworth (F. Horslin, L. Church, P. Bevan), 2; Amalgamated Press (A. J. Smith, F. Baker, C. Harrison), 3.

"Braddick" Challenge Shield (Trade Societies Relay).—N.U.P.B.M.R. and Paper Workers, 1; Natsopa (*Daily Mirror*), 2.

Novelty Relay Race.—*The Times* A., 1; Waterlow and Sons, 2; *Daily Mail*, 3.

80 yds. Ladies (Trade) Handicap.—Final: H. R. Wright (Manor Park A.C.), 1; D. Austin (N.V.P.B.), 2; D. Garrett (Cornwall Press), 3.

Tug-of-War.—Semi-final: Edward Lloyd, Ltd., beat W. H. Smith and Sons by 2 pulls to 0. Final: Royal Mills beat Edward Lloyd, Ltd., by 2 pulls to 0.

A detachment of No. 68 (City of London) Division (Printers' Own) St. John's Ambulance Brigade was on the ground, and rendered first aid service on several occasions, whilst the London Central Branch Band (Paper Workers), under the conductorship of Mr. Alf. Hodgkiss gave many acceptable musical items.

A Vote of Thanks.

During a pause in the programme Mr. J. Wakeham, in proposing a vote of thanks to Brigadier-General Mildren for presiding and

Brig.-Gen. W. F. Mildren, C.B., C.M.G., D.S.O.

distributing the prizes, congratulated the president on the fact that the gathering that afternoon was the largest since 1914, and also that the receipts were the highest since that year. The success of the event, he said, was made possible partly by the very generous contribution General Mildren himself had made, and by the influence he had exerted in giving the function due prominence in trade circles. They all remembered his distinguished services in the War, and were indeed very grateful for the part he had played in making that afternoon's meeting such an unqualified success.

General Mildren, in returning thanks, said that as a result of that afternoon's efforts they would be able to complete the H. F. Parker Pension. One of the most pleasing features of the proceedings, he continued, had been the outstanding sociability observable at the gathering. For some years that annual athletic meeting had been regarded in a rather perfunctory way and he was glad it had got back in its character to something like pre-war days. This feature, he believed, augured well for the future of the Association, and he hoped it would go on making records. He paid a tribute to the efforts of Mr. H. F. Parker and his committee, and concluded by expressing the thanks of all present for the excellent exhibition of sport given by the various competitors.

General Mildren is a director of the Amalgamated Press (1922) Ltd., of the Imperial Paper Mills, Ltd., and of the Empire Printing Ink Co., Ltd., and has had a long and close connection with the printing and allied trades.

He is Hon. Colonel of the 6th City of London Rifles, and served throughout the war. During the early period he commanded the 1st Battalion of the 6th City of London Rifles, and from 1917 to May, 1919, the 141st Infantry Brigade, 47th (London) Division. He was awarded the C.B., C.M.G., D.S.O., Croix de Guerre, as well as other distinctions, and was seven times mentioned in dispatches.

During a period of years he has done much to improve the conditions of the workers in the businesses with which he is connected, and in this way has set an example which has undoubtedly contributed to the welfare of the London Printing Trade.

Machine Compositors' Vigilance Association.

At the quarterly meeting of the Machine Compositors' Vigilance Asssociation, held on Friday evening, June 5th, in the Reading Room of the London Society of Compositors, St. Bride-street, E.C., Mr. J. F. D. Dixon (chairman of the Association) presiding, the report of the committee for the period January 16th to May 30th was read by Mr. A. Henwood (secretary). It was stated that the membership had increased by 23, bringing the total to 1,097, including 771 linotype and 257 monotype operators, with 51 linotype and 18 monotype honorary members. Income reached the sum of £169 (subscriptions £161), and expenditure £187 (sick benefit £89, donation to Pension Fund £34). This donation, while it completed Pension No. 1, was responsible for the £18 deficit on the period.

Attention was called to the notice of motion by the committee to increase the sick benefit, the necessary alteration of rule being down for consideration at the next quarterly meeting. The report closed with the reading of correspondence conveying fraternal greetings from members in Australia, Wellington (N.Z.), Johannesburg and British Honduras.

The Association's Pension Fund report placed on record the appreciation of the committee of the generous action of the directors of the composing machine firms in giving assistance in the printing for the annual dinner in February last. It was recorded that one of the members of the Association had, with the assistance of the votes at the disposal of the Fund, been successful at the first application at the recent election of the Printers' Pension Corporation.

A lively conversation followed the reading of the reports. Various points connected with the working of the piece scales were touched upon, the committee being instructed to institute inquiries and take action where it was considered desirable.

The Typographical Association.

Triennial Conference.

The triennial conference of the Typographical Association opened at Lowestoft on Monday, when some 300 delegates were welcomed by the Mayor, Councillor J. M. Barnard.

Members of the Typographical Association have, since October, 1921, lost, through wage reductions, the collossal figure of £3,500,000, said Mr. J. D. French, in his presidential address to the conference on Tuesday. The individual loss per member up to date was roughly £150.

"I am wondering," said Mr. French, "if the time is not rapidly approaching when we should ask our employers for a revision of our wages agreement, with a view to having returned to us that which, in our opinion, was unjustly taken from us."

Discussing relations with other unions, Mr. French regretted the refusal of the London Society of Compositors (upheld by the General Council of the Trades Union Congress) to recognise the membership cards of the T.A. This had led to the reinstitution of the London branch of the Association.

Some progress had been made on the question of amalgamation.

Trade Union Matters.

L.S.C. UNEMPLOYMENT.—According to the June issue of the *L.T.J.*, the number of members of the London Society of Compositors signing the unemployment book on May 23rd represented 313, a figure which compares with 362 in the preceding week, 424 for May 9th, and 460 for May 2nd. The figures for the month just completed indicate a satisfactory improvement when compared with the corresponding month of last year and the year before, the weekly average of unemployed standing at 479 in May last year and 753 in the four recorded weeks of May, 1923.

TRAINING OF APPRENTICES.—The secretary of the Ipswich branch of the Typographical Association has forwarded to the Executive Council a suggested syllabus drawn up by the Ipswich School of Arts and Crafts for the training of apprentices in printing. The local Education Committee wished to know if the syllabus would meet the apprenticeship requirements of the Association. The president of the Ipswich branch was a member of the Education Committee, and he had secured a promise that only boys who were guaranteed situations as vacancies occurred would be accepted in the classes. The Executive Council, after consideration of the position, have intimated that they cannot accept the scheme unless it applies only to apprentices who are already engaged in the printing trade.

COMPENSATION CASE AT HYDE.—The secretary of the Hyde branch of the Typographical Association has reported to the Executive Council that the solicitor acting in the compensation claim by a member in that branch had received an offer by the insurance of £75 and all expenses. The Executive Council have advised the branch secretary to instruct the solicitor to press for a larger amount.

NEW COLOUR PRINT PROCESS.—The officials of Smithsonian Institution gave a demonstration of a new and perfected process of colour printing at the press of William E. Rudge in Mount Vernon, New York. It was said by those present that the reproduction by this new process cannot be distinguished from the original. The printing is done on rough surface rag paper. The process is an adaptation of the three-colour process, and special waterproof inks are used. The printing is done while the paper is still damp.—*Publishers' Weekly* (New York).

LONDON CHAMBER OF COMMERCE. — The 43rd annual report of the Council contains a wealth of information in its 185 pages of letterpress. The activities of the Chamber are numerous and practical and this record of last year's proceedings, which was adopted at the meeting on May 13th, has been carefully prepared. An interesting chart is included showing the various organisations associated with the Chamber, while there is a useful and full index. The Paper and Bookbinding Sections continue to do useful work, one of the recent developments being the formation of the Paper Exporters' Group.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6
Three Insertions	3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders, Patents for Sale, Legal and Financial Announcements.

Per line	1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58 Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Conference for Master Printers' Sons.

THE Home Counties Master Printers' Alliance has already made a name for itself as a source of enlivening ideas, its energetic and informative efforts in the direction of more accurate estimating having reverberated throughout the industry. It is now making preparations for a very interesting new departure which we think is likely to be highly successful and to be copied by other Alliances up and down the country. It will be remembered that at the recent annual meeting of the Home Counties Alliance, a suggestion was mooted that something in the nature of a summer school for printers might be arranged later in the year. There has now come into our hands an attractively produced brochure which sets forth a provisional programme for a "Five Day Conference for Master Printers' Sons and Young Master Printers." The Conference is to be held from Monday, September 14th, to Friday, September 18th, at Old Jordans Hostel, Beaconsfield, Bucks.

* * *

An Attractive Programme.

A FOREWORD to this brochure is provided by Mr. W. Howard Hazell, president of the Federation of Master Printers, who, in wishing success to the Conference, remarks: "Some persons consider that the 'school of experience' is the best school in which to learn. It is a slow and expensive way of acquiring knowledge, as only after years of failure and success can knowledge be obtained. At the Conference, men who are well-known experts, will speak on their special subjects, and help the young printers to understand the many problems they will have to deal with, and show them how to avoid some of the pitfalls that lie in the path of every master printer. A master printer who is *only* a printer, cannot succeed. He must also be a good man of business, a salesman, an organiser, know something of the Federation and its work, and the relations of capital and labour. These are the subjects that will be discussed." That these subjects will be discussed in interesting and informative fashion seems plain from a glance through the five-days programme. The nature and purpose of the Conference will be explained at the outset by Mr. Harry H. Potts, president of the Home Counties Alliance. The Alliance secretary, Mr. Percy D. Michael, will speak on "Employers and Employees—The Two Parts." Mr. Oscar V. Viney, Alliance vice-president, will treat the subject of "Printing Works," including such important matters as the selection of plant and employees. "Costing and Success in Business" and "Selling the Goods" will be dealt with by Mr. Howard Hazell and Mr. R. M. Smale respectively, whilst Mr. A. Williamson, Federation costing secretary, will lead discussion on these subjects. "The Trade Union Movement" will be expounded by Mr. A. E. Goodwin, secretary of the Federation, and Mr. G. A. Isaacs, general secretary of the National Society of Operative Printers and Assistants, whilst there will also be a "Labour Conference," the two sides of which will be composed of members of the Conference led by Mr. Goodwin and Mr. Isaacs respectively. The programme will include visits to Croxley Paper Mills (by invitation of Messrs. John Dickinson and Co., Ltd), to the Printing Works, Aylesbury (by invitation of Messrs. Hazell, Watson and Viney, Ltd.), to the Oxford University Colleges and to the Oxford University Press. We are not surprised to hear that the Home Counties Master Printers' Alliance is receiving applications from sons of master printers not belonging to this Alliance, but first opportunity of booking the limited accommodation available is naturally offered to those who are so fortunate as to be connected with the H.C.M.P.A.

* * *

The Holiday Interruption.

WITH the Whit-week holiday break there has come the usual interruption of trade and an excuse for the many buyers who wish to change the reason for having no business to place. Northern houses feel the effect of Whitsuntide more than those in the South; and in the North Lancashire makes more of the week as a holiday than Yorkshire. Particularly in Manchester there is a growing tendency to shut down works and offices for almost the whole week. The agreement in force in the printing and allied trades makes it compulsory for employers to grant a full week's holiday on full pay; hence the choice of Whitweek so far as Manchester is concerned, because that is the most convenient period for a suspension of business.

* * *

Paper Trade Complaint.

THERE is a considerable amount of complaint in the paper trade, and in some quarters a very pessimistic outlook is being taken. It is claimed that the current year's trading so far has shown no improvement over the corresponding period last year. The contention is partly supported by the Board of Trade Returns, which yield very little satisfaction when the increased export of news-print to Australia is deducted. Without Australian trade there would be little hope for the news print section, whereas under the advantage of a preferential tariff we have a very firm control over the market. Leaving out of account this feature of our paper exports, it is apparent that the condition of our paper export trade is unhealthy.

Improved Equipment.

VERY little progress has been made in any other section; and although the figures may stand comparison in some respects with those of pre-war years, it has to be remembered that we are better equipped as a papermaking nation than ever before. Our capacity to produce output has been infinitely widened by the installation of new equipment and the additions or improvements to plant all over the country.

London Master Printers' Association.

The Annual Meeting.

Mr. Alfred Langley, the retiring president, occupied the chair at the annual general meeting of the London Master Printers' Association, held at Stationers' Hall on Friday at noon. He was supported by Mr. Maurice Clowes (president-elect), Mr. W. Howard Hazell, J.P., Mr. J. H. Williams (treasurer) and Mr. W. Whyte (secretary). The L.M.P.A. Council was present in full force, but there was only a meagre attendance of the general membership—a fact that usually means that things are working harmoniously.

Report for 1924-25.

The secretary having read the notice convening the meeting, Mr. Langley introduced the annual report, which was already in members' hands. The report put on record a year of stabilisation of wages, and proceeded to recall the recent strike in the binding section of the trade, in respect of which grateful appreciation was expressed of the work of Colonel Fletcher and the Federation Negotiating Committee, the Conciliation Committee of the J.I.C., and Mr. Maurice Clowes. The report indicated that the continued handicap of high postal rates and competition in many forms had made it extremely difficult for many members to maintain their businesses. In this connection reference was made to the Federation Collective Advertising Scheme, and the hope was expressed that more members would join in this great co-operative effort. Indication was made of useful activities on the part of the District Associations and the Trade Sections. The report proceeded to mention that the Association, as a result of the last General Election, continues to be well represented in the House of Commons, the present representatives being Sir G. Rowland Blades, Sir Edward M. Iliffe, Colonel W. Grant Morden and Mr. E. E. Alexander. Very cordial reference was made to the fact that the L.M.P.A. was honoured by the Federation in the election of Mr. W. Howard Hazell, J.P., as vice president, and that at the recent annual meeting at Buxton Mr. Hazell accepted the presidency of the Federation. Eighty-three names have been added to the list of members since the last annual report, the total membership of the Association at the end of the year, after deletions owing to lapsed subscriptions, resignations, etc., being 1,102.

Work Done and to Do.

Moving from the chair the adoption of the report, Mr. Langley emphasised, amid applause, the cordial references to Mr. W. Howard Hazell, Colonel Fletcher and Mr. Maurice Clowes. He referred to the recent Inter-District Competition, and expressed the hope that in future the competition would become an annual event and be increasingly useful in evoking the friendly rivalry of members. In regard to standardisation of paper—in which, said Mr. Langley, Mr. Howard Hazell had taken such a prominent part—it was interesting to note that over 400 members of the London Alliance had supported the scheme put forward.

Mr. R. S. Herries seconded, and the motion was carried unanimously.

The treasurer, Mr. J. H. Williams, next presented the financial statement, and moved its adoption. It showed a strong financial position, though there was a small deficit on the year's working, due, the treasurer explained, to the fact that the whole of the expenses of the removal of headquarters to Old Bailey had been reckoned in last year's account. Mr. Williams, in the course of his remarks, drew attention to the existence of the benevolent fund, and moved that a further £50 be allocated to this fund in order that it might not suffer on account of the deficit balance.

The treasurer's composite motion was seconded by Mr. Lely, and carried *nem con.*

On the motion of the treasurer, the meeting agreed that the subscription be the same as last year. Mr. Searle, in seconding this motion, said he thought the L.M.P.A. subscription was one of the finest investments a printer could make.

Messrs. Roberts, Wright and Co. were re-elected auditors.

Honorary Membership Inaugurated.

Mr. Howard Hazell moved the adoption of the following as a new rule of the Association:

"Master printers who have retired from active work and other persons who have rendered distinguished service to the printing and allied trades may be elected as honorary members of the London Master Printers' Association. Honorary members shall be entitled to attend the social functions of the London Master Printers' Association and the annual general meetings of the L.M.P.A. and the Federation (but they may not vote), but they shall not be eligible for election to any council or committee of the Association. The Council of the London Master Printers' Association may co-opt any honorary member to the Council or any committee of the Association, and he shall be entitled to vote at the meetings thereof. Honorary members shall not receive any of the other benefits or incur any of the other responsibilities of ordinary membership. The Council of the London Master Printers' Association shall decide which names (if any) shall be submitted to the Association for election as honorary members at the annual general meeting of the Association."

Mr. Hazell intimated that it was the wish of the Council that the Association should have the power to confer some proof of appreciation of distinguished services rendered by those not qualified for membership.

Mr. H. B. Cahusac seconded, and the new rule was carried.

Mr. Hazell next proposed two names for election to honorary membership. The first was that of Mr. C. T. Jacobi, who, he said, had done very distinguished work by the writing of a number of books on printing, had for long interested himself in technical education and had acted as juror at several international exhibitions. The second was that of Mr. J. R. Riddell, whose name as a leader in technical education was known, said Mr. Hazell, throughout this country, on the Continent and in America.

Mr. Langley seconded this proposition, which was carried *nem con.*

Mr. Maurice Clowes proposed a vote of thanks to Mr. Langley for his services as president of the Association. He recalled that Mr. Langley's combined period of s rvice as vice-president and president was a longer one than that of any one previously. Mr. Langley had had a strenuous time, but the London Master Printers' Association was stronger now than when he accepted office.

Mr. Hazell seconded, bearing personal testimony to the hard work and ability with which Mr. Langley had served the Alliance and the members, adding prestige to the position he had occupied.

The motion being passed with enthusiasm, Mr. Langley briefly responded, and in the course of his remarks urged that members should give all possible support to the Association next year when London would act as host on the occasion of the Federation's annual meeting. The place of meeting, he said, had not yet been decided, but it would not be London.

Note Forging Plant Seized.

The discovery of a large quantity of apparatus suspected by the police of having been used for forgery purposes had a sequel at Old-street Police Court on Saturday, when William Henry Harrison, aged 40, an engineer, was charged with (amongst other things) "having in his possession at a house in Earl's Court-road, S.W., a printing press, photographic apparatus, arc lamps, acids, paper, zinc plates, and other materials for the purpose of printing forged Post Office British money orders and advices." Harrison was remanded, it being stated that the whole of the facts are being placed before the Director of Public Prosecutions.

It took the police 3½ hours to dismantle the apparatus, which weighed nearly four tons. The property conveyed to Scotland Yard included: Four etching machines, two clamp presses, a 4 ft. camera on sliding rails, an ultra-violet ray lantern, a 4 ft. porcelain bath containing acids, a quantity of metal sheets, two block-making machines, an electrical etching apparatus, a huge quantity of sensitised paper, 200 packets of photographic plates, sheets of blotting paper containing impressions of money orders and bank notes.

Falsifying of cheques appears to have been carried on as well as forging of money orders, etc., and for the dual purpose half-a-ton of specially prepared paper had been obtained, with chemicals which were new to the experience of the officers engaged in the investigation.

DIVIDENDS AND REPORTS.

HAZELL, WATSON AND VINEY.—Net profit for year ended March 31st, 1925, is £61,266, plus £19,249 brought in. Debenture interest took £285. Preference dividend £4,650, and directors propose final dividend, free of tax, on ordinary shares, of 7 per cent., making 10 per cent. for year, plus bonus of 5s. per £10 share, and 7 per cent., making 10 per cent. for year; and bonus of 6d. per share on employees' ordinary £1 shares, transferring £17,000 to general reserve, making it £77,000, which added to premium reserve £10,568 will bring total reserve up to £87,568. Balance carried forward is £23,296. (Previous year's net profit £44,556; dividend 10 per cent. without bonus).

GEORGE NEWNES.—Report for year ended March 31st, 1925, states that profit, after providing for all necessary reserves for depreciation, etc., was £99,962; £36,953 was brought in. Directors recommend final dividend on ordinary shares at rate of 7½ per cent., making 15 per cent. for year, also a bonus of 10 per cent., to transfer to employees' sick and pension fund £10,000, to staff bonus £5,000, to general reserve £10,000, and to carry forward £36,916. (Profit last year, £84,481; dividend, 15 per cent., plus bonus of 5 per cent.)

ALBERT E. REED AND CO., LTD.—Report for year ended March 31st, 1925, states that after providing for depreciation, interest on debentures, etc., writing off £8,000 from debenture issue expenses, and deducting interim dividend on preference and ordinary shares, there remains available £63,184. Directors propose placing to reserve £5,000, final dividend of 7½ per cent. on ordinary shares, making 10 per cent. for year, and after providing for preference dividend carrying forward £33,509.

SPICERS, LTD.—The accounts for the year ended March 31st disclose a net profit of £69,036 (against £50,614 in the preceding year), while £71,035 was brought forward. In addition to the preference dividend, a dividend of 4 per cent. is being paid for the year on the ordinary shares (against 2½ per cent.), and the expenses arising out of the amalgamation with James Spicer and Sons, amounting to £8,573, are to be written off, together with the premium on redemption of eight per cent. notes amounting to £2,786. A balance of £76,211 is carried forward. It is stated that the general conditions of the paper industry are still unsatisfactory, and that it is impossible to see when there will be an improvement.

NEW COMPANIES.

CHARLES SEVER, LTD.—Capital £50,000, in £1 shares; to acquire the business of general printers carried on in Manchester as "Charles Sever," to adopt an agreement with W. M. Sever, and to carry on the said business and that of stationers, electrotypers, photographic printers and photo lithographers, die sinkers, envelope manufacturers, paper bag makers, etc. Private company. South-West London M.P.A.

Congratulations to Mr. R. B. Simnett on his Election as Vice-President of the Parent Association.

Whole-hearted congratulations were showered upon Mr. R. B. Simnett at the meeting on Thursday, June 4th, of the South-West London Master Printers' Association. The appointment has given the utmost pleasure to the whole of the district associations, and the manner in which the news has been received in all quarters is a tribute to the position which Mr. Simnett occupies, not only in his own area, but throughout the whole of London. Messages of good will were received from Mr. Weir, Mr. Young, Mr. Mountain and Mr. Langley, all of whom expressed the view that the election of Mr. Simnett was an honour to the district association. Mr. Langley observed that the local organisation deserved congratulation on producing the future president of the parent body.

After the reading of correspondence, Mr. Tacey voiced the feelings of the whole of the members, when he expressed the pleasure which they all felt on learning of the honour conferred upon Mr. Simnett. It was the first time, he mentioned, that any one had taken such high office in the L.M.P.A. from the South-West. It was particularly gratifying that the outer districts were getting their share of representation at headquarters. There was no question Mr. Simnett would represent them efficiently. Mr. Tacey moved a formal resolution of congratulation to their president.

This was seconded by Mr. E. G. Luckins and cordially carried.

Mr. Simnett, who was very warmly received, made his acknowledgments of the great kindness which had been shown to him. He felt their expressions were given in all sincerity and that anything that he might be able to do for the parent association would be reflected to the credit of this South-West District. The speaker was particularly gratified at the attendance of representatives from other areas, including Mr. Langley (the president of the L.M.P.A. during the past year).

At the close of the meeting, the business proceedings of which are reported in another column, Mr. Simnett was invited to take supper with the members in honour of his election as vice president of the parent association. It was appropriate that Mr. T. J. Mountain, the first president of the South-West, should preside.

It was a pleasant, informal gathering, which fully indicated the high regard entertained for Mr. Simnett. At the conclusion of the meal, and after the loyal toasts had been honoured, the chairman proposed the health of Mr. Simnett. He expressed his own conviction that in electing Mr. Simnett as vice-president of the parent association a move had been made in the right direction. Mr. Mountain closed a warm eulogy to Mr. Simnett's services to the printing industry by asking the company to drink his health.

The toast was accorded musical honours, followed by cheers.

Mr. Simnett, in reply, said it was gratifying to him to feel that not only in the South-West Association, but in all the associations of London, he had some very real friends. They had shown to him very great and remarkable good fellowship and kindness which he should ever remember. He believed that if one performed one's little part in life, with the single idea of living up to the highest ideal, they would be able to say of him, "Well he did his best in the sphere in which he laboured." (Hear, hear). That had been his one aim in life; and if he could realise it he should be only too thankful. Mr. Simnett added that he had at least achieved a certain amount of notoriety, since a well-known firm of photographers asked him to give them a sitting in order that his photograph might be included in their record of "notable personalities." (Laughter and applause). The speaker concluded by expressing the hope that he might be able to render some assistance to the craft in the office to which he had been elected.

Mr. F. E. Tacey, in proposing the toast of "The Visitors," expressed the hope that members of the South-West District would visit other areas, because it was impossible to exaggerate the pleasure and profit which resulted from such visits.

Mr. A. Langley, replying to the toast, said it had been not only a privilege, but a duty, to attend there that night in order to congratulate London's coming president, Mr. Simnett, on his election as vice president of the parent association, and at the same time to congratulate the South-West Association on his appointment to that high office. Mr. Simnett had been elected on his merits and because the London Association knew that in appointing him vice-president they were getting a man who had shown a keen interest in the uplifting of the craft. The high ideal of the Association was to raise the craft to such a level that it would produce better men and better printers. Mr. Simnett was a man of high ideals and had the faculty for expressing them and showing others the way to carry them out. Paying a tribute to the high esteem in which Mr. Simnett was held on the Council of the parent association, Mr. Langley said they looked forward to a great advance in the state of the trade and of the craft in the years during which Mr. Simnett had a greater share in their deliberations. (Applause.)

The concluding toast was that of "The Chairman," in proposing which Mr. Spring paid a warm tribute to Mr. Mountain, and that gentleman's reply concluded the informal proceedings.

On the day following the supper, Mr. F. H. Cole, the hon. secretary of the South-West Association, received a letter from Mr Simnett expressing his warm appreciation of the good fellowship and kindness shown to him. It was all so overwhelming and unexpected that Mr. Simnett was afraid he had said very, very inadequately what he really felt. One thing stood out prominently above the rest, and that was that he was amongst real friends who were really pleased and gratified that one of their number had been chosen for promotion in the interests of the craft. It was one of the true tests of comradeship that rarely came in one's experience. If that beginning was an anticipation of what the next two years would mean to him, it would lighten the burden of a very heavy task in no small degree.

Uplifting the Printing Craft.

Thoughts on Buxton and the Exhibition.

At the monthly meeting of the South-West London Master Printers' Association, held at Clapham-junction on June 4th, Mr. R. B. Simnett, the president, and vice president of the parent association, inaugurated an interesting discussion following the impressions formed during the recent annual meetings of the Federation at Buxton and the Seventh International Printing Exhibition at Islington. He began by suggesting a slogan or motto for 1925 and 1926, "The love of work in our own individual businesses and the solidarity of our Association." (Applause.) He thought they could not adopt a better motto for the coming year. The impression he had brought away from Buxton was that of the strength and solidarity of the Federation of Master Printers. They met there some 600 strong; and while the social was an important and enjoyable side of the gatherings, they were able to learn something of the work which was being done by the various alliances throughout the country, all aiming to unite into one great whole the Federation as it now stood. At the same time he did not mean to suggest that the Federation was yet a perfect organisation, because there was much spade work to be done in order to take it to the height at which they wanted it and to get it to that collective strength which would make it a force felt throughout the trade in the country. The question that arose in his mind was how were the local associations and the parent association to become more closely knit together in order to make the Federation stronger and still more perfect.

Mr. Simnett went on to refer to the problem of drawing members to the monthly meetings. He thought there was something wrong somewhere when they could only get a quarter of their membership to attend. In that connection, he wanted to try to evolve some scheme which would make their meetings still more interesting, so that they would appeal to everyone.

Turning to the Exhibition, Mr. Simnett mentioned the large amount of modern machinery that was shown there. Reflecting on the men who had to work that machinery, he realised to some degree where the strength and benefit of their craft came in. The thing that impressed him more than anything else was the meeting of the Joint Industrial Council, in which, he thought, lay their great strength for the future development of the industry. If they could get that council to work to a greater degree of perfection, the vast majority of their difficulties and troubles might be avoided in the future. In that direction lay their great hope of getting closer together and bringing employer and employee to understand each other better and to realise each other's difficulties. He thought the problems of the industry could be best thrashed out by the various committees of the J.I.C.

Mr. Grubb, president of the South-East London Association, asked what would be the position of the industry at the end of the next 25 years. Personally he thought they were driving towards a cataclysm. If things developed as they were going, they would be up against something which would render it impossible for them to carry on. There were, however, indications in some directions that employers and employees were realising that the one salvation for industry in this country was to meet together on the basis that the interests of both sides were not antagonistic, but identical. There would only be hope for the industry in the degree in which they recognised that fact. There had to be mutual trust and mutual service.

Mr. Burt (West and North-West Association) spoke of the need of encouraging the smaller printers to join their associations. At the same time they wanted to raise the status of their craft, and they could not do that while they had some of the small people turning out such abominable work as sometimes appeared from the printing office. Reference was also made to the need for cleanliness. Again they had to strive to some extent for production, and the speaker thought that they wanted to pay men according to the quality of their work and not according to the hours put in. He thought there should be some grading in order that a man's ability might be recognised, and at the same time there should be some arrangement by which men on the books of the Society should be allowed to take what they were worth rather than be a drag on the funds of the Union and a nuisance when they got into the printing office. (Hear, hear).

Mr. Rangecroft, as a small printer, spoke of the benefit he derived from attendance at district meetings. Only good could come from people meeting together to discuss their common problems.

Mr. Mizen (North London) thought the past year had been one of the most useful in the history of the London Association, and made a particular reference to the Inter-District Competition. With regard to introducing new blood, he thought if the old members were to cease their activity he did not know what would become of the London Association.

Mr. Boyle (Central Districts) mentioned the larger attendance which afternoon committees returned as against evening meetings. Poor meetings were due to the neglect of members to arouse the interest of their neighbours in the affairs of the craft.

Mr. Langley thought they were all too pessimistic. (Hear, hear). Enthusiasts were always complaining of the apathy of the other people. So long as things went on satisfactorily there was a lack of interest from the outside members. As soon as trouble arose, then these laggards came forward and wanted to know what was wrong. He did not think they had any occasion to be despondent. The past year had certainly been one of outstanding importance and progress. On the whole, they had had a year practically of stabilisation. As to what the industry would be like in 25 years' time, Mr. Langley recalled the pessimistic feeling which prevailed as reflected in the proceedings of the forward movement of 1901. It was no good wondering what would be the conditions in 25 years' time. In spite of the rapid change in the previous quarter of a century, the printing trade had shown an adaptability which very few other trades had revealed. (Hear, hear). What they had to preserve in their Association was an elasticity of mind. If they trained their people and their thoughts to be adaptable, the future would take care of itself.

Mr. Spring described the Joint Industrial Council as one of the finest institutions that had been brought into the industry.

The president concluded the proceedings by intimating that the next meeting would be held in October.

Printers' War Orphan Fund.

Flag Day this Month.

The illustration on this page is a miniature of a picture that appears at the head of a striking lithographed poster that has been issued by the Joint Industrial Council of the Printing and Allied Trades to draw attention to this year's Flag Day in aid of the Printers' War Orphan Fund.

Help the Printers' War Orphans! Last Pay Day in June is Flag Day.

Nine hundred orphans of printers who fell in the Great War are still being supported by the Printers' Pension Corporation and it is to ensure the continuance of these grants until every child reaches the age of 14 that the J.I.C. is making a special effort to raise £6,000.

With the willing help of thousands of voluntary workers amongst employers and employees the J.I.C. raised £4,288 in 1923 and £4,235 in 1924.

It has been thought advisable to arrange for the sale of flags for the Fund on the last pay-day in June instead of September and flags will be available for this purpose.

To obtain the best result it has been found advisable to appoint someone in each establishment to be responsible for the arrangements to sell the flags in all departments and the organisers hope this suggestion will be generally adopted.

Requests for posters and flags will be welcomed by Mr. A. E. Goodwin (joint secretary, J.I.C.), 7-10, Old Bailey, E.C.4.

AMONG recent films illustrating British industries is one entitled "Making a book at the Oxford University Press."

LEEDS PRINTERS' SPORTS. — The annual sports gala promoted by the Leeds and District Printing and Kindred Trades will be held at the Headingley (Leeds) Athletic Grounds on Saturday, July 11th.

A PAIR of Baxter prints, portraits of Mr. and Mrs. Chubb, were sold on Thursday at Messrs Puttick and Simpson's for £700. Another print, "Butterflies," fetched £110. The buyer was Mr. Etheridge, of Birmingham.

ORDERING PROCESS BLOCKS.—From Messrs. Knighton and Cutts, Ltd., of London and Watford, there is sent to us a very neat pamphlet providing a schedule of minimum prices as adopted by the Federation of Master Process Engravers. A feature of this handsomely produced booklet is a thumb index enabling the user to turn quickly to any desired section, *e.g.*, line work on zinc, colour line work, half-tone on zinc, and so on. On the page or pages devoted to each class of block will be found an illustration or two to exemplify the particular process referred to, and lists of prices for blocks from minimum size up to 120 square inches. Particulars of incidental charges, etc., are also given. The pamphlet is most useful and convenient to the users of process blocks.

Printers at Advertising Convention.

The Collective Advertising Committee of the Federation of Master Printers has decided to take part in the British Advertising Convention at Harrogate, July 4th to 8th, 1925, and arrangements are being made for a special session on Monday afternoon, July 6th, which is likely to be of interest to advertisers and printers.

The programme for this session is not quite completed, but some tentative arrangements have been made. Mr. Alfred Langley (London) will preside and read a short paper on "Letterpress Posters for all Advertisers"; Mr. Geo. W. Jones (London) will speak on "Form and Colour in Advertising"; Mr. David Greenhill (Watford), on "Photogravure and Newer Printing Processes to Aid the Advertiser"; Mr. W. Sessions (York), on "Dressing the Goods, Better Labels, etc."; Mr. G F. Storey (Leeds), on "How to Improve the General Display of Goods—Cartons, Showcards, etc."; Mr. N. Hills Patterson (Sunderland), on "Calendars as an Advertising Medium."

A special session is also being arranged to consider the problems of direct mail advertising on Tuesday, July 7th, and Mr. J. Crowlesmith, London, and other members of the Federation will take part.

Stereotypers' Overseers' Achievement

Mr. W. Bullett, general secretary of the Electrotypers and Stereotypers Managers' and Overseers' Association, has secured another triumph on the bowling green. At the Open Bowling Tournament, held at Eastbourne during Whit week, Mr. Bullett and his partner (Mr. E. C. Roszak – a fellow member of the Cyphers' Bowling Club, Beckenham) carried off top honours in the pairs' competition. There were 188 competitors and the contest was open to the whole of the British Isles.

The value of the prizes awarded amounted to twelve guineas, viz., six guineas each player, and the winners hold for the year the "J. C. Towner" Challenge Cup (W. Bullett) and the "Angles" Challenge Cup (E. C. Roszak), each cup being of the value of thirty guineas.

THE Manchester Envelope Co., owing to the steady growth of their business and the lack of accommodation at their present premises in Sackville-street, are having new works erected in Buxton-street, off London-road. These are now nearing completion and the removal will take place during August next. The new building is a spacious single-storied one, with ample room for the installation of all the necessary machinery and plant for the manufacture of envelopes, die-stamping, etc., also for the storage of paper. It will be a thoroughly up-to-date and model factory in every respect.

Wiggins, Teape and Co., Ltd.

Chairman's Interesting Statement at Annual Meeting.

Mr. P. W. Holden (chairman) presided at the sixth annual general meeting of Wiggins, Teape and Co. (1919), Ltd., in London on Wednesday of last week.

Moving the adoption of the report and accounts the chairman said he had always maintained that the fine paper trade was a very sensitive barometer, following the rise or fall of the general trade of the country. With this qualification he thought he was justified in striking a more optimistic note that day, because up to that point during the current year their sales and profits showed a marked improvement. While this was particularly due to an improvement in certain trades, it was chiefly due, he thought, to the efforts made by the board in effecting economy of manufacture and increasing the output of certain grades.

New Lines Selling Well.

Proceeding, Mr. Holden said: The first task is to maintain our established standard lines on the market by keeping them up to concert pitch in quality, by guaranteeing our customers against loss caused by paper faults, by improving the service we give, and other means, and, at the same time, to put on the market new papers of exceptional quality, though of lower grade, at cut prices which cover prime cost of production and leave a small margin of profit. This we have succeeded in doing. The sale of our high-grade standard lines is well maintained, and the new papers are selling well both at home and abroad. As costs are reduced or consumption increased they will become more valuable, and they are not hurting our high-grade products, being in direct competition with Continental, American and Canadian papers. Again, we are attacking papers hitherto untouched by us."

Mr. L. W. Farrow seconded the resolution, which was unanimously carried.

THE Camberwell School of Arts and Crafts, Peckham-road, S.E.5, is holding the annual exhibition of the work of students of the School from the 10th to 24th inst.

PRINTING POSTAGE STAMPS.—The methods of printing postage stamps have been entirely changed by the French postal authorities, says *La Nature*. The new machine is a rotary which prints the stamps on rolls of gummed paper. The machine is provided with numerators and counters which automatically check manufacture. It prints, numbers, dries, perforates, cuts, forms packets and counts in one operation. Each rotary machine dispenses with ten workmen. There is said to be nothing new in this rotary machine, though the difficulties to be overcome required several years' study by M. Chambon, a distinguished mechanical engineer, and M. Demoulin, head of the postage stamp workshop.

Jobbing Guilds' Reunion.

Entertained by Exhibition Authorities.

Though the last amongst the many associations connected with the printing and allied trades to be entertained by the Exhibition authorities, the Guilds, whose Re-Union was held in the Grand Saloon on the closing day of the Exhibition, had a highly successful gathering. Mr. F. W. Bridges occupied the chair, and there were also present: Messrs. T. E. Naylor, M.P., Alfred Langley, George Eaton Hart, J. R. Riddell, C. J. Drummond, H. F. Parker, Frank Colebrook, and H. B. Naylor (Secretary, L.S.C. Jobbing Guild).

Mr. Alfred Langley, on being asked to address the meeting, said he felt it an honour and a privilege to be present that afternoon. He was sure he could say, on behalf of the London Master Printers' Association, that the members of the Association welcomed the efforts put forth by the Guild. He was glad to have an opportunity of paying a tribute to their Secretary (Mr. H. B. Naylor) for the work he had done for the L.M.P.A. in his capacity of critic and adjudicator of their competitions, and more especially in connection with the exhibit of specimens submitted for the Inter-District Association competition. Mr. Langley also recalled spending a very pleasant evening at the L.S.C. offices, when he gave a lecture to the L.S.C. Jobbing Guild on a subject in which he was deeply interested. As a result of the discussion and the running fire of comment which followed the lecture, he said, he learnt more in thirty minutes than he would have done in thirty months spent in his own office. Referring to the wide scope of the Exhibition, Mr. Langley remarked that he had looked in vain for any mechanical contrivance that would give him a range of machine-set poster types from 4-line to 80-line. Whether they would ever come he would leave others to prophesy. Whether mechanical contrivances would eventually supersede the monotony of hand lifting of stamps, or whether the photograph would make the present-day super-machines obsolete, no one could say. Whatever might come in the future, he felt sure there would always be a demand for the intellect of men able to produce beauty in typography.

Mr. T. E. Naylor, J.P., M.P., in proposing a vote of thanks to "The President, the Advisory Council, and the Organising Manager of the Exhibition," said it was not only in connection with the Guild that they knew Mr. Bridges. He associated himself with all good movements in the printing and allied trades, and they knew him as one of the earliest supporters of the J.I.C. They looked upon him as a friend and an adviser of the Guild movement not only in London, but in Manchester, Leeds, and other provincial centres where the Guild movement is now making great headway. Alluding to the Exhibition, Mr. Naylor said they found in the Exhibition a practical expression of everything for which the Guild movement stood, and in spite of what Mr. Langley had said, he (Mr. Naylor) still believed that there would never be any kind of machine—in the letterpress or lithographic department or in any other—which could compete with the natural skill and intelligence of the craftsman. Mr. Langley had said he had yet to discover a machine able to set type for posters. He (the speaker) said he had yet to discover a machine that would set even a circular without the aid of the man at the keyboard. Therefore, no matter how great the strides of inventors, they would never give them a machine that would prevent a skilled craftsman exercising his powers of workmanship in connection with a machine supplementarily to it. He was quite certain the members of the Guild had no feelings of apprehension as to what was going to happen to their craft as a result of the ingenuity of the inventor.

Mr. George Eaton Hart, in seconding, said the gathering that afternoon afforded an excellent means of mutual advancement in the things concerning their craft. What they had seen in that wonderful Exhibition had given the members of the Guild an opportunity of confirming their ideas regarding things they had read about in trade and other text-books. Movements in their industry were always upward and along the line of progress, and it was very important indeed that every member of it should take an intelligent interest of what was taking place with regard to various improvements! They not only saw that developments were taking place, but they realised that these improvements and new methods of production threatened additional alterations to their working conditions. After referring to the recent J.I.C. Convention, when subjects intimately connected with the best interests of their trade were discussed under the very best of conditions, Mr. Hart proceeded to say that it was perfectly true new methods were being introduced, particularly in connection with work engaged in by the members of the L.S.C. Guild. He hoped that the Guild would make further progress. It was perfectly true that whatever machine was introduced it would still require the craftsman to put into type the thoughts of mankind and whatever form a machine might take, the London Society of Compositors would be well advised to spend every opportunity of improving the composition of that machine. Not only must there be an improvement in the machinery itself, there must also be a corresponding improvment in the human machine, and this, he thought, should be the work of the Guild to foster. It was also necessary for them to see that the boys and girls entering the printing industry should have that standard of education necessary to equip them for executive positions. In concluding, he thought they were intensely grateful to Mr. Bridges for the enormous amount of work he had done in connection with the Exhibition.

Mr. Bridges, returning thanks for the appreciative remarks concerning himself and the hearty way the vote of thanks had been accorded, alluded to the great pleasure he felt at being present at the meeting. His reason for this was because the members of the Guild took a great interest in their profession. In saying that, he was aware he was saying a good deal. He had been astounded at the large number of working printers who had come to the Exhibition, not to see the side shows, but because they wanted to see the latest and best in connection with their industry. As a matter of fact, they had shown more interest in the different things in that building than the employers themselves. Although he had had twenty different functions to attend during the Exhibition, and that was the last of them, it was by no means the least important. After referring to the beneficent influence of the Guild, not only in Great Britain, but in Australia, Canada, South Africa, and America, Mr. Bridges, on behalf of Major Astor, announced the names of the successful competitors in the Guild competition held in connection with the Exhibition.

The winner of the Guild Letter Heading Competition was Mr. F. Harvey (with Messrs. McAllan & Co., Ltd.); Albert E. White, the winner of the Circular Competition.

Mr. H. B. Naylor (Re-Union Hon. Secretary), in making one or two announcements, referred to the unavoidable absence of one of their Vice-Presidents, Mr. G. W. Jones, who had sent his best wishes for the success of the gathering. Mr. Naylor said the Guild was always pleased to have the moral and practical support of friends in the whole of the trade, and he also thought it was up to the Guild to lend a helping hand to those in need. He then announced that a collection would be taken up, to be equally divided amongst the four charities in the trade.

Mr. C. J. Drummond, in proposing "The Visitors," said that this toast, coupled as it was with the name of Mr. J. R Riddell, stood for progress in technical education. He then went on to say that he had always taken more than a passing interest in the training of the printer, and concluded by paying a tribute to the remarkable work that was being done by the London School of Printing.

Mr. Riddell, in reply, said that in the provinces the craft guild probably had a wider outlook than the Compositors' Guild in London. In the provinces it included every section of the trade, which he thought to be more advantageous than if the subjects dealt with touched one section only.

The speeches were interspersed by a few enjoyable musical items, and the successful gathering was brought to a close by the singing of "Auld Lang Syne."

Examining Paper at the Docks.

Vigilance of the Custom Authorities.

In an article on import problems dealing with Customs regulations, a special correspondent of *The Times* (Trade Supplement) mentions paper in the following terms:—

Presumably on account of their convenience for illicit importation of other goods, reels of printing paper secure special attention from H.M. Customs. They are examined by unrolling or—regardless of commercial considerations—by boring. It is, however, provided that examination of selected reels may take place at the importer's premises or at the place of destination, *at the trader's expense* under the following conditions:—

(*a*) When the destination is in the same port a number of packages selected by the Customs officer are allowed to go forward to the destination under official tape and seal, the remaining packages being detained pending a satisfactory result of the examination.

(*b*) When the place of destination is in some other port or place, bond must be given by the importer or his agent in double the value of the goods. The whole parcel may then go forward, provided certain reels selected by the officer travel under tape and seal. The bond remains in force until the official examination results in a satisfactory report.

Duty is payable on each dozen packs of playing cards—a pack being carefully defined as "any quantity or number not exceeding 52"—but toy cards not exceeding $1\frac{3}{4}$ in. by $1\frac{1}{4}$ in. are admitted free of duty. Packs of cards imported for sale must be enclosed in wrappers provided by the Inland Revenue, and may not be removed from Customs charge until duly fastened in the wrappers.

A LATVIAN paper mill has secured a large order for Indian Government account for the supply of kraft paper. A new company has been formed in Riga which will specialise in the production of art printing paper. It is intended to produce not only for the local market, but also for export.

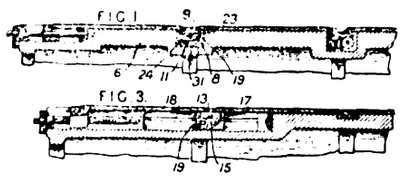
New Inventions

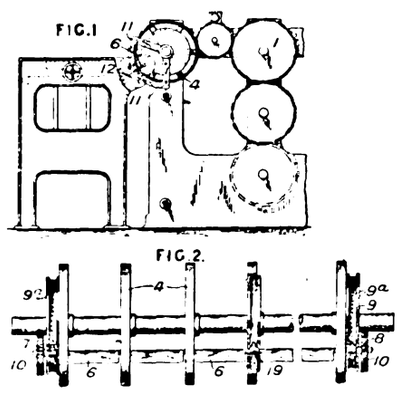
Delivery Apparatus.



A patent in the name of Messrs. Linotype and Machinery Limited, Bugler and Delafons, relates to sheet delivery mechanism of the kind wherein the sheets are transferred on to a reciprocating carriage during its outward travel and are swept therefrom on to the delivery board during its inward travel by pivoted pusher fingers swung into vertical position between the bars of the carriage, and comprises the combination with a spring device, such as a spring toggle which holds the pusher fingers in their terminal horizontal and vertical positions against fixed stops, of means controlling the operation of the pusher fingers in opposition to the action of the spring device at the time the spring device is acting to bring the fingers to their terminal positions so that the fingers are brought gently into contact with the stops. The pusher fingers 20 are mounted on a shaft 11 connected in the ordinary manner to a slotted link 29 actuated by a pivoted lever 30 which is rocked by one of the members actuating the carriage 15 so as to bring the fingers 20 into vertical position. The spring toggle consists of an arm 23 projecting from the shaft 11 and pivoted at 24 to a rod 21 passing through a fixed lug 22, a spring 25 encircling the rod 21

and acting between the lug 22 and a shoulder on rod 21. A cross rod 2 acting as a stop to the fingers 20 in their horizontal position carries a rigid bracket 1 to which is pivoted at 5 a fork 6 connected at 7 by a link 8 to a pin 9 on a crank 10 on the pusher finger shaft 11. The carriage 15 carries a cross shaft 14 oscillated by an arm 17 and roller 18 between two terminal positions determined by a double stop 16, and the shaft 14 has an arm 13 provided with a terminal roller 12 adapted to engage with and actuate the pivoted fork 6. At the end of the outward travel of the carriage to the left the shaft 14 is rocked by contact of the roller 18 with a cam 19 so as to swing the arm 13 downwardly and place the roller 12 in alignment with the fork 6. During the inward travel of the carriage and directly after the sheet has been swept off the carriage the roller 12 will then enter the fork 6 and swing it in a clockwise direction about its pivot 5, thus controlling the swinging of the pusher fingers 20 into their horizontal position against the stop rod 2. In its extreme position the fork 6 rests against an inclined stop 32. During the completion of the inward travel of the carriage and the commencement of its outward travel the arm 17 is lifted by a rail 28 extending between rollers 26, 27, by which means the arm 13 is rocked upwardly and the roller 12 maintained in a position to re-engage the fork 6. As the roller 12 continues its movement to the left it swings the fork 6 in an anti-clockwise direction and controls the movement of the pusher fingers 20 into their vertical position.

Printing Plate Clamps.



In an invention by Messrs. R. Hoe and Co., Ltd., a printing plate clamp is provided with two of its faces differently formed so that the clamp can be used either to clamp two adjacent plates with a margin space between or permit a double wide plate to lie over the clamp, or a single clamp can be used to provide margin spaces of different widths between two adjacent plates, the clamp being mounted in a recess in the printing plate support and being movable to bring the different surfaces to the top of the recess without removal of the clamp from the recess. In one form, Fig. 1, the clamp 8 is provided on one side with a margin face 9 and on the opposite side with a plain face 11, adapted, when turned toward the periphery of the cylinder 6, to allow a double wide plate to lie over it. The clamp 8 is pivoted on a spindle 23 carried by a block 19 secured in a recess 31 in the cylinder and is

fixed in its operative position by a screw 24. In the form shown in Fig. 3, the clamp is provided on opposite sides with margin faces 13, 15 of different widths and the carrying block 19 is slidable in a recess 17 in the cylinder, guide ribs on the sides of the block engaging grooves 18 in the walls of the recess.

Folding Paper.

In folding mechanism for printing machines of the kind comprising a folding blade rotatably mounted and adjustable circumferentially on a rotary cylinder, the folding blade being rotated by a pinion on its shaft engaging a curved rack on the adjacent machine framing to cause the edge of the blade to project periodically beyond the periphery of the cylinder and push the middle of the sheet between a pair of folding rollers, the folding blade bearings are received in grooved flanges which are external to the ends of the cylinder and which are provided with spaced holes in the grooves to permit circumferential adjustment of the bearing bolts. The sheets are passed from the impression cylinder 1 to a rotary cylinder 4 wholly or partly of skeleton

formation and carrying the rotary folding blade 6 mounted in end bearings 7, 8. The latter are secured by means of bolts and spaced holes 9a in grooved flanges 9 disposed on the outer ends of the cylinder 4. Another bearing 19 supports the blade intermediately. Pinions 10 on the folding blade shaft engaging racks 11 on the framing cause the blade to rotate and project beyond the cylinder when opposite the folding rollers 12. Subsequent folds may be imparted to the paper by mechanism of ordinary construction comprising oppositely travelling sets of tapes and chopper blades. The invention is patented by Mr. H. G. Rogers.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

THE *British and Colonial Printer and Stationer* circulates all over the world.

Digitized by Google

: THE. :

Printing, Stationery and Allied Trades Exhibition, 1925

was the most successful ever held. In order to ensure the new business you are expecting it is necessary to advertise, emphasizing the points you made at the Royal Agricultural Hall.

Nearly forty years ago "The British and Colonial Printer and Stationer's" Special Quarterly Export Issues were started, to cover the World's Printing Trade.

These special issues were almost instantaneously successful, and to-day "The British and Colonial Printer and Stationer" stands pre-eminent as the printing trade journal, carrying the message of British Print throughout the world.

Without exceeding the bounds of modesty, we can legitimately claim that this journal has made the export departments of certain firms, whilst it has increased the overseas business of its advertisers generally.

It is not for us to presume to instruct supply houses their method of doing business—we can only give you the experience of our advertisers:—

> "It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your Journal has contributed towards this export business.—C. B., Ltd."

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	East Indies.	Canada.
India.	West Indies.	United States.
South Africa.	China.	South America.
	Japan.	

The next Special Export Issue will be published on June 18th, 1925—and will be a fitting medium for Exhibition follow-up.

One of our representatives will be pleased to call upon you at your office, in your time and at your convenience. He is entirely at your disposal, and a conversation can do no harm.

Write us to-day!

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

Quality—IN PRINTING METALS

WE attain the 'FRYOTYPE' Standard of quality by meticulous attention to every detail ring manufacture; by providing the most up-to-date technical equipment and expert knowledge; by the absence of every particle of deleterious impurity from our metals.

The Results of using "Metal of Quality" are—

TO THE COMPOSING ROOM—Maximum output, good type.
TO THE FOUNDRY—"Formes" that "stand up" to the Moulding Press. Plates without blow-holes and "sinks."
TO THE MACHINE ROOM—Longer runs; clean clear print; good illustrations.
TO THE PROPRIETORS—A first-class production up to time at less cost; with the elimination of expensive (and irritating) delays.

with so-called "Just as Good" imitations when you can get the Time-Tested HIGH SPEED

Carlaw "Leader"

Envelope Folding and Gumming Machine.

They are giving Real Production because they have:

1.—Semi-Rotary Plunger Drive. No Cam. (Patented).
2.—Adjustable for any size within fixed range.
3.—Improved Rotary Delivery. Grippers eliminated (Patented)
4.—Wipe Gumming of the Tip retained, at High Speed, by new mechanism (Patented).
5.—Improved Hot Air Drying arrangement.
6.—Continuous Chain Drive.
7.—Disengaging Gear fitted to Gum Boxes.
8.—Gum Boxes that are very accessible and easily replenished
9.—Recorders for counting Daily Output.
10.—Front Crosshead mounted on pillars, making machine open and accessible.

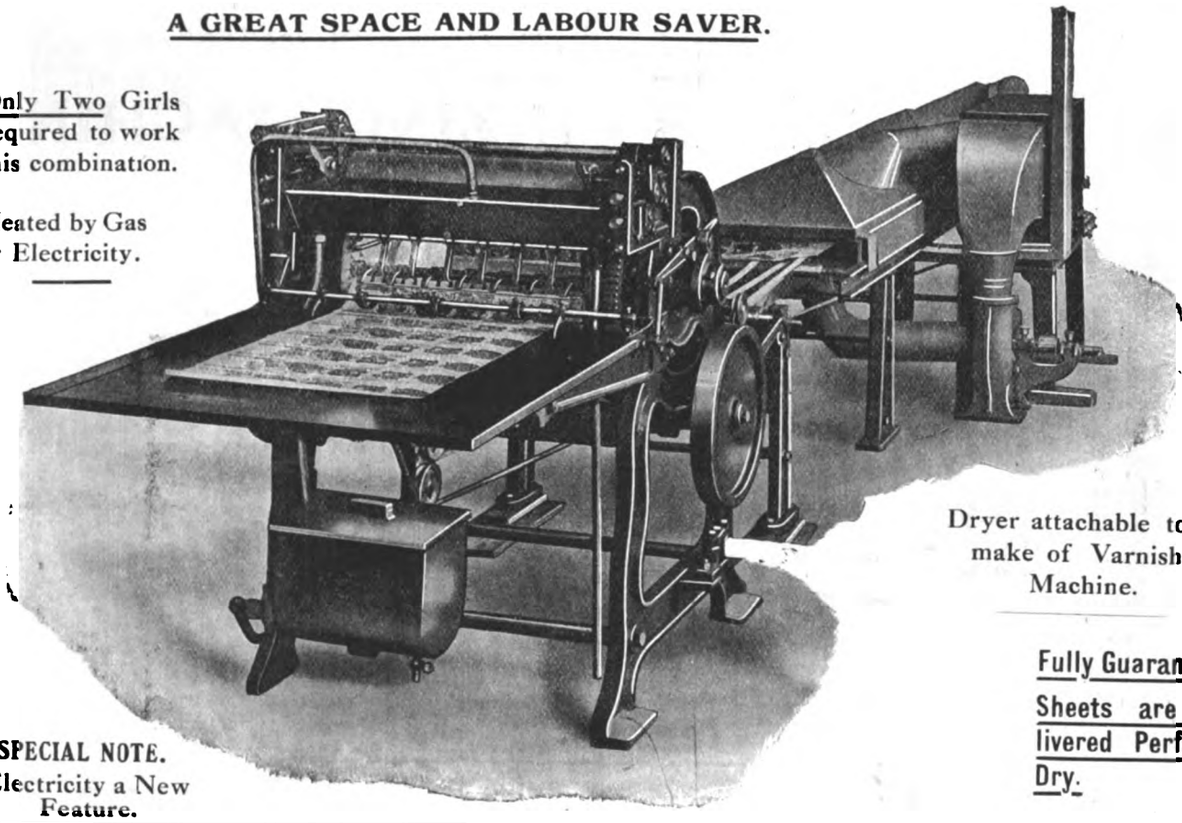
BUSH'S PATENT COMBINED

(Patented in Great Britain and Abroad).



Varnishing and Gumming Machine and Hot-Air Drying Apparatus.

(Patent No. 141,997.)

A GREAT SPACE AND LABOUR SAVER.

Only Two Girls required to work this combination.

Heated by Gas or Electricity.

Dryer attachable to any make of Varnishing Machine.

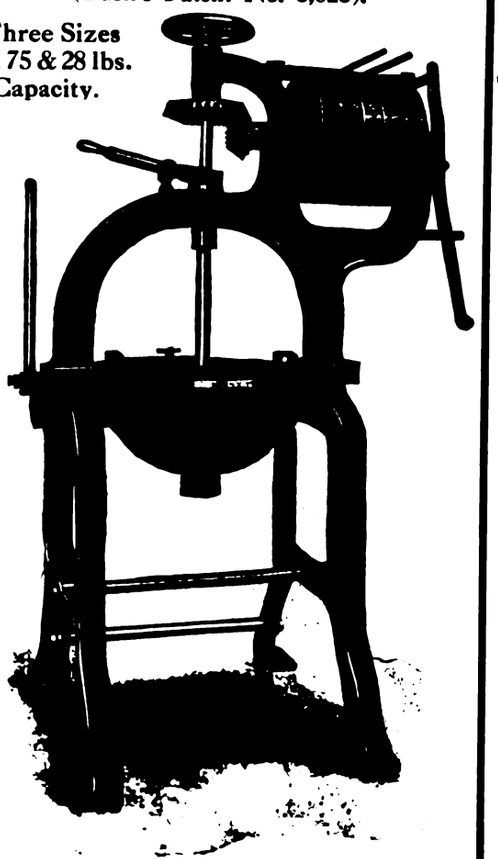
Fully Guaranteed.

Sheets are Delivered Perfectly Dry.

SPECIAL NOTE.
Electricity a New Feature.

The above illustration shews both our machines combined, but we can supply either machine separately.

Made in 4 sizes, D. Crown to Quad Demy.



Supplied to many of the leading Printing Offices at Home and Abroad.

INK MIXING MACHINES

(Bush's Patent No. 8,623).

Three Sizes
150, 75 & 28 lbs.
Capacity.

Tilting Bowl. — Movable Blade.

THE BRITISH & COLONIAL PRINTER

FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 96. NUMBER 25. [REGISTERED AS A NEWSPAPER.] LONDON: JUNE 18, 1925. Special Export Issue. 4d.

Export Notes and Comments

Essentials of Export Enterprise.

WHATEVER may be the particular market to which the exporter desires to send his products, there are certain essential requirements which must be met if a sound and growing business is to be built up. And it is in respect of some of these essentials—consideration for the peculiar needs or tastes of the oversea consumer, the arranging of terms of payment and the quoting of prices in a way convenient to the buyer and the use of the buyer's language in correspondence and advertising—that British exporters are often arraigned, and with some justification.

Criticism from Poland.

THE latest such arraignment to come to our notice is by Mr. R. E. Kimens, commercial secretary of H.M. Legation at Warsaw. Mr. Kimens—who in a report on the state of trade indicates that in Poland there is a large and favourable opening for British manufacturers and all too little endeavour to exploit it—proceeds to indict the methods of such British firms as are in that market. "British merchants," he says, "continue to ignore the local requirements and do not adapt their goods to the taste of the people. Prices are not quoted f.o.b. Danzig; the prices are given in sterling; tenders are seldom made in French or German, which are more accessible to the business man in Poland than English; and firms in the United Kingdom continue to employ German houses as intermediaries, which is strongly resented by the Poles."

Boosting British Goods.

A MOVE which holds important possibilities in the direction of extending the markets of British manufacturers is announced by the Federation of British Industries. The Federation have for over a year had under consideration a campaign to stimulate here and throughout the Empire the purchase of goods of United Kingdom origin. They have hitherto hesitated to approach the Government, as they have been most reluctant to suggest any further expenditure of public funds. Unemployment is, however, so serious that they feel justified in asking the Government to seriously consider a possible experiment by allocating funds for a publicity campaign to impress the public in the United Kingdom and the Dominions with the desirability of buying British rather than foreign goods.

World-Wide Publicity.

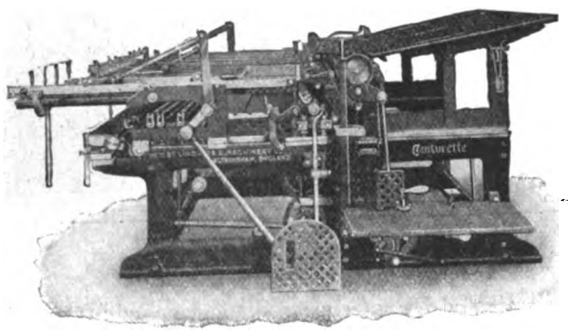
THIS campaign, it is suggested, should be co-ordinated with and be complementary to any campaigns based upon the £1,000,000 fund already promised by His Majesty's Government to the Dominions. As a public habit cannot be created by small sectional efforts, or be firmly established in a little time, the Federation are convinced that a national campaign lasting over two or even three, years is required. The main basis of the suggested campaign would be newspaper advertisement supported by poster and similar publicity, since the widest public is reached most directly and surely by this means. This main basis would be supplemented by public meetings, broadcasting, films, social activities designed to promote the use of British manufactures, local shopping weeks, and the like. It appears to us that exporters connected with the printing and allied trades would do well to watch the Federation scheme closely with a view to taking advantage of the opportunities that should result.

South African Printers' Hopes.

THE great item of interest in respect of export trade to South Africa is the proposed new Customs Tariff. South African printers have of late been finding business increasingly difficult, and for this they lay the chief blame upon overseas competition. Their strenuous efforts to get their trade protected by substantial duties upon imported printed matter would seem to have had the desired effect, as will be seen from the particulars of the proposed new Tariff which we print elsewhere in this issue. They are now building high hopes upon the prospect of South African printeries being called upon to produce a considerable proportion of the printed matter that has hitherto come from overseas. This should mean a good deal of extension and re-equipment amongst African printing works, and should offer scope for enterprising British suppliers of machinery and various other requirements of the printer.

The Recent Depression.

THE depression in the South African printing trade of recent years is seen from the increased amount of unemployment that has existed—the state of employment being a good indication of the amount of business done. The *Cape Times* recently published figures revealed by a statement issued by the South African Typographical Union, showing the annual amounts of out-of-work benefits paid to members during the past thirteen years. The figures show a striking increase in unemployment over the past four years. Total payment for the respective years were: 1912, £508; 1913, £539; 1914, £944; 1915, £1,125; 1916, £474; 1917, £458; 1918, £601; 1919, £603; 1920, £575; 1921, £1,766; 1922, £2,229; 1923, £2,526; 1924, £2,595. Interviewed regarding the abnormal increase, an official of the Union said the sudden increase in payments during the years 1914 and 1915 were accounted for by the dislocation of trade at the beginning of the war period, but to be enabled to understand the present position one had to realise what had taken place in the industry during the war and after. When overseas competition became more or less cut off as a result of the war, the printing industry was called upon to manufacture many lines of stationery that had previously been imported. During the years 1916 to 1920 inclusive there was very little unemployment, as could be seen by the statement, and the number of persons employed increased from 4,908 to 6,693, *i.e.*, 1,785 additional people had been absorbed into the industry during this period. Following the trade slump in Europe in 1921, large overseas printing and stationery manufacturing firms set out to recapture the South African market, and in certain lines had succeeded. Their competition affected bookbinding, ruling and letterpress printing, and it was in these branches of the trade that most of the unemployment now existed.



American Competition in Australia.

STATISTICS recently published illustrate the extent to which the United States is a competitor of the United Kingdom in the market of Australia. The Mother Country is still well ahead; and while blood remains thicker than water she should continue to hold the advantage. At the same time the stress of modern business necessitates efficient and economic equipment. Therefore British manufacturers need to display enterprise and initiative, even where they have natural advantages, as in the Commonwealth. The printing industry in the Antipodes is a virile concern, consuming large quantities of machinery and supplies. In paper and stationery alone, for example, the value of these goods received in Australia during the year ended June 30th last was over four millions. The nearest competitor was the United States, with £677,000. In machinery, metals, etc., supplies from this country ran to over 22 millions, America's figure being 16 millions. It is clear that the Mother Country has a good hold of the markets in the Commonwealth; but the growing needs of the printing and allied industries will make a greater demand still upon the energies and resources of British supply houses.

New Zealand Freights.

THE resumption of weekly mails between London and Australia recalls the serious complaints of the British paper exporters against the extortionate freights to New Zealand. Printers and others in that Dominion are large consumers of the products of home mills, and they are naturally seriously handicapped by the extra cost which the freights place upon the goods they use. One would imagine that shipping companies would see the advantage of encouraging trade to the utmost; but their persistence in abnormally high freights

The Centurette, made by Linotype and Machinery Limited at Altrincham, Cheshire, is size for size the fastest Two-Revolution machine on the market.

It prints Double Demy at 3,000 per hour, and the quality of the work is above that usually obtained from a two-roller machine.

This result is obtained by the excellence of the engineering work put into this press.

Many Centurettes are in use for colour work.

It is made in two styles—(1) with printed-side-up delivery as illustrated above, or (2) with fly delivery.

Fuller details will be forwarded on application to

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON

would seem to indicate that they are blind both to their own and the exporters' interests.

Indian Government Purchases.

THE report of the Indian Store Department for the year 1923-24 is of importance to those exporters who have a connection with that important market. Of recent years the tendency in the Indian Empire has been to encourage home industries, and the establishment of the Store Department was one of the measures adopted to that end. Nevertheless, the Indian market offers wide scope for British products, and statistics seem to show that the import trade is on the increase. In the allied trades, as well as in other branches of commerce, there has been an advance, although, may be, not to the extent or in the direction that might be desired. With regard to competition from domestic industries, a means of meeting this situation lies in the practicability of establishing "branches" in the country. A rather wide interpretation is apparently allowed to the term branch, by means of which a firm may be able to secure consideration for its goods from the Store Department. India is still a useful outlet for British goods and the cultivation of custom in that market is certainly desirable and worth while.

Canadian Printers Alarm.

CONSIDERABLE concern is felt among Canadian printers and publishers with regard to the future of the licensing clauses of the Copyright Act. The position has been far from well defined in the past, and the clauses referred to, which were incorporated in the Act of 1921, helped, in some measure to protect Dominion authors and publishers. United States publishers were very quick to seize the opportunities which previously existed of forcing authors to place work in their hands, the printing, of course, being done in the States. The licensing clauses were included in the Copyright Act of 1921, as a reasonable and just compromise between the contention of authors that copyright should give unconditional control of their work; and that of Canadian publishers and printers, that if the Government gives the author legal protection in copyright, it has a right to require, as in the case of patents, that the physical part of the production of the work be done in Canada for the benefit of Canadian industries and workmen. A repeal of these clauses, which is now threatened, would, of course, have a serious effect on the printing and allied trades and would mean that the great majority of books sold in Canada would be printed and bound across the border, with resulting detriment to Canadian printers, bookbinders, paper and ink-makers, compositors and pressmen.

The United States Way.

WHY, it is asked, should not Canada protect its interests in the same way as does the United States? Not only is the neighbouring Government not bound by the Berne convention, but it has in its Copyright Act a requirement that in order to justify infringement claims or piracy, a book or literary work must be printed in the United States from type and plates made there. Books and literary works not so produced can be taken and reprinted by a United States publisher without payment to the autnor and practically without formality. This non-adherence of the United States to the Copyright Union, together with the printing clauses of the United States

Digitized by Google

Copyright Act, has forced authors to publish separately in the United States if they desire to protect themselves and has been the chief cause for the prosperity and development of the publishing industry in that country. Therefore it is suggested that the Dominion should take a similar course by retaining the licensing clauses.

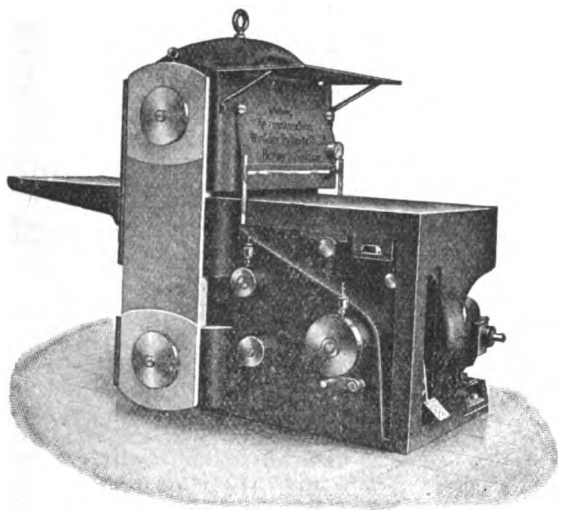
Alternative Plan.

THERE is an alternative plan put forward by the Canadian Pulp and Paper Association. This is an export duty on timber and pulp wood, the proceeds to be devoted to conservation work and protection. It contemplates the imposition of a tax on a graded basis, increasing annually, so that the various interests involved would have opportunity to make all necessary adjustments to meet changed conditions. This plan is attacked on the ground that the tax would do little toward defraying the cost of forest conservation, and would inevitably deprive 50,000 woodland owners, now dependent on the United States for a market, of their livelihood. The more the question is studied, the more its solution would seem to depend on conservation, the scientific fighting of fire and other menaces, the logging of only mature trees, the cultivation of little wooded or depleted districts, in fact, proper co-operation with nature. One thing is sure, and that is that the matter of conservation should be examined much more thoroughly than it yet has been. The industry is of enormous import to Canada's development and should contribute of its abundance to its own salvation, for a timber famine would increase the rigour of Canada's climate, curtail exports, close down mills, end profits and spell unemployment for the thousands dependent on it for a livelihood. If the latest move of the Canadian Pulp and Paper Association has conservation as its objective, it is a definite step in the right direction; but it does not appear to meet directly the case of the domestic printer and publisher.

Lithographic Activity.

WHILE printing business generally has not been too brisk, Canadian lithographers have been doing quite well of late. A review of the past twelve months suggests that a greater volume of trade has passed through the hands of the lithographers than ever before and the trade in such centres as Toronto and Hamilton has undergone considerable expansion. Those in the trade say that this development is due largely to the lessened cost as compared with the typographic printing branch. Offset printing in the Ontario field has also made considerable progress and leaders in the printing trade predict still further development in this line during the coming year. Machinery houses have not had such a busy time. One feature of the printing machinery business that stands out is the change over by many firms to small fast presses. There are considerably fewer presses of big size in Ontario to-day as compared with a year ago, most of the bigger machines having been replaced by the smaller ones.

The Market in China.



THOSE concerned with the supplying of the printing and allied trades in China are faced with a prospect that cannot be regarded with much optimism. Last year was a period marked by dullness of business generally, and the tendency of buyers has been to restrict purchases to a degree just sufficient to cover temporary requirements. One effect of this tendency, it may be remarked, has been the encouraging of the holding of larger local stocks, to enable dealers to meet promptly the small demands forthcoming. Since last year there had been more hopeful signs, notably an improvement in the textile industry which is an important one and has a big influence upon the state of business in general. A disquieting influence, however, is the existence of the anti-foreign feeling, which has come to such unpleasant manifestation at Shanghai, and this inevitably hinders trade development, particularly in the direction of long-term undertakings of any kind.

Reforming the Tariff.

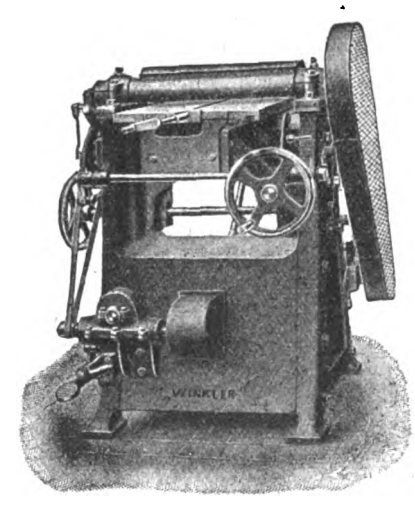
THERE are prospects of an important alteration in the system of raising revenue in China. Practices in that country have rendered business exceedingly difficult, and the obstacles in the way of developing foreign trade there have been almost insuperable. One of the hindrances has been the imposition of what is known as the "Likin" tax. The Chinese Government has already recognised that the system of levying likin and other dues on goods at the place of production, in transit, and at destination, impedes the free circulation of commodities and injures the interests of trade. Accordingly they undertook to discard completely these means of raising revenue. The agreement, however, which was embodied in the Mackay Treaty, was never put into force. Now another effort is to be made to uproot the evil system in vogue in the Celestial Empire, and an international conference on China's import tariff, provided for in the Nine Power Customs Treaty signed at the Washington Conference, is to be held with a view to considering the conditions on which the import tariff shall be raised from 5 per cent. to 7½ per cent. for ordinary commodities and from 5 to 10 per cent. for luxuries. Anything that can bring some sort of order into the fiscal arrangements of China would be a great achievement, especially in view of the enormous commercial potentialities of that country.

Supplies for China.

EMPHASISING the remarkable growth in the demand in China for foreign-style paper during the past ten years, Dr. Julius Klein, director of the United States Bureau of Foreign and Domestic Commerce, states that China's paper imports had increased from 32,352 tons in 1912 to an annual average of 80,022 tons during the past four years. The class of foreign-made paper in most demand is a white, unsized news-print, suitable for printing books, newsprint, suitable for printing books, newspapers, posters and handbills. The paper is imported —largely from Japan and European countries —in bales of 12 reams, 500 sheets to the ream. It is essential that there be as nearly 500 sheets in the ream as possible, for the Chinese customer counts them and is dissatisfied if the number does not accord with the specifications. British suppliers appear to have little hold on this promising market. Japan is the principal factor in the paper trade of China at present and the United States is increasing its share.

"Winkler"

Automatic Folding and Drying Press.



For Fine Art and Newspaper Moulds, Dry and/or Wet Flong—Hot or Cold—with Electric or Steam Heating.

Equals in capacity THREE Pneumatic Presses.
The Matrix is moulded and dried in one operation, the drying taking place under reduced pressure (patent).
The Moisture is extracted by a suction pump.
Automatic Temperature Control and Time Switch.

¶ Produces, in conjunction with Light's "Photo-Tone" Fine Art Flong, Half-Tone Matrices of finest screen so accurate that Stereos cast therefrom are facsimile to originals.

¶ Perfectly even pressure throughout the surface of the platen is absolutely guaranteed, in contra-distinction to all stereo presses operated pneumatically, hydraulically, or by hand power, which have centrally actuated platens inevitably more or less deficient in equality of pressure.

¶ Saves Type, Time, Labour, Power and Fuel.

"Winkler"

Flat Plate Milling Machine.

Mills plates from type-height to pica-height, guaranteed true to ½ thou. of an inch throughout. It combines the functions of two different machines—the Roughing Machine and the Shaving Machine—because it mills the plate in **one** operation down to the desired height.

¶ Insure top-notch printing results by building your plant on a foundation of top-notch Stereotyping Units—the "**Winkler**" Outfit.

¶ The basis of perfect pictorial stereo production is blocks uniform in height, perfect in depth, even in printing surface, and hard in wear.

¶ Progressive printers have adopted the ideal method of mounting their plates exclusively on soft metal bases which have been planed true to a fraction of a thou. on a "**Winkler,**" thereby **saving about 50 % or more on "make-ready" on the printing press.**

WHY YOU SHOULD USE TYPON

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON requires no oiling or special treatment in developing; highly skilled labour is therefore not required.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase. Typon material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON adds to the resources of the Litho and Planographic Printer and reduces his working costs.

TYPON PAPER NEGATIVES

SOLVE your photo-reproduction problems for you!

They are cheaper, quicker, easier to handle, and better in every way than any other method.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Export Trade with South Africa.

Proposed Tariff Changes of Great Importance to the Printing and Allied Trades.

The Tariff Schedule recently introduced in the Union of South Africa is of very great interest to the printing and allied trades of this country as well as to South African printers, because the proposed new Tariff rates are definitely calculated to effect on the one hand a reduction in the amount of printed matter imported into South Africa, whilst on the other hand increasing the extent of the printing trade in the Union, and so enhancing the importance of South Africa as a purchaser of printing machinery and other supplies.

It will be remembered that South African printers have lately been vigorously pressing their demands for Tariff protection against the importation of overseas printed matter of various kinds, and it would appear that they have been largely successful in bringing about the changes they desired. The South African stationery trade is, however, opposed to the increased duties on manufactured goods handled by stationers, and the trade has not been backward in making its voice heard on the opposition side.

The new Tariff schedule is understood to be as yet subject to modification. For those items in the Schedule in which an *increase of duty* under the Maximum Tariff is proposed, as compared with the old Tariff rates, the increased duties are operative from April 9th, 1925. Items in the Schedule providing for a *decrease of duty* under the Maximum Tariff, as compared with the old Tariff rates, cannot become operative until sanctioned by Act of the Union Parliament, and the old rates of duty remain operative in such cases. As regards the preference on United Kingdom goods, such goods will continue to enjoy the 3 per cent. *ad valorem* rebate as formerly, until the new preference proposals are sanctioned by the Union Parliament.

As to possible modification, the *South African Printer and Stationer* states:—"It is not expected that the Tariff proposals will be adopted without attempts to alter details and incidences of levy and to procure suspensions. It is understood that the stationery trade are moving to send a widely representative delegation to Capetown to voice certain protests on behalf of the trade, and it is said that the support of the Chambers of Commerce is being actively canvassed. The printing industry are confident that the Tariff in so far as it principally concerns them as printers will remain as presented. The revenue features of the Schedule they are doubtless open to leave as a matter upon which the stationers and the Board can hammer out a final decision."

The Schedule.

The new Customs Tariff Schedule provides a large measure of protection to the printing industry of South Africa against overseas competition, both in the way of increased duties on items that are printed or manufactured in South Africa, and by a remission of duty on items used as raw material by the industry.

An examination of the Customs statistics for the year 1924 gives some idea as to how the industry will be affected by the new duties, and the following information will be both interesting and useful:—

Items upon which the old duty was 25 p.c. less 3 p.c.	1924 Imports.	New duty Minimum.
Picture post cards, etc...	£15,071	35 p.c.
Account books, etc. ..	76,879	40 ,,
Envelopes, printed ...	5,040	30 ,,
Bags, printed	6,146	1½d. lb.
Cartons and boxes, printed	18,883	30 p.c.
Label, tickets, etc. ...	16,699	40 ,,
Price lists, Union firms...	3,401	40 ,,
Printed matter, N.E.E...	87,145	35 ,,
	£229,264	

Many items which previously fell under the miscellaneous classification, subject to a minimum duty of 17 per cent., now become dutiable under the 35 per cent. or 40 per cent. rate, or 6d. per pound (the value of imports is estimated at £300,000). These include: Almanacs, calendars, diaries, delivery books, manifold books, letter copying books, letter copying books, index books, receipts, reminder slips, certificates for lodges, etc., loose-leaf covers and binders, letter or document files in book or folder form, ruled paper, printing wrapping paper, copy books, exercise books, writing pads, etc.

The Free List.

Item No. 118 of the new Schedule lists as duty free: Machinery, apparatus, appliances and implements (not specially provided for, and not including material, domestic machines or vehicles). This will cover everything in the way of plant or equipment of a printing office, but it is worthy to note that numbering and perforating machines, not being for the printing or bookbinding industry, and duplicating machines, are dutiable 15 per cent. minimum, or 20 per cent. maximum.

Tariff item No. 356 enumerates articles and substances which, notwithstanding duties otherwise levied, will be admitted free on importation if intended for use only in the printing, lithographing, bookbinding and cardboard box-making industry.

(1) Inks: printing, lithographic, and ruling; ruling ink powder, roller composition, stamping colours and printers' bronze powder; lithographic offset powder and ink drier; gold, silver, bronze and aluminium leaf.

(2) Process block-makers' requisites, namely: Nitrate of silver, collodion, iodiser, fish glue, dragons blood, glacial acetic acid, biphosphate of ammonia, glass screws, plate and photographic paper, varnish, including litho varnish, glass marbles, pumice blocks, snakestone blocks, stereo blotting paper and graining grit.

(3) Bookbinders' cloth, canvas in white and colours, American cloth, webbing, parchment, leather, imitation leather, corduroy, skins, vellum, binders' paper, marble paper, thread, tape and pulpboard.

(4) Wall-paper and other fancy paper in rolls for box-making: and metal eyelets, parts and edging, and corrugated lined board.

(5) Gum for envelopes.

(6) Sulphite papers for printing purposes only.

The new tariff, it will be seen, makes increases over that of the old up to the maximum rate of 40 per cent., and is calculated to reduce the trade in specially printed, ruled and bound work from oversea sources.

The carton and cardboard box production in South Africa is growing in range and volume and now is a considerable section of the trade. As a set-off against the claims upon them to level up their working conditions to the requirements of the National Agreement the duty has been raised to 30 per cent.

Milk bottles disks, plain or printed, hitherto free, now carry 20 per cent. duty as an item which can be easily produced in South Africa.

Inks and ink powders (outside the raw material of the trade) now carry 30 per cent.—an additional 13 per cent. Several producing laboratories have produced inks fulfilling the requirements of a good serviceable ink.

A new departure is introduced by a levy of 30s. per 2,000 lbs. on news-print in reel or in the flat.

Directories, guide books, year books and hand books, also Christmas annuals, relating to South Africa, take the full rate of 40 per cent., as also do price lists and catalogues of South African firms and firms holding stocks in South Africa.

Account books of all kinds and ruled and printed stationery of every sort, carry the maximum 40 per cent. rate.

The stationery trade protest principally against the inclusion under this higher rate of diaries, half-bound account books, Christmas cards and post cards, etc., also loose-leaf covers and binders of the smaller range of these articles, as also document files.

Printers in South Africa are optimistic as to the possibilities of a considerable increase of business as the result of the new Tariff.

The late Mr. Laurence Green, of Maidstone, left £19,911 (net personalty £5,909).

Stop that Leak in Bindery Profits!

A Cleveland Folder will do it. If it's folding that is running away with the money (and it usually is !), then nothing will stop the waste more effectively than a Cleveland Folder. Because it is so productive. The Cleveland Folder is the fastest folding machine there is, and the most versatile. It handles all the work that ordinary folders will do, and a lot besides that no other machine will touch. And, all the time, it produces far more work and far better work, always accurate. It is extremely simple, owing to the absence of any tapes, knives or timing devices, and the lack of any complications makes it easy and quick to change over. Cleveland Folders are made in all sizes from Eight Crown down to Demy Folio.

The Cleveland is your ideal, and it's attainable by writing or telephoning the manufacturers. *(The Cleveland is made in England).*

Supplies for the Oversea Printer.

Statistics, January to March, Indicate a Satisfactory Improvement, Compared with the Preceding Corresponding Periods.

Exports of British paper and cardboard during the first quarter of the year—amounting to 1,230,791 cwts. (£2,456,667)—indicate an extension in business when compared with the corresponding periods of the two preceding years, when they represented respectively 1,087,206 cwts. (£2,198,655) and 1,021,839 cwts. (£2,104,267). In the following statistics, which deal with many of the principal classes of goods handled by the oversea printer, evidence is given of the ability of the manufacturer at home to supply the needs of the Colonial user.

Printings.

Shipments of British printings during the first three months of the year amounted to 888,386 cwts. Of this quantity no less than 91·8 per cent. was dispatched to British possessions and 8·1 per cent. to foreign markets, the actual figures being respectively 815,915 cwts. and 72 431 cwts.

The importance of the various markets may be seen by a reference to statistics. The most prominent feature of the returns is the growing quantity of British printing paper consumed by Australia, whose purchases amounted to no less than 606,109 cwts. This figure was not only well over the average registered for a normal quarter, but indicated a big increase of 253,384 cwts., or 71·8 per cent., compared with the shipments of the corresponding quarter last year. In value, the exports of printings to this valuable market represented £682,732, compared with £408,529 during January to March last year.

New Zealand was the next largest buyer of this class of manufacture during the quarter, taking 55,454 cwrs. (£69,750), compared with 68,862 cwts. (£86,377) in the corresponding period last year, and 57.420 cwts. (£83,152) in the same three months of 1923.

British India comes next with 39,194 cwts. (£66,631), against 41,794 cwts. (£65,704) in January to March last year and 63,625 cwts. (£105,098) in the corresponding quarter of the preceding year.

British South Africa was also a large buyer of British printings, her purchases amounting to 26,420 cwts. (£44.619) during the first three months of the year, compared with 22,866 cwts. (£41,578) in the 1924 quarter, and 32,226 cwts. (£55,276) in the corresponding period of the preceding year.

Ceylon's requirements which were satisfied from mills in the United Kingdom during January to March registered 9,223 cwts. (£:4,003), 5,241 cwts. (£7,663) in the corresponding period last year, and 4,128 cwts. (£7,456) in the 1923 three months.

Canada was a larger customer than in the two former corresponding periods, taking 6,606 cwts. (£13,799) during January to March, against 3,207 cwts. (£7,492) last year, and 4,429 cwts. (£9,353) in the 1923 quarter.

Under the heading of "Other British Possessions," there is indicated a very appreciable increase in the demands for printings, the returns for January to March of the three periods being as follows: 69,884 cwts £84,982), 1925; 31,202 cwts. (£52,396), 1924; 7,571 cwts. (£12,502), 1923.

Coated Papers.

With the exception of February, the monthly returns relating to the exports of coated papers from the United Kingdom indicate a better demand from overseas markets. Amongst the various classes of goods enumerated under the heading of coated papers, those designated "printed and embossed paper hangings" form by far the most important item. Under this particular description exports during January to March amounted to 49,965 cwts. (£233,885), against 48,425 cwts. (£226,466) in the corresponding period last year, and 38,892 cwts. (£177,938) in the first quarter of 1923. All other sorts of coated paper, which do not include waterproof wrappings and roofing paper, reached a total of 23,640 cwts. (£113,778) during January to March, against 12,133 cwts. (£80,290) in the corresponding period last year, and 9,576 (£65,624) in the 1923 quarter.

Writing Paper.

The demand from overseas for writing papers of British manufacture during the first three months of the year appears to have been fairly well maintained, consignments to the various markets reaching a total of 56,140 cwts. (£160,311), against 53,606 cwts. (£148,837) last year, and 59,624 cwts. (£161,332) in the corresponding three months of the preceding year. Australia was again the largest buyer of this class of manufacture, receiving shipments to the extent of 23,149 cwts (£54,955), against 16,008 cwts. (£43,036) in the corresponding period last year, and 25,480 cwts. (£59,794) in the 1923 three months.

British India came next with 9,333 cwts. (£27,433), compared with 10,864 cwts. (£28,235), and 15,224 cwts. (£40,053) in the two previous corresponding periods respectively. The purchases of the other Colonial markets during January to March were as follows, the receipts for the corresponding period of last year being shown in parenthesis:—New Zealand, 7,937 cwts., £19,021 (8,173 cwts., £16,692); British South Africa, 2,848 cwts., £9.702 (3,152 cwts., £10,472); Ceylon, 1,517 cwts., £4.357 (746 cwts., £2,588); Canada, 1,240 cwts., £3.774 (303 cwts., £1,177); Straits Settlements, 421 cwts., £1,731 (356 cwts., £1,156).

Tissues.

The volume of tissue paper exported has not shown much variation during recent months, whilst the returns for the first quarter of the year were also on a similar scale to those of the two preceding corresponding periods. During January to March tissue paper shipments represented 3,846 cwts. (£39.959), compared with 3,791 cwts. (£34.536) in the corresponding period last year, and 3,224 cwts. (£32,367) in the first quarter of 1923.

Packings and Wrappings.

Consignments abroad of British packings and wrappings indicate a considerable falling off during January to March when compared with the figures for the corresponding three months of both last year and 1923. The downward movement is all the more regrettable when the big increase that took place in the imports of packings and wrappings for the same periods is taken into consideration. During the first three months of the year shipments from this countrv of this class of merchandise amounted to 61,912 cwts. (£99 957), as compared with the considerably bigger figures of 101,245 cwts. (£137,265) and 118,427 cwts. (£91,040) in the two preceding corresponding periods.

Stationery Exports.

Stationery continues to occupy a prominent position amongst the various classes of goods in the British paper and cardboard export list. Embracing envelopes, but excluding boxed stationery, the importance of the trade is clearly evident when it is remembered that shipments abroad during the first three months of the year amounted to 60,071 cwts. (£373,219), against 51,081 cwts. (£325,650) in the corresponding period last year, and 43,626 cwts. (£355,544) in the 1923 three months. Although the official returns do not indicate the destination of these exports, it may be safely assumed that much the larger proportion finds its way to the Australian market. In support of this assumption it may be stated that in the September quarter of last year Australia received stationery from the United Kingdom representing a value of £429,921, as against £612,345 from all countries.

Stationery (other than paper) exported during January to March also shows a similar advance amounting to £359.049, against £334,540 in the three month last year, and £301,227 in the corresponding period of the preceding year. British India occupies the most prominent position in this section of exports, supplies to that market amounting to £55,680, against £47,691 in the first quarter of last year. Australia was next with £37,880, against £38 535 last year. The receipts of the other British Colonies during January to March were as follows, the figures in parenthesis indicating the totals for the preceding corresponding period: New Zealand, £13,381 (£10,228); Canada, £8,259 (£10,469); Ceylon, £6,672 (£4,071); Straits Settlements, £6,418 (£4.990). Exports to the United States show a considerable advance, and amounted to £41,671 during January to March, against £24.504 and £20,813 in the two preceding corresponding periods.

Boards.

Exports under this heading during January to March reached 27,397 cwts. (£47,224), contrasted with 33,825 cwts. (£55,386) in the corresponding period last year, and 23,129 cwts. (£50,233) in the similar period of the preceding year.

Printed Books.

A satisfactory increase in the demand from oversea markets is indicated in the exports of printed books Though the destination of these exports is not shown in the returns, it is well known that Australia is a very big customer. During the three months under review, printed books of British make sent abroad represented a value of £911,392, compared with £856,014 in the corresponding period last year and £683,264 in the first quarter of the preceding year.

Printing Type.

Shipments of printing type for the first three months of the year evidence an improvement. This is all the more satisfactory considering the falling off that had previously been noticed. Exports during the first three months of the year amounted to 7,596 tons (£17,179), compared with 4,701 tons (£14,973) recorded in 1924 and 4,362 tons (£17,626) in the 1923 period.

Boxes and Cartons.

To judge by the increased export returns, boxes and cartons of British make are growing in favour. Consignments abroad during the first quarter of the year reached 14,686 cwts. (£51,906), against 11,373 cwts. £44.889) in the corresponding period of last year, and 6,423 cwts. (£30,086) in January to March, 1923.

Paper Bags.

Improved paper-bag making machinery coming on the market during recent years is having a beneficent effect in aiding British exporters to meet the ever-increasing demands of the oversea buyer. This is shown by the improved demands that have been made recently by the Colonial purchaser. Exports for the first three months of the present year reached 14,995 cwts. (£30,571), contrasted with 12,861 cwts. (£26,752) in the corresponding period last year, and 4,227 cwts. (£16,778) in the 1923 three months.

Playing Cards.

Playing card exports, although better than in the first quarter of 1923, show a slightly lessened demand compared with the corresponding period last year. The totals for the three respective periods were as follows: 938 cwts. (£16,636), 1925; 957 cwts. (£17,695), 1924; 542 cwts. (£10,474), 1923.

Printing Trade.

WORKS Manager wanted for large Printing and Binding Works in Midland Town. Applicants must have acted as Managers for responsible Deputy Managers in large Works. Age preferred 35-45. A good salary offered to a first-class man.

Write fully, stating age, to Box 17107.

To The Modern Lithographer,
(Throughout the Kingdom)

Dear Sirs,

If you visited the Agricultural Hall, London, during the Printing Trades Exhibition, and saw the Marinoni-Voirin Stands - We Know - you were impressed, We Feel - you were astonished at the range of machines there exhibited.

Such a demonstration is proof of vigorous and healthy manufacturing ability sustained by continuous success.

We invite you to share that success by the simple operation of installing our products on approval. You will thus discover that the production of beautiful printing is a simpler, and a more economical process than you have hitherto found it to be.

Your enquiries and proposals will receive immediate and full consideration.

Yours faithfully,

FRANCIS J. CONNOLLY. LTD.

Egypt and India and their Printshops.

By GEORGE CECIL.

Opinions vary as to where printing is carried out under the most heated conditions. Some will have it that the tiny room in which the menu for the ocean-going liner is printed by a diminutive hand press is hotter than Hades, especially in the tropics. Others believe that Singapore—in the torrid Straits Settlements—bears away the palm, while the white man who has supervised the work of the printers employed by a Burmese newspaper declares that the land of the pagoda and the flying fish is warmer than the whole of the East put together. The European printing room staff of the Bangkok *Times* considers the excessive mugginess of Siam worse than all the plagues of Egypt. This opinion is countered by the American proprietor of an English paper which is published in Cairo. The exile admits that the premises are not unbearable during the winter months, when a cooling breeze often blows in from the desert, bringing with it a feeling of invigoration. But from the end of April till the beginning of October, and even later if the meteorological conditions have proved unkind, he wishes that fate had cast his lines in a cooler spot. Much the same conditions prevail in Tunisia, summer printing life in Algiers being particularly trying.

Port Said (the winter season excepted) tries the unhappy white man whose lot it is to manage a printing works, and he whose destiny has taken him to Colombo is no better off. Nor are Haphong and Hanoi (in Tonquin) exactly salubrious at any time of the year, the French who lead perspiring lives in the engine and typesetting rooms wishing they had never left their native France. There is, however, a worse country than any of these: India, to wit.

Where Extremes Meet.

In the "hills," as the Himalaya Mountains are known, printing is a pleasant enough occupation, and, when chilly winter sets in, an uncommonly cold one. The spring, summer and autumn climate is, as the English-speaking native puts it, "Europe-like," and the European who is in charge of a press in Simla, Naini-tal or Musoorie, the three picturesque townlets perched beneath the shadow of the "eternal snows," could not wish for a pleasanter billet. Though scarcely making his fortune, he at least is happy and healthy.

The moment the terai (the jungle land at the foot of the mountains) is crossed, the heat begins to make itself felt, though fortunately not till the fleeting "cold weather" is over. But by the first of March the "brain fever" bird, a horrible creature which croaks like nothing else on earth, roosts in the parched trees near the flat roofed, whitewashed building in which printing operations are carried out, and discordantly ushers in the "hot weather." Six weeks later, from one end of the "plains" (so called to distinguish them from the "hills") to the other, the atmosphere is simply appalling, everything—and, incidentally, everybody—being dried up. Nor when the monsoon bursts in June are things much better. Certainly, while it actually is raining, the air is cooled for a few hours, and the relief is most welcome, so much so that the sahib (white man) strips and stands for a blissful half-hour in the tropical downpour. The minute, however, that the not-to-be-denied sun breaks through the black and purple clouds, it is even hotter than before. All is blazing.

The natives and half-castes employed about a newspaper printing room, or in a jobbing establishment, do not mind these detestable conditions. Indeed, the first sign of rain sends them shivering to their bazaar homes, where, over a hookah of evil smelling native tobacco, they curse the monsoon and its evil consequences to the coloured man's well-being. The English manager, on the other hand, speedily knuckles under. The store of health which he has laid in during the "cold weather" does not last him long; by mid-summer he is a limp rag. How some of these martyrs succeed in pulling through is a mystery, for each looks half-dead as he goes about his tiring work. Perhaps the knowledge that the "hot weather" cannot last for ever buoys them up. Yet, an alarming percentage have succumbed to the deadly climate and within a very few years of their ill-fated arrival in India. Several, in fact, found as little as one summer more than human endurance could stand. . . .

At Meerut, in a tiny, deserted cemetery, overgrown with rank grass and housing many a snake and scorpion, is a crumbling monument to a Greek, who, after conducting a printing business, died "a victim to an apoplexy brought about by too long a sojourn from the land of his birth." The epitaph, which is dated 1821, adds: "The gentleman lived respected and died lamented."

"Master's Eye."

The European printers of Bombay will have it that nowhere else in India is the heat so intolerable. But they are a little out in their surmise. *Urbs primis in Indis* (as the learned entitle Bombay) is right on the sea; consequently a refreshing breeze springs up after sundown. Calcutta, on the other hand, is divided by a muddy river, which at times exudes a frightful stench and the most pestiferous heat, while the printing presses, of which there are a considerable number, both major and minor, are situated in a crowded, shut-in part of the town. And from early in March till the beginning of December the stifling atmosphere is truly awful. The unhappy white man who supervises the work of the black employees is in a profuse and ever-present perspiration from the moment he leaves his bed till it is time to return to this blessed haven of oblivion. Do what the sahib will, he cannot keep cool. Though wearing but the thinnest possible cotton shirt and a tussore coat and trousers, he is never free from that uneviable condition described by the town-bred lady in "The Vicar of Wakefield" as all of a muck of a sweat. Unenviable is his state.

Nor can the much-tried manager remain quietly seated at his office table. In the East "master's eye" must be everywhere. He is in and out of the composing room every few minutes—to prevent the native compositors from idling. Galley proofs pass through his clammy hands before they reach the editorial side of the establishment, the half-caste proof-readers being utterly incapable of passing them. He also must be an expert mechanician and engineer, for the machinery is in his special charge, as also is the engine (usually a gas one) which operates it. Were the engine to be left to the tender mercies of the native who is told off to look after its well being, a stoppage would be caused by heated bearings. Ram Lal cannot be made to understand that the parts require lubricating; that the oilcups must not be allowed to run dry and that the sight-feed lubricator's dropping apparatus requires watching. Ranking as an engineer, he is little more than an oiler—and a poor one at that.

Mercifully for the European superintendent of a printing works, the law imposes a Sunday holiday for all workers, except those engaged in the production of Monday's newspapers, Saturday being their day of rest. The native staff employs the holiday in chattering, savouring odoriferous sweetmeats which are made from rancid butter coloured with cochineal and flavoured with bazaar odours, and basking in the blazing sun. His white master boards a steamer bound for the mouth of the river, returning the same evening in the pilot's launch, and feeling all the better for a tantalising sniff of the distant sea breeze. He is not, however, invigorated for long.

The half caste employees do not require cooling, the steamy heat of Calcutta having no terrors for them. Da Costa and MacPherson (these parti coloured people invariably rejoice in a Portuguese or Scotch name) spend their off-day in the bazaar, where, like all semi-natives, they are very much at home. No Eurasian has, within the memory of man, been overcome by the climate.

Talking Pays Better than Printing.

Excessively unpleasant though printing conditions are in red-hot Calcutta, and elsewhere in superheated India, they were even worse in the early days of the last century. The punka (now superseded by the electric fan) was unknown; the Anglo Indian had to get through the twenty-four hours as best he could without it. Ice being unobtainable, the wretched exile contented himself with filtered water partly cooled by the vessel containing it being swung in the fitful breeze. Brandy was added—to kill secreted germs which might have evaded the vigilance of the native servant who attended to the filtering. The country having little means of transport beyond river boats and horse-drawn vehicles, there was no escaping to a cool "hill station" for change of air. He who conducted the destinies of a printing business could but lead an abstemious life, and hope for the best. Few lived to return to England; perhaps they over-qualified their drinking water.

No white manager of a printing press is so well paid that he can afford to retire while in the flower of his manhood. The Viceroy, agreeably installed in cool Simla, receives countless rupees for making platitudinous speeches; but his fellow exile who superintends the setting up of the flowery words for the next day's Calcutta newspapers is poorly recompensed.

Something appears to be wrong with the fitness of things.—*The American Printer.*

REPORTS concerning the rioting in Shanghai and other parts of China mention that a number of employees in paper mills have been thrown idle. The mills in the centre of the disturbances include the Shanghai Paper Mill, Pootung, which has three machines 90 ins. wide and is engaged on the production of tissues, M G. caps and wrappings. The output is 105 tons per week. There are several other mills in Shanghai, including the Imperial Paper Mill.

THE Costa Rican Customs Tariff contains a provision to the effect that the minimum duty to be levied on a postal parcel is 1 colon. This provision has been modified by a Decree (No. 9) of April 13th, published in *La Gaceta* of April 15th, which provides that when printed books, catalogues, printed music, advertisements and samples without value are imported in postal parcels or registered boxes, they are to pay a minimum duty of 1 colon per 10 kilogs. or fraction thereof, without taking into account the number of packets.

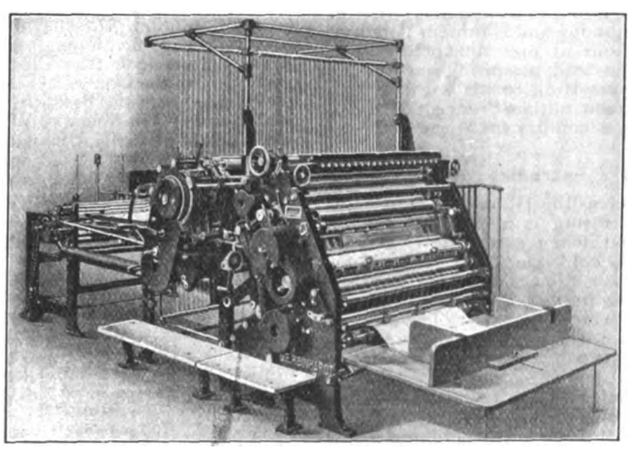
What our Manufacturers are Doing

Printing Machinery and Other Products that Merit the Attention of Overseas Buyers.

Machinery: Intertype Ltd.

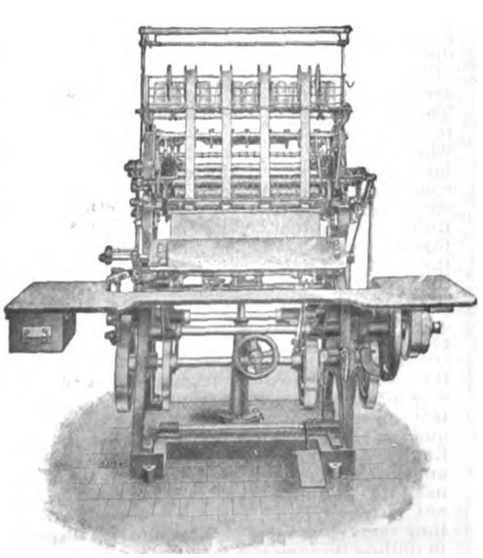


Of interest to printers, whether at home or overseas, is the new Intertype Mixer, shown for the first time in Britain at the recent Printing Exhibition. This mixer equipment has been designed to meet the wishes of a number of British Intertype users, who undertake complicated letterpress work, such as catalogues and dictionaries. By its use eight distinct faces can be assembled in one line. The machine is built up from the Intertype basic unit and all corresponding parts are interchangeable with other Intertype equipment. Existing Intertypes of any description can be converted into mixers. The mixer carries two standard 90 channel magazines and may be used with or without a two-magazine side unit, which is also a mixer. The matrices from all these magazines may be drawn at will from the keyboard with the aid of a single and sensitive lever action, mounted at the keyboard. The finger lever shifts the keyboard reeds back and forth so that they engage either of two sets of escapement reeds above them. The assembler entrance is double at the top, leading into one entrance at the bottom. The magazines are stationary when in operation and are removable in the manner common to all Intertype construction. The assembler entrance, which guides the matrices from the magazines is also stationary, so that the alignment of all parts is fixed and rigid. A novel arrangement of keyboard reeds makes it possible to use a maximum width of matrix fount in either upper or lower magazine without increasing the width of magazines. The distributor is double, having a total of five conveyor screws of half-an inch pitch. There is only one distributor box, and this box is automatically registered to either distributor as occasion requires. The shifting of this box, which takes less than one second, is done by a mechanism designed for the purpose and the matrices are not called upon to go through any movements other than those common to the simplest of these machines. The same is true of the keyboard and escapement parts. When composition is confined to matrices from one magazine only the operation of distributing is carried on in exactly the same way as on any other Intertype. The only change in the matrices is the cutting of the regular fount notch one thirty-second of an inch deeper and the addition of another fount notch. Matrices cut for the mixer may be run in an outstanding Intertype without change. The side unit carries the widest side magazine yet made and will hold from the smallest matrices to 36 pt. wide, of 34 characters each. The main and side keyboards together comprise 124 keys, all available at once. Four faces of 90 characters each in two 2 letter founts may be carried in the main magazines. Two display faces of 34 characters each may be carried in the two side magazines or a full fount of 68 characters by putting lower case in one of the magazines. The mixer without side magazines will be known as the "Intertype with standard equipment E." With the side magazines it will be known as "Intertype with standard equipment E sm 3."

Machinery: Canadian-American Machinery Company.

The Canadian-American Machinery Co. report that the interest shown at the Printing Exhibition, and the large number of sales resulting from it, have proved conclusively, if further proof were required, the popularity of the unique Cleveland folding machines and their superiority over older types of folders. Passers by at the Exhibition were naturally attracted at the novelty of the folding method and it only required proof of the productivity and dependability of the Cleveland folders in actual practice, to convince inquirers that Camco Cleveland folders are bound to effect a big saving. That proof was forthcoming in the words of printers who have been using these folders for several years. Another new machine which created considerable interest was the double demy Kelly press, and several printers immediately appreciated the advantages of combining the Kelly superiorities of high speed and supreme printing qualities in a machine larger than the 17 in. by 22 in. press which has gained already great popularity in this country, *i.e.*, double demy size. Binders were much intrigued by the new departure shown on the Camco stand in the shape of the Ledeuil wrappering machine. This machine automatically applies paper covers to books, magazines and journals at a speed of 1,600 per hour, which represents the output of about six girls doing this operation by hand. The Ledeuil wrapper was demonstrated throughout the Exhibition in full working order.

Machinery: Soldans, Ltd.

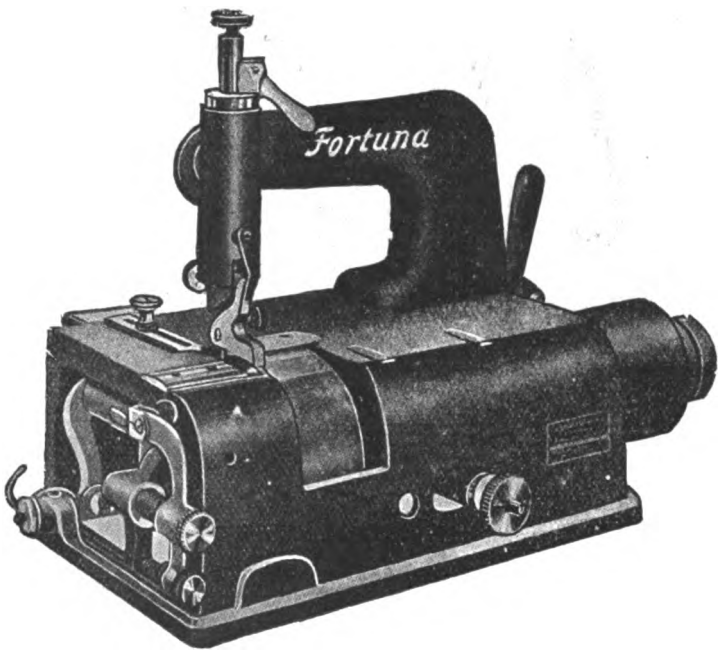


An extremely interesting machine, which is destined to have a far-reaching influence in the production of ruled and printed work has recently been demonstrated in London at the showrooms of Messrs. Soldans, 44-46, Eagle-street, W.C.1. The first machine of this type was built to the order of a large account-book factory by Messrs. G. E. Reinhardt (Foerste and Tromm) as long ago as 1910, and is still running to day. While the principle of the construction remains unaltered, the present-day machine naturally incorporates vast improvements in the realm of ink distribution, general accessibility and ease in handling. The Rulex Tandem (Flakoli) is provided with a flat chase fitting on a rotary cylinder, and equal inking is obtained by an ingenious rise-and fall motion of the latter. Ordinary type matter is used and the requisite quality of impression for high class account book work ensured. A depth of heading of 3½ in. can be printed from type, thus dealing with 95 per cent. of this class of work. The remaining portion of the impression cylinder can also be brought into use by fastening on curved electros for printing footnotes, simultaneously, or by using stereo plates. A variety of work of different papers was done on the machine at Messrs. Soldans, Ltd., and left nothing to be desired in the quality of either the ruling or the letterpress. The speed is from 2,400 to 3,000 per hour, and when it is considered that the capital cost and time of operating a separate machine for one complete operation—either down line ruling or letterpress printing—are saved, the advantage of the new machine is obvious. An important feature of the machine is the fact that all register troubles as between ruling and printing are done away, the printing being controlled by the action of the "gate" on the ruling machine. Much interest was aroused in the machine, and those desiring full information should address themselves to the sole agents, Messrs. Soldans, Ltd.

The Rulex Tandem (Flakoli): Soldans, Ltd.

Machinery: Oscar Friedheim, Ltd.

Messrs. Oscar Friedheim, Ltd., of 25, Waterlane, London, E.C., report a great success with their new flat bronzing machine introduced to the market some little time ago. The machine satisfactorily bronzes, burnishes and dusts off in one operation all classes of paper, cardboard and even metal sheets up to a thickness of $\frac{1}{16}$ inch. The machine fulfils every requirement of the Factory Act, being absolutely dustless in working; no outside flue is necessary owing to a suction principle which works while the machine is in operation and which draws all surplus bronze from all parts of the machine back to a collecting box. By these means a great saving of bronze is maintained, as the surplus out of the collecting box can be put to further use. There are no grippers on this machine, which increases the output greatly; the interval between each sheet is reduced to a minimum and at the same time the length of sheet is unlimited. A number of these machines have already been installed in many of the leading printing houses, where the utmost satisfaction is being obtained. A new and up to-date folding machine is now on the market and Messrs. Friedheim are having a busy time with it, having, they tel us, secured repeat orders from large factories where the machine has stood a severe test. These machines are capable of dealing with all classes of paper, including glazed art paper, and are fitted with an effective arrangement for the prevention of creasing. In several cases the rotary continuous feeder "Spiess



Simplified Book-Sewing Machine: Oscar Friedheim, Ltd.

Digitized by Google

Patents" have been fitted, giving an output of 30,000 sheets folded in eight hours. The machine can also be supplied with hand or semi-automatic feed. Friedheim's new model simplified book sewing machine, without needle heads, proved an interesting feature at the recent Printing and Allied Trades Exhibition, where a number of orders were secured. These machines are now being constructed in a number of sizes and cover every variety of sewing, and on account of their low price and absolute simplicity they have found a very ready market. It is now well known that Messrs. Friedheim are in a position to supply the latest and most up-to date Continental envelope and bag-making machinery and many very large orders are now being executed. Repeat orders are constantly being received for the other lines handled by Oscar Friedheim, Ltd, namely rotary cutting machines, combined rotary, cutting, scoring and creasing machines, corner staying machines, blocking and embossing presses, guillotines and trimming machines, etc.

Machinery: R. Hurner, Ltd.

Messrs. R. Hurner, Ltd., agents for Gebr Brehmer, continue to extend and improve the various lines of machinery they handle. As regards their book sewing machines, the No. 38¼, which has met with very great success, has now been further improved by being made able to sew up to 70 sections per minute. This machine can now also be supplied with

"Fortuna" Skiving Machine: R. Hurner, Ltd.

movable heads if required. The setting up and working is simplicity itself, and the machine can be thoroughly recommended for binderies where speed is of first importance. The machine illustrated herewith, the "Fortuna" leather skiving machine, for which Messrs. Hurner are sole agents, is fitted with special raising and lowering attachment, and will skive or split any width up to 1⅜ in. or 2 in. With this attachment fitted it is possible to skive, split or groove from or to any point without commencing or finishing at the edge of your material. The machine can be stopped instantly at will, and the material removed without fear of damage. The inside edges of apertures, such as photo frames, etc., can be skived with ease. By movement of a single lever, the presser foot is lifted clear of the machine table, thus facilitating rapid change. The machine well deserves inspection by those interested.

Art Platen: W. J. Light and Co, Ltd.

Of special interest amongst platens is the new "Monopol" art platen printing machine, Models 0, 1, 2, 3, now being marketed by Messrs. W. J. Light and Co., Ltd., of 36-38, Whitefriars-street, E.C.4. This machine, which embodies the very latest improvements is of exceptionally strong construction throughout, and has a number of special advantages. The base is cast in one solid piece, with wide split bearings to take the steel main shaft, and permitting easy examination or removal of same at any time. The platen motion can be minutely regulated, thus avoiding slurring. Provision is made for easy release of the forme, and the machine is provided with improved gripper mechanism. Central adjustment of impression allows the most minute regulation. Automatic side-lay ensures perfect register even with careless feeding. The motion of the roller carriage is smooth and noiseless, and is effected by special gear wheel drive. This improvement does away with the cam action in the main gear wheel, which is subject to great wear, and eliminates all consequent shake and slur on the roller carriage. The roller carriage can be thrown out of action whilst the machine is working, and the very latest improvement enables all the inking and distributing rollers to be separated from each other and from the inking cylinder by a single lever movement. The roller bearings are exactly parallel, and the runners can be adjusted independently. A special feature of the inking apparatus is the separate drive which, by a single lever movement, enables the inking rollers to revolve without the platen or any other part of the machine moving. This is of great advantage when inking up, and adds very considerably to the life of the machine. This improvement is of further great advantage when the machine is required only for embossing, or similar work not requiring the inking rollers, as the latter then remain quite stationary and do not require to be removed. The inking apparatus is of the most improved cylinder type, the inking rollers are of large diameter, and a most even distribution is obtained. The ink duct can be minutely regulated, and is fitted with flexible knife. The forme is supplied with fresh ink both during the downward and upward movement of the roller carriage. The machine is fitted with a safety arrangement against damage to the roller carriage.

Offset Machinery: George Mann and Co., Ltd.

One of the outstanding features of the recent Printing Exhibition was the "Mann" Baby offset machine with automatic suction pile feeder, a product of the old-established firm of George Mann and Co., Ltd., lithographic machinery specialists, of Leeds and London. The great demand for a machine capable of dealing efficiently with short runs led to the construction some years ago of the "Baby" rotary offset, the design of which makes it particularly suitable for this purpose. This small, rapid, and easily operated machine possesses all the refinements which have made "Mann" rotary offsets famous. From 10 to 15 minutes only is required to change from one job to another in the same colour. Printing 10-20 different jobs totalling 7,000-10,000 sheets is the usual occurrence in an ordinary working day. For continuous running, 45 reams per day is a customary output. A convincing fact proving its value is that several hundreds are in use—as many as ten in one establishment—where they have replaced three times that number of large flat-bed machines. Hand-fed, the Baby is usually run at 3,000-3,500 impressions per hour. Ample time being available for feeding the sheet, this is a practicable speed, but by no means the maximum obtainable. An automatic suction pile feeder has therefore been designed for use with the Baby offset to enable the operator to obtain the maximum output from the machine—up to 5,000 impressions per hour. Very effective up to high speeds, exceedingly simple to set, and entirely automatic when running, this feeder is admirably suited for the Baby machine, whether used for long or short runs.

The design of the Baby offset is a singularly happy combinatien of the advantages embodied in the single and two-revolution types of offset machines; having three equal sized cylinders, it gives the maximum output per cycle, and retains the following special control features, which make "Mann Standard" offsets universally popular, particularly with operators, viz.: (1) Access to plate between damping and inking; (2) delivery of sheet printed side upwards, at a very convenient height for inspection; (3) damping away from feed board and situated immediately below inking; (4) ink fountain and duct roller at a very convenient height for inspection. Point one is of particular value, and is fully appreciated by practical lithographers. It enables the minder to correct scumming or other defects on the plate without tripping, or alternatively avoids the necessity of printing a number of waste sheets, practices unavoidable in other makes.

Machinery: Smyth-Horne, Ltd.

These well-known machinery dealers who had their usual big stand at the recent Printing Exhibition, and also another stand adjoining, were exhibiting a number of their well known labour saving machines, amongst which were several new machines of interest to oversea buyers, such as the Smyth No. 10 book sewing machine. This is the Smyth Manufacturing Co.'s latest sewing machine, and it is made on their well-known four feed-arm principle, the arms being made with the new duraluminn metal which is very light and at the same time rigid. The sewing mechanism has been greatly simplified; there are no hooks, and a novel idea is that it is arranged to sew through both edges of the tape. This keeps the tapes flat, and makes the forwarding a very easy matter. This machine is designed to run at the enormous speed of up to 80 sections per minute, fed on the rotary system, and it has been found that, after a little practice, the girls can easily keep the machine going. The Smyth Improved No. 3 book sewing machine, which has been on the market for over 40 years, has from time to time been altered and improved upon, and is a very popular sewer for letterpress work. The Smyth No. 4 book sewing machine has been on the market for 35 years, and has likewise been improved and altered, and still holds its premier position for general work, letterpress books, and religious books. The Brackett stripping and binding machine, new model 2A, has been shown for the first time in Europe, and has proved of enormous interest to the wholesale bookbinders and stationers, as it is especially suitable for pads, tablets, end sheets and sections, guarding and joining together of paper sides for toy book work, either for the cloth back strip or two boards can be fed in and joined together by the cloth or paper back or gauze. The machine is capable of enormous economy. The Seybold strip and label cutter, 44 in. model, embodies an important new feature. The Seybold folks have been chiefly concerned in the designing and building of paper cutting and book trimming machines for over 40 years, and have been experimenting with this device for attachment to their cutters. This has already met with very big success in America, China and Japan, and was shown for the first time in Europe at the Exhibition. It aroused considerable interest among label printers and others that do a similar class of work, especially the clever method of advancing the back gauge. The Christensen wire stitcher feeder with four stations—which is capable of being operated by four girls, with two Boston Stitcher Heads, at the rate of 4,000 to 7,000 journals per hour—rouses much admiration by its smooth working at high speed. In regard to the Lindbladh Duplex "L" pen ruling machine, Messrs. Smyth Horne claim that this new machine, with the Frohn air wheel feeder attached, is the biggest advance in pen ruling machines that has taken place in the world during the last fifty years. There are already several installed in this country, and a big firm who have been using an outfit for a few months ordered a repeat at the Exhibition, and one of the biggest London rulers installed the Exhibition machine. Much satisfaction has been given, too, by the G.R.S. press continuous feeder (shown at the Exhibition attached to an L & M Miehle press). The smoothness of the whole outfit drew

admiring comments from many visitors. There are several of these working in this country, and a number of repeat orders have been received.

Printing Inks: Shackell, Edwards and Co., Ltd.

Three-colour printers will be interested to know that this firm has just issued a new set of trichromatic inks, known as the "Exhibition" series. The special feature about these colours is that when all three are superposed they give a perfectly dense black. In coloured illustrations it often happens that some portion of the picture needs to be really black, and hitherto a fourth working has usually been necessary to attain this result. A specimen showing the effect obtainable with the "Exhibition" three-colour inks will be posted to any printer writing for same.

Paper in India.

Larger Import Trade.

Some useful comments on the trade of India are contained in a report which H.M. Senior Trade Commissioner in India (Mr. T. M. Ainscough) has forwarded to the Department of Overseas Trade. The period covered by the report is the complete statistical year to March 31st, 1925.

The following paragraphs concern paper and pasteboard:—

Paper and Pasteboard.

PACKING PAPER.—The total trade advanced from 21 to 28 lakhs. Germany increased her share from 7 to 11 lakhs. The United Kingdom supplied 4 lakhs and Sweden 4 lakhs.

PRINTING PAPER.—Here again a considerable advance in the total trade is to be recorded, the imports rising from 86 to 114 lakhs. The British proportion rose from 27 to 29, the Norwegian from 20 to 22 and the German from 23 to 35 lakhs.

WRITING PAPER AND ENVELOPES. — The total trade declined slightly from 56 to 55 lakhs. The British share shrank from 35 to 32 lakhs, that of Germany rose from 8 to 10 lakhs, that of Norway from 3 to 2 lakhs, while the Netherlands remained stationary at 3½ lakhs.

Statistics relating to machinery and mill work show that paper mill machinery imported in 1924-5 was of the value of 7 Rs. (lakhs) against 6 Rs. (lakhs) in the previous year.

With regard to dyestuffs obtained from coal tar, the Trade Commissioner says: The total trade advanced slightly from 251 to 256 lakhs, due to slightly increased takings of alizarines. The German share advanced from 181 to 191 lakhs, while that of the United Kingdom fell from 27 to 8 lakhs. In addition to the arrivals from Germany, imports from Holland of 23 lakhs and from Belgium of 16 lakhs are also recorded. These are presumably German dyes shipped from Dutch and Belgian ports. American shipment showed a slight decline from 11 to 9 lakhs.

Sixty Years of Printing.

In celebrating the diamond jubilee of their business career, Messrs. J. and H. Bell, Ltd., of Nottingham, hit upon the happy idea of taking all their employees to the recent Printing Exhibition at the Agricultural Hall, London. The party, numbering between 50 and 60 persons, made an early start from Nottingham, taking breakfast on the train, luncheon in the city, and supper on the train home—a long day surely, but full of interesting investigation and useful experience.

The whole of the arrangements were directed by Mr. A. E. Moore, whose 40 years' services with Messrs. J. and H. Bell, Ltd., were subsequently recognised by the presentation of a Jacobean Bureau Desk bearing the inscription, "Presented to Mr. A. E. Moore by Messrs. J. and H. Bell, Ltd., on the 60th anniversary of the firm and in recognition of his 40 years' service." Presents of two clocks similarly inscribed were made to Mr. J. T. Newton (composing-room) and Miss A. Hill (binding department).

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

CITY OF BIRMINGHAM EDUCATION COMMITTEE.

CENTRAL SCHOOL OF ARTS AND CRAFTS.

WANTED, in September, TWO WHOLE-TIME MASTERS for:—

(1) Typography, Compositors' Work; some teaching experience and a knowledge of machinery are desirable.

(2) House Painting and Decorating; revised Burnham provincial technical scales—£234-15-£480, or £186-12-£384, according to qualifications; in fixing the initial salary allowance will be made for industrial and teaching experience.

Forms of application may be obtained from the Secretary of the School, Margaret-street, and must be returned to the undersigned not later than the 25th June.

P. D. INNES.
14638 Chief Education Officer.

Bookbinders' Overseer.

Hazell, Watson & Viney, Ltd., require an Overseer for their Cloth and Magazine Bindery at Aylesbury. Only those considered who have had control over large staffs, who are familiar with the latest binding machinery and have intimate knowledge of binding on a large scale. Write describing fully training and experience and stating age to

Mr. R. C. HAZELL,
The Printing Works, Aylesbury, Bucks.

PRINTING WORKS MANAGER wanted for Responsible Position; see displayed advertisement on page 511.—Box 14641.

TRAVELLER for PRINTING wanted, by old-established House; must have a sound connection for Publicity Printing; salary and commission.—Write, Box 14639.

Machinery for Sale.

MULTI-COLOUR MACHINE, takes sheet 10-in. by 8-in., complete with motor. Price £80.

Quad Demy REVERSUS (Dawson), fitted Rotary Slitter and Klimsch Counter; Slogger Feeder. Price £300.

Double Demy Converted OFFSET LITHO MACHINE, by Furnival. Price £50.

BREHMER FOLDING MACHINE, Quad Crown, complete with Camco Feeder, two, three or four-fold. Price £250.

THREE SECTION-FOLDING MACHINES, by Krause; maximum sheet 30-in., minimum sheet 8-in.; speed 2,500 sections per hour. Price £30 each.

DRILLING MACHINE (Strong, Bristol). Price £3.

RUPERT BUNDLING PRESS. Price £2 10s.

TWO GOLD-BLOCKING PRESSES (O. Friedheim); maximum size 10-in. by 8-in. Price £20 each.

END-SHEET PASTING MACHINE (Brehmer). Price £15.

32-in. GUILLOTINE CUTTING MACHINE, by Furnival. Price £40.

ROTARY SLOT-PERFORATING MACHINE, by Hobbs Manufacturing Co.; for run-through or stop work; takes sheet up to 30-in.; complete with six perforating wheels; fitted for power. Price £40.

All the foregoing machines are in full working order, and may be seen running by appointment with the FACTORY MANAGER, Messrs. E. J. ARNOLD AND SON, LTD., Butterley-street, Hunslet-lane, Leeds.

All offered subject to intermediate sale. Any reasonable offers will be considered. 14640

VICKERS' BOX STITCHER (Power), 13-in. arm; warranted good order; £35.—Caxton, 74, York-street, Glasgow. 14625

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Miscellaneous.

OLD-ESTABLISHED London Firm with City offices are prepared to make arrangements with Provincial firm having Monotype Plant to execute large orders.—Box 14629.

Situations Wanted.

BOY to APPRENTICESHIP for five years; Printing preferred; small premium offered.—C., 26, Khartoum-road, Ilford, Essex. 14633

PLATEN MINDER, all-round, 10 years' experience; disengaged.—L. Daniels, 163, Sellincourt-road, Tooting, S.W.17. 14636

A PLEASANT incident in relation to the recent Printing Trades Exhibition occurred on Thursday evening last, when Mr. John Fry, the proprietor of Fry's Metal Foundry, invited the members of his staff resident in London who were engaged at the Exhibition, to dinner at the Florence Restaurant, and afterwards took the party to the Coliseum. Mrs. John Fry joined the party to the delight of all present. There were no speeches and everything was charmingly informal. Mr. Fry also presented a small memento to each of his guests in the form of a fountain pen.

MESSRS. JOHN WADDINGTON, LTD., of Leeds, have been responsible for the production of large posters for many well-known companies. In fact, large-size work is one of their special features. Their latest effort is the enormous and entrancing poster which has just appeared for the British Empire Exhibition. The size of this work is 96 sheets double-crown, or 40 ft. long by 10 ft. high. Twenty-four separate sheets measuring 60 in. by 40 in. were necessary to complete the order The number of colours was on the average ten and in some portions twelve or thirteen.

The Trade Outlook.

THE Board of Trade returns issued last week-end do not indicate any very startling movement in the country's trade, but are on the whole rather depressing, though not without encouraging features. Slightly increased exports and reduced imports were the features of British trade in May by comparison with the figures for April. Exports were up because April was a bad period month—the worst for 18 months. In comparison with a year ago, both exports and imports show declines. Items particularly interesting to the printing and allied trades, however, are in a much more favourable position, exports of printing matter being well maintained, and both imports and exports of paper and stationery being highly satisfactory. Such indications are in line with the current state of our particular trades, as evidenced, for instance, in the figures for unemployment in the printing industry, which are much more favourable than those of trade in general. Thus, though we must all deplore the failure to place our country's commerce upon a more hopeful level, we may well be encouraged by the comparatively happy condition of the printing and allied trades.

* * *

Our Lost Supremacy.

THE question now being raised and discussed in many industrial and commercial circles is whether we as a country will ever regain our lost supremacy and command over a great part of the world's demand. Undoubtedly the situation is becoming serious. British goods, including British machinery, are highly esteemed wherever they are used. Generally speaking, British trading methods are equally well appreciated, although we have still to learn something about fitting in with the customs, peculiarities and special requirements of certain foreign markets. In this particular direction Germany takes the lead and trains her foreign salesmen and agents in a much more assiduous fashion. Perhaps the closer linking up between industry and Government in countries like Germany and America gives them an advantage over a country like our own, where Government seems to be very little in sympathy with industry. Not that we wish for any repetition of that business government which earned so few laurels for itself towards the end of the war.

* * *

Burden of Taxation.

CHIEFLY, for years past, the main energy of the Government of this country has been directed to the extortion of revenue from industry. First the E.P.D., then the Corporation Duty, then the increased income tax, plus a general raising of poor rates and a tightening up of valuations for purposes of revenue. Opportunities to develop trade, such as were presented at the famous conference with Colonial administrators, have been neglected, and the machinery introduced by Safeguarding Acts and Reparation Duties has worked very little to the interest of the British manufacturer.

* * *

Australian Preference.

SERIOUS concern continues to be felt by Canadian news-print manufacturers at the delay of the Federal Government in submitting for ratification the Australian trade treaty. The delay is caused by the fact that the Canadian Government objects to the Australian interpretation of some of the clauses, and particularly to the interpretation that in order to secure preference for Canadian goods as British products they must have been manufactured to the extent of 75 per cent. in Canada. The Canadian Government has sent a representative to Australia to endeavour to get a modification of the clauses objected to, and have expressed a hope that there may be a favourable result in time to permit the ratification of the agreement during the present sitting of Parliament. Meanwhile the duty of £3 per ton continues to be levied against Canadian news-print. Canadian manufacturers estimate that they should get at least one-half of the market, and that through the delay they are losing $10,000 a day, or $3,000,000 a year. The establishment of many new news-print plants in the United States has brought about over-production, both present and prospective, and new markets are urgently required. It is pointed out that Newfoundland is becoming one of Canada's foremost competitors, not only in the United States, but elsewhere, and that this country is now seeking Australian preference. It is feared that if the treaty is not ratified in the present Parliament, Canada will lose the Australian market altogether.

* * *

Paper Scarcity Predicted.

IN these days when there is such general complaint of poor trade and the slow movement of paper stocks, it is rather startling to hear predictions of a scarcity of paper. Those who look ahead, however, are convinced of such an eventuality. Thus prospects of a paper famine in the United States were discussed recently by Mr. Leon Beck, president of the Charles Beck Paper Co. He predicted that it was but a matter of a few decades before the paper supply in raw materials in America would be exhausted.

Hours and Wages in Australia.

The following figures show the "weighted" average nominal weekly wages and hours of labour worked by Australian printers, classified in the "books, printing, etc.," group of trades as at September 30th:—Weekly wage: N.S.W., 96s. 5d.; Victoria, 94s. 7d.; Queensland, 93s. 7d.; South Australia, 96s. 4d.; Western Australia, 95s. 10d.; Tasmania, 95s. 1d. Working hours: New South Wales, 46.95; Victoria, 47.48; Queensland, 45.24; South Australia, 48.00; Western Australia, 47.60; Tasmania, 47.65. Hourly wage: New South Wales, 2s. 0¾d.: Victoria, 2s.; Queensland, 2s. 0¾d.; South Australia, 2s.; Western Australia, 2s. 0¼d.; Tasmania, 2s.

Afterthoughts on Buxton.

Interesting Discussion by South-East London Master Printers.

In the absence of the president (Mr. H. R. Grubb) Mr. J. Lack presided over a meeting of the South-East London Master Printers Association on Tuesday, June 9th, when a discussion was introduced by the chairman on "Impressions of the Annual Meetings at Buxton."

Mr. Lack described the conference as an ideal combination, being part work and part pleasure. While he did not find fault with the scope of the social side of the gatherings, he thought there was not too much time for business.

Referring to the Costing address by Mr. Sessions Mr. Lack recalled that gentleman's observation that it paid better to do less work at good prices than a lot of work at low prices. Asking whether this was the best policy, the speaker recalled the advice of the President of the Board of Trade on the previous evening that retailers should do as much work as possible at the smallest profit in order to provide work. A lot of time had been spent at Buxton on discussing how to get more correct estimates, but none on how to get work without competition. (Laughter). In his opinion he thought that was a mistake, because the time could have been spent much more profitably on how to get customers without giving competitive prices. (Laughter). Mr. Sessions made a good point when he suggested that they should take out records of every machine and every operation week by week and estimate accordingly and that they should alter their machine rate and their composing rate each week in keeping with the amount of work they could turn out under different conditions. Whether that would be possible and practicable remained to be seen.

Mr. Lack went on to take up some of the points made by Mr. Eaton Hart and mentioned that in small offices a "standing jobs book" was not usually kept, but he had it introduced as soon as he returned from Buxton. He thought this would effect a considerable saving of time. The speaker also approved of keeping a book recording the details of previous contracts. These, if kept up-to-date, would prevent misunderstanding and wrong charging.

The impression he had received from Buxton was that they were all members of no mean organisation. It was quite an education to the small printer to see what the Federation was doing and to make acquaintance with the men who were at its head. While the Federation might have its faults, it was an organisation second to none in the country as regards personnel, while an excellent spirit ran right through from the big man to the small man.

One point that struck him at the Cost Congress was the observation that if they did three-thirds of their work at a profit they got three-thirds profit, while if they did one-third of the work at a loss they did not make two-thirds profit, as might be imagined, but only one-third at a profit, because one-third had to counter-balance a loss on the unprofitable one-third. Therefore, in that case there was only one-third profit on the whole of the work.

With regard to apprentices, the speaker described this as a pressing problem and mentioned that the majority of the large offices were not taking their proper quota of apprentices at the present time. The point was made that the small offices should take their full proportion. The speaker emphasised Mr. Howard Hazell's reference to three months' probation and to the review of indentures every six months.

The standardisation of paper was another important matter dealt with, Mr. Lack observing that now there was a chance that the papermakers and the wholesale stationers would agree to the basis arrived at and that in the near future standardisation would be an accomplished fact.

Collective Advertising.

Complaint was made that no opportunity was afforded of discussing collective advertising. Mr. Lack thought the time spent on estimating would have been better devoted to the best means of advertising the craft. If there was no time to discuss such an important subject then the time of the conference should have been extended.

The chairman also mentioned that it was stated in the general report of the annual meeting that of the £12,000 income £7,000 was received from London, while the London Alliance had 23 representatives on the council out of 98, eight out of 42 on the Labour Committee and five out of 35 on the Joint Industrial Council. The abiding impression that he brought from Buxton was that he was proud to belong to an organisation such as the Federation of Master Printers. (Applause).

Mr. F. H. Cole (South-West London), in opening the discussion, challenged the chairman's impression of Mr. Sessions' reference to unprofitable work. Mr. Sessions point was that they should eliminate the losing jobs and concentrate their efforts on profitable work. With regard to collective advertising, everyone was sorry there was no opportunity of discussing this scheme, but since the Conference the Collective Advertising Committee had discussed the matter and he did not think there would be another conference without half-a-day being devoted to that subject.

Mr. Norman referred to the L.S.C. circular relating to apprenticeship and asserted that if the scheme should come into force it would mean that the large employer, say of 100 to 400 compositors, would have a big pull over the small employer in the proportion of apprentices he would be allowed to employ.

Mr. Griffiths agreed that some of the greater houses did not take their proportion of apprentices. Whether it was beneficial to the boys to be trained depended upon the character of an establishment. In a printing office where they specialised in mechanical composition it was not possible to give a boy an all-round training.

With regard to the suggestion of the president of the Board of Trade that they should endeavour to do as much business as possible with the smallest amount of profit, Mr. Griffiths thought they would not get much of a stir in the printing trade until they got back to the old days of catalogue printing. He thought they might return to that state of things when they got their wages difficulties adjusted, but that was probably the most difficult problem of all.

Mr. Northam approved of the judicious mixture of sociability and business which experience had dictated for the conference.

Mr. J. J. Keliher thought the Buxton conference was one of the most successful ever held. He compared it with the gathering in Glasgow 25 years ago when there was only a small attendance, a proportion of those attending being representatives of supply firms out for business. (Laughter.) The Federation was now undoubtedly an organisation of great strength and had much influence upon everything appertaining to the printing trade. As a trade, however, he did not know that they were in a very much better position. The influence of the trade unions was generally confined to improving the lot of the worker and only from the workshop point of view. Masters, by their everyday experience, he thought, had a wider outlook and were better judges of what was good for the trade from all points. The speaker complained that restrictions were put on the training of apprentices which did not help them to bring about the state of efficiency and skill that was necessary now-a-days. Mr. Keliher contrasted the conditions prevailing in this country with those in America. He approved of the system they had of testing a boy to see for what particular side of the printing industry he was most fitted. This system was also adopted at Southampton-row Technical School. He thought that the action of some trade unions in their efforts to further minimise the number of apprentices and also to restrict their work in the workshop was having a baneful and serious effect upon the efficiency of the printers of the future.

Future Meetings.

The chairman asked for suggestions of subjects to be discussed next session. He himself mentioned apprenticeship, standardisation of paper and collective advertising, about which they could get more information in the meantime.

Arising out of the remark by Mr. Millington, that it was inadvisable to try and take work away from another printer because it would be of no use at the price, Mr. Griffiths thought a night might be devoted to grumbles. Other proposals were made, and the matter was left to the Committee.

Mr. Norman suggested a combined meeting of the associations south of the Thames, which would be addressed by Mr. Howard Hazell, the president of the Federation.

It was agreed to accept an offer of Messrs. Millington's to conduct a party from the South-East Association over their wholesale stationery works at Tottenham in September.

The meeting then settled down to a discussion concerning the recent Inter-District Printing Competition, and many questions were answered by Mr. E. G. Baker, L.M.P.A. assistant secretary.

Leonard A. J. Hills, 23, employed by Messrs. Edward Lloyd, Ltd., Sittingbourne, as a labourer, was engaged with a gang of five other men in unloading logs from the hold of a vessel at Ridham Dock, when one of the logs, which were being lifted in a steel hawser sling, slipped out of the sling, hit the combing of the hatchway, and, rebounding into the hold, struck the deceased on the back of the neck. Dr. J. S. Clark was summoned, and he found fracture and dislocation of the vertebra of the neck, which caused instant death. At the inquest last week a verdict of "Death by misadventure" was returned, and the jury were satisfied with the method of slinging the logs.

An advertisement is always working.

TWO GOOD THINGS FOR LITHO PRINTERS

"L. an B." (RODERZONE) ETCH for ZINC, ALUMINIUM
25/- per lb. Sample Ounce 2/6

"PHIRMOLD" THE RELIABLE WASHOUT.
2/6 per lb., dry. 15/- per gal. (Carriage Extra)

The Repeat Orders received from Lithographic Printers go to prove the efficiency of "L an B" (Roderzone) and "Phirmold."

Printing, Bookbinding and Kindred Trades Overseers' Association.

Monthly Meeting.

The June meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, London, E.C.4. The chair was occupied by Mr. J. Fleming (president), supported by Mr. A. G. Aves (vice-president), and there was a large attendance of members. At the conclusion of a considerable amount of Association business Mr. B. J. Sansom, bookbinding instructor at the London School of Printing, gave an interesting lecture dealing with apprenticeship in the bindery, the lecture being based on an article which recently appeared in the *Manchester Guardian* entitled "Probation." We hope to report Mr. Sansom's lecture more fully in our Bookbinding issue next week.

Following the reading of the minutes, several items of correspondence were submitted. These included letters from Miss Vernom, Mr. E. Robson and Mr. S. J. White, secretary of the Caxton Convalescent Home, Limpsfield.

The last letter contained a report of the work of the Home, to which, and on the proposition of Mr. Tom Hunt, seconded by Mr. A. E. Walters, the Association granted its usual donation of three guineas.

New Members.

The meeting next considered the admission to membership of the following two candidates: Mr. James Frankham (honorary member), general manager of the Fisher Bookbinding Co. (1912), Ltd.; Mr. W. H. Lee, overseer warehouse department, J. Howitt and Son, Nottingham.

Both candidates' credentials having been found to be in order, they were heartily elected to membership, the president at the same time extending to them a warm welcome on behalf of the Association.

The next item on the agenda was the appointment of a deputation to meet the Labour Committee of the Federation of Master Printers on the 16th inst. at Old Bailey, when questions concerning the length of notice of overseers and managers are to be considered. The following were appointed for this purpose: Messrs. J. Fleming, A. G. Aves, A. Cox (general secretary of the Association), Chris. Atkins, J. A. Esler, and W. Fordham.

Scholarships.

The next business was the consideration of a letter from Mr. J. R. Riddell relating to the formation of the new L.C.C. Trade Scholarship, and which expressed the desire that the Association would be identified with the project.

Mr. Atkins asked what money was likely to be required from the Association in connection with the proposed scholarship. He also inquired if anything was being done in regard to the Winterbottom Scholarship.

Mr. J. A. Esler (the Association's hon. technical representative), believed the working of that Scholarship was still on the tapis, and that nothing definite with regard to it had yet been decided.

Mr. A. J. Jones thought if the Association identified itself with the new trade scholarship it would be involving itself in a movement beyond its capacity to afford.

Mr. Atkins further emphasised the point that the Winterbottom Scholarship was given primarily for the advancement of training in the bookbinding section, and thought those who had charge of the administration of it should see that it was not used for any other branch of the trade.

The question of the proposed new scholarship was dealt with by several other speakers, and it seemed to be the general opinion that something definite should have been reported by now regarding the Winterbottom Scholarship. Others thought the trade scholarship, which would probably mean an expenditure of £70 or £100 a year, was too big a responsibility for the Association to consider.

The whole matter was left in the hands of the secretary till the next general meeting, when it was hoped fuller and more definite information would be forthcoming.

Coming-of-Age Celebration.

The members next discussed how best to celebrate the coming-of-age of the Association which falls due this year. In connection with this event it was announced that the King's Hall, Holborn Restaurant, had already been booked for September 25th. The meeting also appointed a committee consisting of Messrs. A. E. Walters, A. H. Smith, and A. J. Jones, to arrange an appropriate programme in connection with this eventful day in the Association's history.

The Lecture and Discussion.

Mr. Sansom, who was then called upon for his lecture, dealt with many of the difficulties of a boy's training in the bindery, and offered many suggestions calculated to remove them. In opening a discussion, Mr. Esler, in referring to the early days of apprenticeship, said they now realised what boys then had to meet with when they had finished their apprenticeship and had to face the world.

Mr. Aves thought the thanks of the Association were due to their late secretary, Mr. G. A. Eden, for sending along the cutting of the *Manchester Guardian* upon which Mr. Sansom had based his remarks.

Mr. Atkins, referring to the habit amongst apprentices of being more fond of reading the contents of the books than of learning the way to bind them (a matter that was alluded to in the lecture), said that it was an interesting fact that Michael Faraday during his apprenticeship as a bookbinder paid far more attention to the inside of a book than to anything else. Had he not done that probably the world would never have had one of its most celebrated scientists. The apprenticeship question he considered a very difficult one, and he regretted to have to come to the conclusion that the practice of learning good all-round bookbinding craftsmanship was fast dying out. This he attributed largely to mass production and sectionalisation of work in large establishments. He was firmly of the opinion that the apprentice in the small country bindery (another matter that was alluded to in the lecture) had a much better opportunity of securing an all-round knowledge of the craft than the one trained in a large bindery. With regard to sewing, a matter which he regarded as very important in the construction of a book, Mr. Atkins said that books sewn by Roger Paine were as good to-day as ever. Such a thing could not be said of the majority of books to-day. In concluding, the speaker thought much could be learnt by the apprentice in a technical school about the different branches of the bookbinding craft which he would never meet with in the workshop.

A cordial vote of thanks to Mr. Sansom for his very interesting lecture was proposed by the chairman and seconded by Mr. A. Cox and heartily carried.

Visit to Croxley Paper Mills.

The annual outing of the Association took place on Saturday, when a visit was made to the paper mill of Messrs. John Dickinson and Co., Ltd., Croxley, Herts. Favoured with ideal weather, and thanks to excellent arrangements, the outing proved one of the most eventful in the annals of the Association. Among those who accompanied the party were Messrs. J. Fleming, C. T. Atkins, A. G. Aves, W. F. Cribb, A. Cox (secretary), F. E. T. Fox, G. J. Hellery, T. Hill, T. Hunt, F. J. Hess, A. J. Jones, W. T. Lingham, B. J. Sansom, A. M. Taylor and A. E. Walters.

Proceeding to Croxley Green by train, the party had a pleasant walk of about ten minutes to the mill gates, where they were met by Mr. F. Heckford, chief chemist of the mill, who immediately assumed command. He quickly made friends with the new arrivals, and then very expeditiously divided the party into small groups, alloting to each a guide. From then onwards till about 5 o'clock a thorough inspection was made of this very extensive and up-to-date mill. In spite of the somewhat torrid temperature without, no reluctance was shown by the visitors to inspect every department of the mill, including the power house, which is capable of developing 4,000 horse power, and the gigantic furnaces fitted with automatic stokers.

Great interest was exhibited in the various sections of the mill. Particular attention was shown in the many operations involved in extracting the ultimate fibres from the rags, esparto, sulphite wood pulp, etc. The washing and bleaching operations were watched with great interest, as were also those carried on in connection with the boiling of the rags, which were automatically fed into mammoth spherical boilers. A thorough inspection was then made of the beaters in which the pulp is mixed and beaten ready for the papermaking machine.

Seven machines were in operation producing many of the celebrated brands of the paper that emanate from this old-established concern. Of particular interest was a non-shake cylinder machine, which is regarded as the oldest machine in the country, if not in the world. Many of its parts were invented by the original John Dickinson, and according to Mr. A. Freeman—who is proud of the fact that he has been operating the machine for nearly 40 years—it holds its own against any machine for certain grades of paper. At the present time it makes the paper for Dent's Everyman's Library. A characteristic of the machine is that it makes a sheet with the grain all one way. At the time of the visit it was operating on a good 35 lbs. demy antique.

After an examination of the calenders, slitters and cutters, an inspection was made of the fine new stock and office building which is in course of erection, and which will be complete in about six months time. These commodious premises, which are to take the place of those burnt down a short time ago, are extremely well lighted and up-to-date in every way, thought being given in the construction both to the comfort of the worker and the rapid transport of the finished product.

From the mill the party had a delightful walk of about 50 minutes along the bank of the River Gade—upon which the mill stands—and the Grand Junction Canal to the Dickinson Institute at Croxley Village. Here a well-earned tea was served under the chairmanship of Mr. J. Fleming. Among those present connected with the mill were Mr. M. Skeins, Mr. F. Heckford, Mr. Cyster (superintendent of the half-stuff and chemical works), Mr. H. Arnold (chief town salesman), Mr. E. Asprey and Mr W. T. Staples.

After an excellent meal, the chairman, in proposing a vote of thanks to Messrs. John Dickinson and Co., Ltd., asked Mr. Skeins to convey to the directors of the company the very best thanks of the Association for the instructive and entertaining afternoon they had been able to spend at Croxley. He thought the directors and the whole of the mill employees were to be congratulated on the efficiency of the plant and the work. He had never seen a mill in a better condition. After expressing their gratitude to Mr. Heckford and the other guides for the patient way they had described the different processes of papermaking, Mr. Fleming said the conditions prevailing amongst the workers at Croxley reminded him very much of a happy family. The social life that was developed at the Dickinson Institute and the sport that was encouraged by the management all helped to bring about and maintain that good understanding amongst all sections of those engaged at the mill. (Hear, hear).

Mr. Aves seconded the vote of thanks, which was very heartily accorded.

Mr. Skeins, in reply, said that when a member of the Association (Mr. Hills) made a suggestion that they might visit Croxley, he jumped at the idea. Mr. Skeins proceeded to say that at Croxley they were proud of their mill and believed there was no better in the country. They were truly a happy family and they worked splendidly together. They had their differences certainly, and, as the chairman had remarked, the dances at the Institute and the social amenities that were cultivated quickly dispelled them.

An impromptu concert, arranged by Mr. A. J. Jones, then took place, some capital musical items being rendered by the following: Little Miss Pamela Hess, Mrs. Gayler, Mrs. M. Hunt, Miss Chiverell, Miss Fox, Mrs. Kennedy, Messrs. T. Hunt, M. Hunt, W. Gayler, Clark and F. E. T. Fox.

In moving a vote of thanks to the artistes, the chairman said Mr. Jones had arranged one of the finest impromptu concerts ever held by the Association.

The vote of thanks was seconded by Mr. A. W. Hunt, who expressed the thanks of the Association to Mr. T. Hill and the stewards.

Diversions such as dancing at the Dickinson Institute and social intercourse generally concluded a very successful and memorable outing.

MR. HAROLD WESLEY, wholesale manufacturing stationer, announces the removal of his factories from Worship-street to Harlesden, N.W. Extensive one-floor freehold premises have been acquired to accommodate his growing business, the new address being Harlesden Stationery Mills, Acton-lane, Harlesden, London, N.W.10. City offices and show-rooms are at 34-40, Ludgate-hill, where Mr. W. Chave, sales manager, has his headquarters.

PRINTING INKS
MADE TO SUIT YOUR
SPECIAL LOCAL CONDITIONS

WE have for many years specialised in the manufacture of inks to suit the varying climatical conditions obtaining in colonial and foreign countries, and this exceptional knowledge of local requirements enables us to supply you with inks that can be relied upon to work perfectly on *your* machines.

All inks are carefully tested before despatch, and are specially packed to ensure perfect condition on arrival.

For whatever process printing ink may be required, we have the right inks, in the right colours, and of the right working qualities—*and at the right price.*

The Printer's Estimating.

MEANS TO BE ADOPTED TO IMPROVE IT.

By WILLIAM H. SESSIONS (of the Ebor Press, York).

Of prime importance to printers at home and overseas is the problem of preventing the losses that occur through faulty estimating. The following is the practical and helpful address on "Means to be adopted to secure Better Estimating," delivered by Mr. Wm. H. Sessions at the recent Cost Congress of the Federation of Master Printers.

Two years ago I brought to the notice of the Cost Congress the fact that the extraordinary variation in printers' estimates was very largely due to mistaken ideas of operational times. Since then, led by the admirable work of the Home Counties' Alliance, the question has been carefully investigated in every part of the country, and I can fairly claim, that although my statements were startling, they have been abundantly proved to be correct.

The next move is to secure better estimating, and, to be Irish, the first step, and a very important one, is to be quite sure we want better estimating; because, if we want anything sufficiently badly we shall soon take steps to bring it about.

How important is this question really to the master printer? Inaccurate estimating does not just mean that an inaccurate estimate secures the order, but in 999 cases out of a 1,000 it means that an inaccurately low estimate secures the order. There is no law of averages to help us to make up on the swings what we lose on the roundabouts. The high, inaccurate estimate brings no profit, for it produces no orders. Inaccurate estimating is all loss to the trade.

It is well to state this boldly, because every printer has a secret tenderness for the low, wrong estimate, because it produces the order. This is wrapped up in the depths of our hearts and not talked about at Cost Congresses, but there it is, that belief in the business philosophy, or rather heresy, of the old apple woman, who said she lost on every apple she sold, but if she only sold enough she would gain.

The point behind this is the fact that the last £1,000 of work done is always cheaper to produce than the first. I believe this point of view has been too much slurred over in the past. It is a fact and we want to face it.

Will you turn to Chart 1?—and may I say, in passing, that although these charts are simple, they are based on many hours, indeed, days, of careful research and calculation into printers' costs, and the relative bearing these costs have on increased production.

My basis is a firm making no profit and no loss, who have enough space, plant and machinery to double their trade—a position of affairs all in favour of the theory of reducing prices to secure extra sales.

The following are the savings in costs secured by the increased trade:—

	50% increase.	100% increase.
Fixed costs ...	— 3. % ...	— 4.5%
Costs mainly fixed	— 5.3% ...	— 8. %
Profit	+ 8.3% ...	+ 12.5%

Look at Chart 2, in which these costs are repeated in a different way, to show the cost of the old and the new trade. The cost of the old trade is 100 per cent., the cost of the new trade is 75 per cent. This saving on the cost lies at the very basis of the argument that it pays to reduce prices in order to secure trade, it lies at the very basis of the heresy that, after all, unprofitable estimates bring work and so will probably really pay. Does it not look in the face of this reduction of 25 per cent. in cost that this firm I have taken could, in order to increase trade, reduce prices 10 per cent. — some might even say, 15 per cent.—and it would pay them?

I have looked very keenly into this, both as regards the firm doubling its trade under the most favourable conditions of having spare space and plant, and as regards the point of further increases, when the conditions would not be so favourable, because extensions would have to be made to meet the increased trade.

Now look at Chart 3, which shows month by month the total profit or loss for the previous twelve months, caused by the doubling of the firm's output in two years (for which it spends nothing on extensions), and increasing it three-fold in four years (the increase of the last two years requiring extra extensions); the top line shows what would happen if the increase had been secured by prices remaining as they were, the next line by reducing prices 5 per cent., the next by reducing them 10 per cent., and the bottom by reducing them 15 per cent.

The result is startling. Whereas looked at only from the fact of the reduction of 25 per cent. in costs on the new work, a reduction of 10 per cent. seemed quite worth while, and 15 per cent. worthy of consideration, we see that 15 per cent. is headlong to bankruptcy and 10 per cent. is a fool's game, in which we only have to extend our business sufficiently to be eventually ruined. Volume of profit and not volume of orders is the test of a safe extension.

You will notice that a small reduction of prices results in some gain and not in loss, but the reduction has to be so small that it would not in itself bring a material amount of increased trade. And here, again, owing to the firm working on a fair and moderate profit already, they would be better off with a two-fold increase at 5 per cent. reduction than with a three-fold increase; for the cost of the new capital would swallow up all the extra profit.

The fact is, and it is one of the most important facts in the printing trade, the almost infinite variety of the jobs which pass through our works need a high relative expenditure in capital, supervision and other overhead expenses. Because of this, extension of business does not bring the same degree of saving in production found in many other industries. The door is closed to us for many of those economies which come from increased production in factories making a few standardised articles. This, too, is the reason why I am so convinced a believer in greater specialisation for the printing industry.

Let me draw your attention to one or two other facts which I have noticed in this investigation, although they do not show in the 12-months chart. Better an increase of 12 per cent. at present prices than an increase of 200 per cent. at a reduction of 10 per cent. in prices. Better a 74 per cent. increase at present prices than 200 per cent. increase at a reduction of only 5 per cent.

In other words, if we are getting a fair price for our work (and there is but little printing being produced to-day at excessive profits), it pays far better to work hard at the selling end to secure a small increase of profitable work, than to work equally hard at the producing end, turning out large orders of underpaid work.

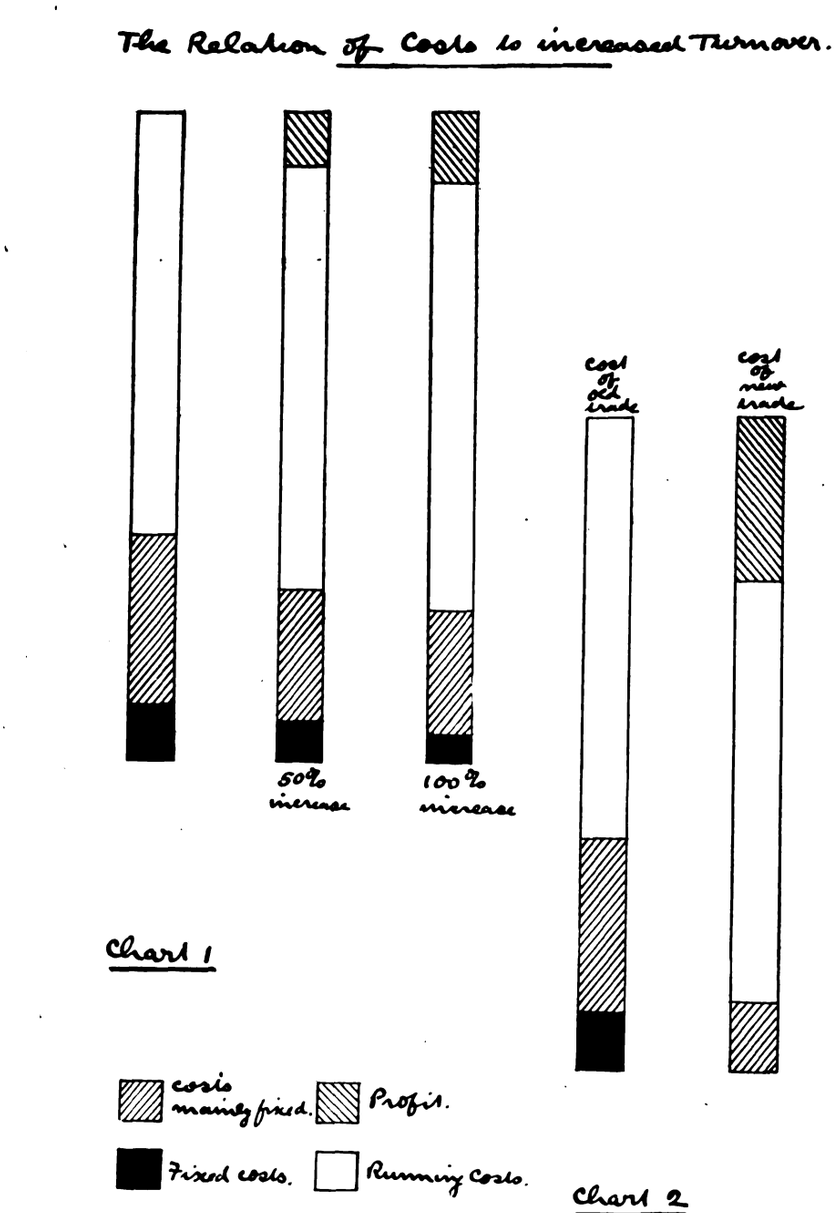

Chart 1

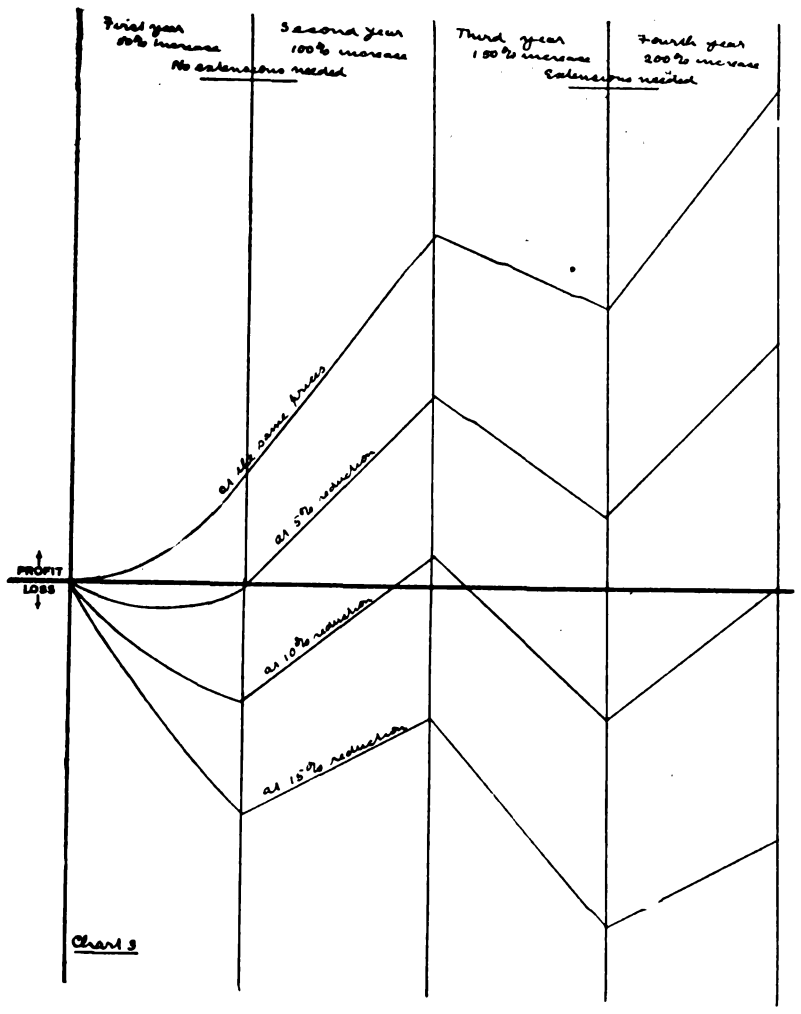
Chart 2

Digitized by Google

But, you may say, unprofitable estimates are not the same as a general lowering of charges. They are not—but you don't get away with that—they have the same effect.



Will you look at my "Simple Arithmetic" page, for it brings out in clear form the effect of inaccurate estimates on the prosperity of the trade, it shows how one-third of unprofitable work may cause two-thirds loss of profit.

Another point I should like to note in passing. Have you thought of the waste of time in doing unprofitable work? The master printer of the top scales is usefully employed all his time. The master printer of the bottom scales is wasting two-thirds of his time. One-third is wasted in supervising unprofitable work, and the other third is wasted in supervising profitable work to wipe out the loss on the unprofitable.

We play tricks in our mind with losses on turnover, trying to persuade ourselves it is all right really. Let us beware, however, of this chipping away of profits, small though they look in comparison with turnover. Do not let us take the attitude of the man who, when told no more workers were wanted, pleaded that the little bit of work that he would do would make no difference!

Profit on turnover may seem to make little difference as the work comes in, but it touches us and touches our wives very closely when it is expressed, as it inevitably is expressed, in our own income for the year. It is indeed only the "brass we addle," as we say in Yorkshire, which we can spend. We printers are too keen on growing in size, and too careless of the fact that the smaller business, working within itself so as to be well occupied with profitable work, is a better business to own than a larger one, so often short of work that it has far too frequently to take orders at non-paying rates. Such a business has to be worked in the apple-woman's philosophy, but in nine cases out of ten the printer would be far richer and far less harassed out of the printing business altogether.

Profit from increased Turnover.
At various rates of charging.

I am convinced that the first step towards better estimating is to explode the idea that an order taken at a loss is somehow of benefit. To root out this heresy from the mind of every master printer would stamp out three dangerous forms of cutting—dangerous, because it is possible for the master printer to pretend to himself that he is really not cutting. I refer to (1) the deliberate faulty estimate, (2) the suspected-but-winked-at faulty estimate, and (3) the more numerous hope-it's-right-but-lose-on-most-estimates—wouldn't-get-'em-if-we-didn't faulty estimate.

These are faults caused really by wrong business policy, by the master printer not being prepared to take the stand that his estimates shall be correct. The improvement here can only come about by proof of the folly of such estimating, such as I have given, and by an extension of the tone and spirit of the trade to make such estimating bad form—very bad form.

Leaving, then, the improvement of faults in estimating caused by policy, or lack of policy, let us consider those caused by real error. The tests of the Home Counties and other alliances have shown there is much room for improvement here, too.

What are the causes of these great variations? Shall we blame those who make up our estimates for us? Probably there is room for improvement, but when a man complains of the wooden-headed duffers he has as workers, it's just as well for him first to make quite sure that the biggest wooden-headed duffer is not the boss.

Blame the man who makes up the estimates, therefore, after you have asked yourselves the question: how much are you helping your estimating clerks to make good? Let us look at what we expect them to do. It is indeed too much to expect any man's brain to know accurately all the speeds of the many varied processes of our craft, how much these speeds vary with different classes of work and what difference paper and other outside influences will make to alter matters. At the same time, before he can put in an accurate estimate the estimator must know accurately every one of these times he has to put down—not the time they ought to take in his mind, but the time they actually do take. How can he do this? I do not see any other way to secure accuracy in this than by estimating from records of the actual times which have been taken in the works on similar jobs.

Two years ago I said that the recording of actual times could best be done centrally, and I still consider this the quickest method of starting the work. When we consider the loss to the trade through faulty estimating, it would be money exceedingly well spent, which would bring in a highly profitable return on the investment. This has been done in America, something has been done in this way for this country, such as my own "Estimator." By the by, a new edition, revised up to date, is in the press and will very shortly be posted free to every member of the Federation. Such lists have great value for checking purposes and also for those who, for lack of time or the person to do it, are unable to have the details of their own business taken out, and they are of special value to the smaller printer.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. **A boon to all users of Gold Leaf, Foils, &c.**

GOLD LEAF
In all shades & sizes.

RIBBON GOLD LEAF
from ¼in to 3½in. wide,
WHITE TRANSFER
BLOCKING FOIL
in two qualities.
"FEST" specially prepared for fine work.

METAL LEAF,
ALUMINIUM LEAF
in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/-, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

BRONZE POWDERS
60 different shades & qualities in stock.

BLOCKING POWDERS.

EGG ALBUMEN
in Flake and Powder.

GLUE (Best Scotch)
and other brands in stock.

CELLULOID GOLD.

SILVER LEAF.
&c., &c.

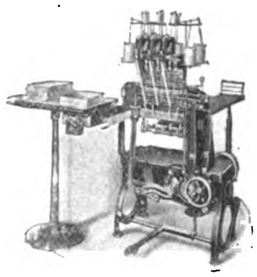
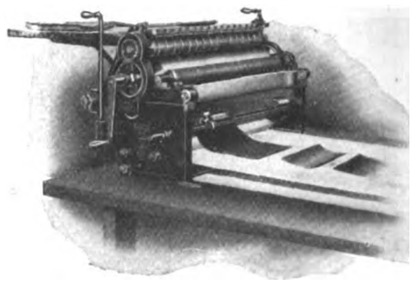
SMYTH - H

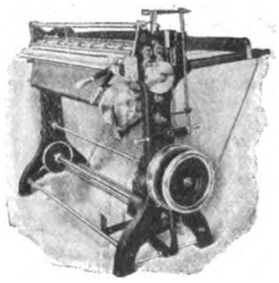


Dealers in Special Labour-Saving Machines fo

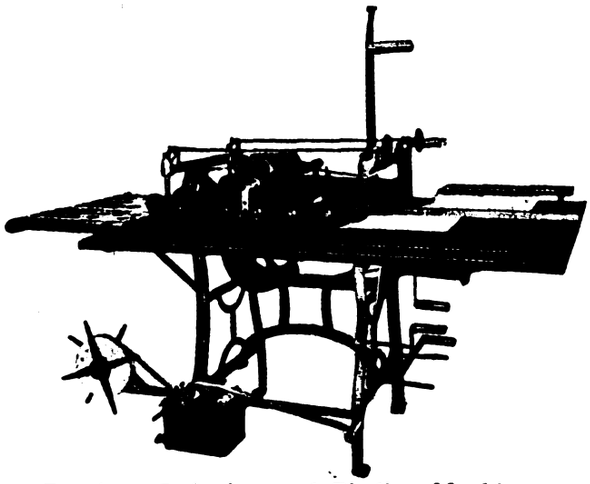
Smyth No. 4 Book Sewer.
For Sewing Stationery and Letterpress Books.
Most general all-round Sewing Machine on the World's Market.



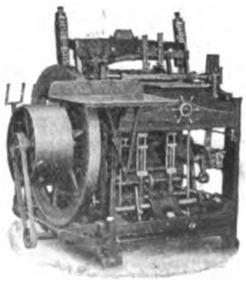
Smyth No. 8 Book Sewing Machine.
For Sewing Letterpress Books, etc.
Small and Large Size.



Smyth Imp. No. 3 Sewer.
For Sewing Letterpress Books, etc
Only Rotary Sewer on the World's
Market.



Over 4,000 Smyth Book Sewing Machines Sold.

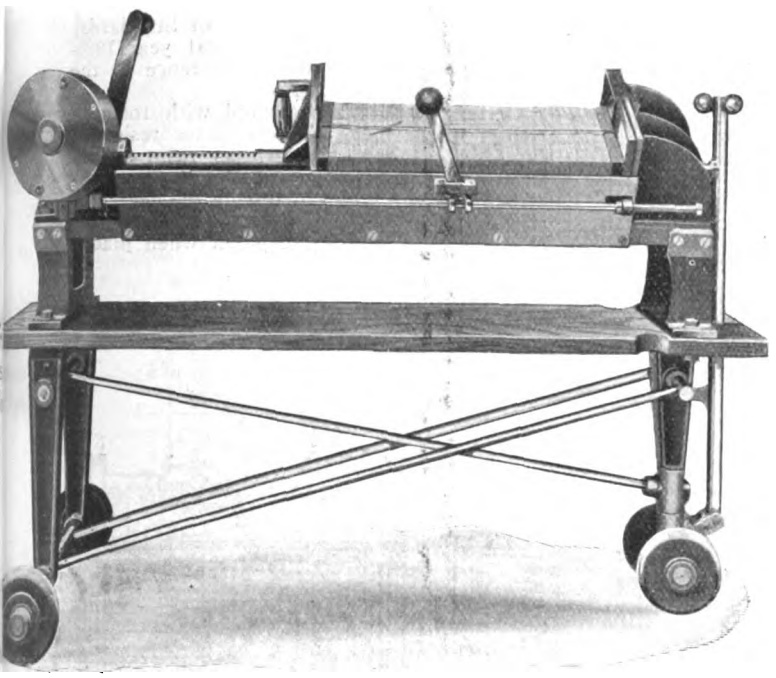


Smyth Sheet Gluing Machine.
For Pasting and Gluing Papers and Cloth
delivery automatically wet side uppermost
on to travelling band.

Smyth Cloth Cutting Machine.
For Cutting Cloth Rolls into rectangular covers, delivery flat.
Equipped with rewinding device.

Brackett Stripping and Binding Machine.
Applies a strip of paper or cloth to the backs of note books, cheque books, tablets, etc. Joins two boards together by cloth or paper strips; places cloth on paper sidings or cases, etc.; reinforces end sections, etc.

Crawley Power Book Rounding and Backing Machine.
For rounding and backing round and flat-backed books.



1-3, Baldwin's Place, Gray

Telephone: HOLBORN 2215.

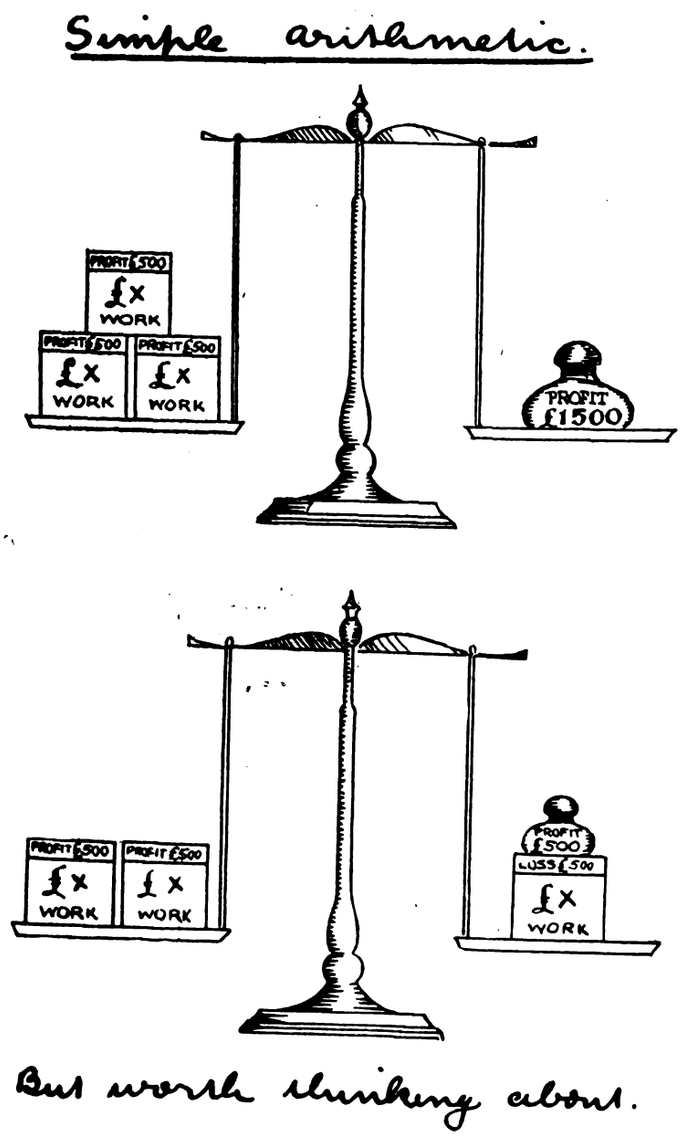
They are only general averages, however; nothing can really equal the record of our own times, for these reflect the style and quality of printing we ourselves supply. The Costing System gives us simple means of obtaining these records; in any works where it is in operation the facts are there ready to hand, they only require recording for future use.

I would suggest that the best way to do this is a card index, on which to record the actual times for different operations. In this way a valuable estimating record of operational prices would be built up, based on the actual times taken. As these records grew in size the work of estimating would more and more be done by any clerk accurate at such routine work as copying the price from the record card on to the estimating sheet. The experienced estimator would thus only have to check over the greater part of the estimate, adding himself those unusual items for which there were no records.



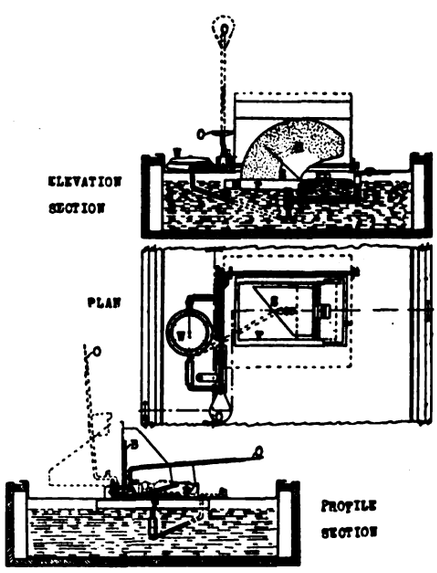
A point we want to remember is that a printer's estimate is a complicated thing, just as a house is; yet houses which differ widely in appearance may have the same bricks, mortar and tiles. In the same way many estimates widely different in character have some times the same. It will thus be seen how in the course of only a year or two a considerable part of the time of the experienced estimator would be saved, so that the cost of making the records would be amply repaid, and, what is more important, these freak estimates, about which we complain to-day, would disappear.

Along with this it will be found that certain estimates will recur. If, in a separate part of the card index, priced out estimates were recorded under suitable heads, a price list would be gradually accumulated which, after it has been tested and found to be sound, could be used for suitable enquiries.

To turn from the equipment of the department to the mental equipment of the estimating clerk, we want to secure someone who is quick and accurate at figures; but mere mathematics are not enough. There wants to be a grasp of problems, for the estimating clerk will have many problems for his solution. Added to this we must give him technical knowledge of processes, and I think in theory the best estimating clerk would be one who had served his apprenticeship in the composing department, because he would have a grasp of the most difficult part of estimating—that of composing; for the many and varied combinations which make up composing are those which it is least possible to record for future reference. Added to this we want someone who is tactful, and finds it easy to get on with other people; for an estimating clerk wants to be very much in touch with workers and processes, so as to be able to chat over and understand why a certain piece of work takes longer than another.

Both tact and firmness are also necessary to enable the estimating clerk to keep in touch with the selling end. Most travellers can secure orders from the lowest estimate, and, especially when on commission, the natural human in the traveller will lead him to press the estimator to deal out such easy estimates. Yet the estimator must resist such pressure, whilst losing no opportunity of securing work by making the most use of the equipment of the firm. By this I mean that an enquiry will every now and then come in for which the firm is not specially well placed. An estimator who can suggest an alteration in the specification which will enable his firm to compete on favourable terms is of great value both to the sales manager and the firm.

I find the Cost Congress is one of the kindest and most sympathetic audiences it is possible to address. If I have interested you, as I trust I have, then it is not your thanks now, but it is your attitude when you go back to work, which is the real test of the usefulness of what I have said. Will you remember, not my words, but the great importance of improving estimating. If everyone here would start to do their bit towards this, each in his own way, then the Cost Congress of 1925 would indeed have marked a step forward towards "Better Estimating."



Sizing Quality of Paper.

Description of a New Apparatus.

In the report of the Bureau of Standards, Washington, covering the fiscal year 1923-24, there is an important reference to the sizing quality of paper.

Certain papers are treated with rosin to render them more or less water resistant, this process being known as rosin sizing. A previous publication of the Bureau described a new method of testing the degree of sizing, this method depending upon the characteristic curling of paper when placed on the surface of water. The work on this problem during the past year has been mainly in the direction of developing an instrument for applying the test. An instrument has been completed of which the outstanding features are reproducibility of result, ease and rapidity of testing, and elimination very largely of the personal equation. The apparatus is illustrated by the section shown in the accompanying sketch.

The entire mechanism is controlled by an operating lever, O, shown in two positions. When this lever is in the upper position the float, F, is lifted clear of the water in the reservoir. A test specimen, S, is secured to the float by a spring clip. On bringing the control lever forward to its lowest position the specially designed float is lowered on to the water and a portion of the test specimen is wetted, as a result of which the paper curls. Simultaneously the stop watch, W, is automatically started. The unwetted portion of the specimen serves as a pointer and moves across the field of vision against the reference background, B. When the test specimen has progressively curled as far as it will in one direction and at the instant it begins to uncurl, the operating lever is depressed and the stop watch thereby stopped. The time interval thus obtained is that required for water to penetrate half through the sheet and serves as a comparative value of degree of sizing. On lifting the operating lever to its upper position again the stop watch is set to zero and the float is lifted clear of the water, carrying the test specimen with it. The specimen is replaced by a fresh one and all is in readiness for another test.

IMPORTS of paper and paper articles into Lithuania in 1924 were of the value of 4,373 thousand lits.

Trade Notes.

Partnership has been dissolved between H. C. W. Williams and W E. Poole, stationers, 59, Davies-street, London, W.1, under the style of Poole and Williams.

An agent established at Amsterdam is desirous of obtaining the representation in the Netherlands of British manufacturers of stationery (note pads, loose leaf ledgers, etc). D.O.T. Reference No. 645.

The old-established firm of Geo. Constable and Co., Boksburg, South Africa, has been reconstructed and formed into a new company under the style of Geo. Constable and Co., Ltd.

Members of the North London Master Printers' Association, on Tuesday, paid a visit to the Eynsford Paper Mill at the invitation of Spicers, Ltd., and were afterwards entertained to tea. The party went down by charabanc and returned by Wrotham Hill.

The National Association of Wholesale Stationers and Paper Merchants had a further conference with the Federation of Master Printers this week regarding the subject of standardisation of paper, and recommendations were agreed upon which will be submitted to both bodies at their meetings to be held at an early date.

A successful trip to Wembley was organised by Mr. C. W. Howitt, of the Guernsey Press, almost 300 availing themselves of it to visit London.

Messrs. O. J. Bradbury and Son, Ltd., of Nottingham, held their annual outing on Saturday, when 34 of the employees visited Weston-on-Trent by motor. A first rate repast was provided, and afterwards walks to Kings Mills and other places of interest in the locality were indulged in, the party returning at 8 p.m., thus completing a most enjoyable day.

The annual outing of the *Star* Circulation Department took place on Sunday to Margate, where a long day of sunshine and sea breezes was enjoyed. Dinner was served at Dreamland, under the chairmanship of Mr. C. H. Belson (circulation manager).

The staffs of *The Times* Publishing Co. and of *The Times* Book Club were entertained on Saturday by Major Astor, M.P., and Lady Violet Astor at their home, Hever Castle, Kent.

The annual dinner of the Federation of Newsagents, Stationers, and Booksellers, whose conference is taking place at Blackpool, was held on Tuesday evening. Mr. G. E. Smith, of Bradford, the new president, presided, and the 500 guests represented every section of the newspaper industry. Sir William Berry, Bt., was the principal guest, and among others present were the Mayors of Blackpool and St. Annes.

For having published a letter on a case which was *sub-judice*, Mr. R. Norman Allen, sub-editor of the *Guernsey Star*, was fined £10 by the Full Court of that island.

The question of reviving apprenticeships was discussed at the meeting last week of the Worcester Trades Council. Mr. T. G. Booth said he believed the printing trade was the only trade in which the system of apprenticeship now applied, with the possible exception of an occasional one in the building trade. There were 34 apprentices to printing in Worcester at present. His complaint was that boys were kept on one job for too long a time, and did not get an all-round knowledge of the trade. A case was quoted of an employee doing nothing else but print "funeral cards."

Advertising Convention at Harrogate.—The Committee of the Advertising Convention to be held at Harrogate next month, have received the following subscriptions in response to an appeal for a guarantee fund of £5,000 to meet the expenses of the gathering:—Allied Newspapers, £500; the *Yorkshire Post*, the *Yorkshire Observer*, the *Yorkshire Evening News*, the *Daily Mail*, and the *Daily Chronicle*, £250 each; the *Liverpool Daily Post* and Mr. Stuart Hirst, £100 each; the Amalgamated Press, the United Billposters' Association and Messrs. Goodall, Backhouse and Co., 50 guineas; the *Morning Post*, the *Daily Express*, the *Wolverhampton Express and Star*, *Daily Telegraph*, Messrs. Iliffe and Sons, and the Cunard Steamship Co., £50 each; and *Huddersfield Examiner*, £20.

We regret to report the death of Mr. H. W. Tomsett, an instructor in the letterpress machine department at the London School of Printing. Mr. Tomsett took up his duties at the School at the beginning of the present year and after three month's service, underwent an operation. Although only a short time on the staff of the School, he gave promise of having a successful career as an instructor. For a number of years Mr. Tomsett was engaged in the machine department of Messrs. Eyre and Spottiswoode.

The death has occurred at East Boldon, of Mr. George Herring, who for 34 years was editor of the *Sunderland Daily Echo*.

The late Mr. Henry Armitage, Thorner, Yorks, printer and lithographer, left £28,614, and the late Mr. Charles James Wildy, Lincoln's Inn, W.C., and Crouch-end, law bookseller, £11,540.

Mr. Henry Russell, of Stockton-on-Tees, printer and stationer, left £6,575 (net personalty £4,742).

Rev. Richard Cole (77), of Whitehead, County Antrim, Ireland, for many years the Methodist correspondent of the *Irish Times*, and from 1894 to 1924 editor of the *Christian Advocate* left (personal property in Northern Ireland and Great Britain), £1,532.

The Council of the Institute of Journalists, at its quarterly meeting on Saturday adopted a resolution protesting against the practice of certain Ministers of the Crown writing for the newspaper Press for pay.

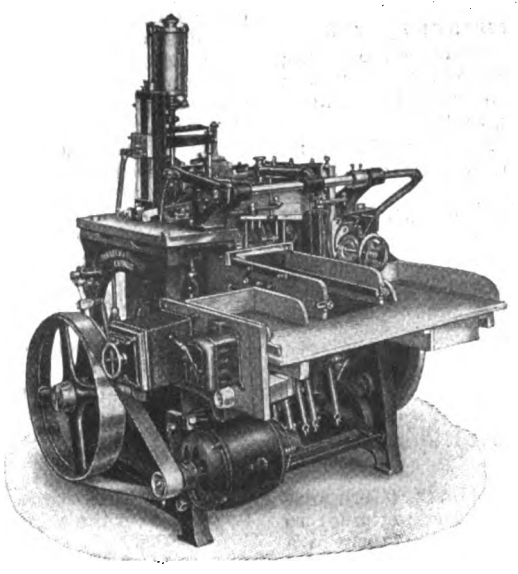
The Craft Lectures arranged by the Stationers' Company and Printing Industry Technical Board, Session 1924-5, have just been published in a neat quarto volume printed by students of the London School of Printing. It has a foreword by Mr. Richard Bentley, Master of the Stationers' Company, whose photograph is reproduced as a frontispiece.

The American Photo-Engravers' Association holds its 29th annual convention at the Hotel Commodore, New York City, July 16th to 18th.

The British Museum has just acquired the second earliest piece of known Chinese printing. This was discovered in the foundation of a building erected in China in A.D. 975, which fell down last year.

Trade Union Matters.

Typographical Association Report.—The half-yearly report of the Typographical Association, which has just been issued, shows an increase in the membership of 354 on the half-year, fully employed members showing an improvement of nearly 300, and apprentice members being 108 more than in the previous report. Contributions from members for the six months are higher by £646, and there is a small increase in entrance fees. On the expenditure side, out-of-work payments on Association account show a decrease of £1,098. In the State unemployment insurance there has been an increase in disbursements of £1,859, due to the increase in the amount of weekly benefit. Payments under the superannuation scheme show an increase of £617, the number of superannuitants being 45 higher. In funeral payments there is a decrease of £619. During the half-year 130 members died at an average age of 57·9 years.



Typographical Association Committees.—Messrs. W. H. Evans, H. J. Harvey, G. Holmes, J. Mellor, W. Wesson, J. D. French (president), and J. Skinner (secretary) have been elected members of the Rules Sub-Committee for the ensuing 12 months. Messrs. French, Skinner, J. E. Baines and G. Holmes will be the Machine Investigation Sub-Committee; and Messrs. French, Skinner, H. T. Whitley, L. P. Bristow, J. Mellor, C. Pavis and E. G. Yates the Monotype Rules Sub-Committee. Messrs. French, Skinner, W. Bottomley, H. T. Whitley, and E. G. Yates will represent the Association on the Joint Industrial Council.

Newsmen and the T.A.—At the delegate meeting of the Typographical Association held at Lowestoft last week a resolution from the Manchester branch proposing the formation of a separate section for newspaper workers to deal with all proposals exclusively affecting their interests was defeated.

Mr. Frank Henry Dyke, of Frome, Somerset, printer, left £9,945 (net personalty £6,199).

The Printing Exhibition.

Awards in the Printing Section.

As regards specimens of printers' work at the recent International Printing Exhibition, London, the judges report that the display of printing in the section open to adjudication for award was better than it had ever been. But this part of the Exhibition could be greatly improved if more printers could see their way to send in specimens of their work. There was a strong and representative panel of judges, and one would imagine that any printer would be proud to receive a recognition of the merit of his work. The fact remains that comparatively few houses are prepared to show their work under these conditions. Such work as was submitted was good. There was excellent material in every department.

The awards are as follows:—

GOLD MEDALS.

Messrs. Langley and Sons, Ltd., London—for letterpress posters.

Messrs. Sanders, Phillips and Co., Ltd., London—for letterpress, commercial and decorative typography.

Mr. George W. Jones, Sign of the Dolphin, London—for colour printing.

Messrs. Brooks (Vincent), Day and Son, Ltd., London—for picture posters.

Messrs. Fosh and Cross, London—for offset printing.

Messrs. Whittingham (Chas.) and Griggs, Ltd., London—for lithography and ofiset.

Messrs. G. and G. Ponton, Glasgow—for gravure.

The London School of Printing.

The L.C.C. School of Photo-Engraving.

SILVER MEDALS.

Messrs. Morton, Burt and Sons, London—for commercial and decorative typography.

The Westminster Press, London—for commercial and decorative printing.

Mr. Harold A. E. Pearce, Harrow—for decorative printing.

Messrs. Wass, Pritchard and Co., Ltd., London—for litho offset.

Messrs. David Allen and Sons, Ltd.—for litho offset.

Messrs. G. W. Bacon and Co., Ltd., London—for map printing.

Messrs. Geo. Philip and Son, Ltd.—for map printing.

A. Chris. Fowler, London—for colour printing.

The *Ilford Recorder* Printing Co.—for colour printing.

Messrs. Macaire, Mould and Co., London—for colour printing.

Messrs. Thacker, Spink and Co., Calcutta (Overseas Section)—for general printing.

The Commercial Press, Ltd., Shanghai, China (Overseas Section)—for general printing.

The *Times of India*, Calcutta (Overseas Section)—for colour block printing.

THE MAJOR ASTOR PRIZES OF £5 EACH.

(Open to members of recognised Jobbing Guilds for lay-out of letterpress note-heading and the front page of an octavo circular—matter supplied.)

Mr. F. Harvey, L.S.C. Jobbing Guild, 12, Cadoxton-avenue, Stamford Hill, N.15—for letter-heading.

Mr. A. G. White, L.S.C. Guild, 33, Chapter-road, Kennington, S.E.17.

SILVER MEDAL (SPECIAL AWARD).

Mr. Walter Talk, compositor at Wald, Zachrisson's Printing House, Kopmansgat, 32-38, Gothenburg, Sweden.

From Tree to Newspaper.

A papermaker of the Hartz (Germany) recently made an interesting experiment to demonstrate the time required to transform a tree into a newspaper. Three trees were felled at 7.35 a.m., freed from bark and carried to the pulp mill. At 9.39 a.m. the first roll of paper was ready (2 hrs. 4 mins. to produce paper). Carried by motor lorry to a printing works, 2½ miles away, it was at once put into the press and at 11 a.m., viz., 3 hrs. 25 mins., after felling the tree, the newspaper was on sale.

IMPORTS of German printing machinery and presses into New South Wales during February represented a value of £1,472.

Printers' Managers and Overseers

(PARENT) ASSOCIATION.

Impressions of the Printing Exhibition.

At the June meeting of this Association, held at the "Old Bell," Holborn, on Tuesday of last week, the principal item on the agenda was a discussion of the Printing Exhibition, several members giving personal impressions. The president, Mr. R. H. Berry, presided over a gathering smaller than usual in numbers, owing doubtless to the very warm weather prevailing.

Two candidates for membership were elected into the Association, viz.: Mr. W. T. Blenkarn (Sun Engraving Co., Ltd., Watford. Overseer, Letterpress Dept.); Mr. P. Gorvett (Linotype and Machinery, Ltd., Kingsway, W.C. Overseer, Composing Dept.). Both were present and received a personal welcome from the president and the meeting.

Delegates' Report.

The next item on the agenda was the reception of the report of the delegates attending the United Gathering held in London in connection with the Printing Exhibition.

Mr. Berry intimated that a full report of the delegates' proceedings had already been circulated to members, but he called upon the appointed delegates to address the meeting.

Mr. A. H. Wilson said that the business of the delegate meeting had all been transacted most satisfactorily, there being very little real contention throughout the proceedings. Whilst there was a lot of discussion upon certain items, the London delegates were surprised to find how very close to their own way of thinking were many of the provincial delegates. There was, in fact, little occasion for London to voice its opinion, and no occasion at all to resort to the card vote. Mr. Wilson added that their president, Mr. Berry, had carried through the duties of chairman in a most efficient manner, his capabilities in this respect conducing to the smooth transaction of the business before the meeting. He thought their best thanks were due to their president for his admirable services as chairman on that occasion.

Mr. A. E. Jarvis concurred in the remarks made by Mr. Wilson. He laughingly suggested that as the business had gone through so smoothly, it was superfluous that London should have been represented at all. There had never been a more satisfactory delegate meeting, so far as London was concerned. Mr. Jarvis also bore testimony to the able way in which the chairman had managed the meeting.

It was proposed and seconded that the delegates' report be adopted, and this was agreed *nem con.*

Under the heading of "General Business" the president referred to the recently concluded law suit, in which a P. M. and O. A. member had been awarded £800 damages in an action for wrongful dismissal. He told of the long and earnest efforts made by the Council of the Association in connection with this case, and he thought the Association had cause for satisfaction in the fact that their member had gained a very handsome verdict. He added that the Council had supported this member, not at all from any personal reason, but merely on account of his being a member and on the merits of the case. (Applause.)

Mr. H. J. Forder, the member in question, was present, and was accorded a very cordial reception when he took the opportunity to thank the Association for the support they had given him.

The general secretary bore testimony to the keen interest shown in the case by the president, the vice-president and other officials, and on the proposition of Mr. Frazer a hearty vote of thanks was passed to them, it being agreed that the record of appreciation should be placed on the minutes.

The Printing Exhibition.

In view of the heat of the evening and the rather unfavourable conditions existing, Mr. Jarvis suggested that the meeting might be curtailed, and the discussion of the Printing Exhibition adjourned, but this was opposed by the chairman, who pointed out that there would not be another suitable opportunity.

Mr. Berry proceeded to refer to his own experience of the Exhibition, remarking that between 400 and 500 of their members had visited the P.M. and O.A. stand, for the erection of which Mr. Bridges had kindly granted them facilities. Inquiries about membership reached them in great variety, including one by a gentleman as far away as Zanzibar. He thought their presence at the Agricultural Hall had been a very good thing for the Association.

Mr. A. H. Wilson said he wished to take the earliest opportunity of asking the members to record a very hearty vote of thanks to those gentlemen who had spent a good deal of time in the Association's interest at the Exhibition; particularly he wished to express his personal appreciation of the great work done by the stewards on "Our Day."

This was duly seconded, and carried very cordially.

The meeting then proceeded to engage in informal discussion of the Exhibition, and a number of interesting comments were forthcoming.

One speaker suggested that it would be a great gain to the Exhibition if more actual printing were being done, instead of having white paper going through the machines. Another, who spoke particularly from the compositor's point of view, suggested that there was very little new or instructive for the compositor, although in the machine department, particularly in the offset section, there were notable developments.

Reference to the very fine lithographic machinery shown elicited an inquiry as to where suitable men would be found to control the apparatus in this growing section of the trade, much of the machinery being complicated, and requiring highly skilled labour. With regard to the running of white sheets in the machines, a further speaker pointed out that the doing of actual printing would either entail great waste or would introduce competition in the execution of commercial work, whilst the collection of a miscellaneous crowd was not what the machinery salesmen desired. Comment was made upon the predominence of lithographic machinery on the stands, and the fact that the Exhibition showed that offset was rapidly going ahead. It was evident that whilst some members thought there was little advance this year upon what was shown at the previous Exhibition, others asserted that great advances were noticeable, this being accounted for, no doubt, by different interests and different points of view.

Mr. S. A. Dawson maintained that it was the greatest Printing Exhibition ever held in London, and he suggested that British printing engineers now showed that they were recovering from the set-back caused by the war, which affected them very much more than their colleagues in America. Mr. White remarked upon the wonderful progress accomplished on the lithographic side of offset printing, and referred with special admiration to the exhibit of Pictorial Machinery, Ltd.

Mr. J. C. Pugh laid emphasis on the big improvement shown in that most useful machine, the Wharfedale, and Mr. E. H. Berryman, in the course of his remarks, made the practical suggestion that in regard to automatic feeders a notable feature was the large amount of space that some of them occupied. It occurred to him that they would be much more practicable if they could be made more compact.

The Secretary pointed out what a splendid opportunity the Exhibition provided for educating the non-practical employer by taking him around and letting him see for himself the apparatus available to supply wants in his own factory. Mr. Whittle also bore testimony to the great advantage that would accrue to the Association from their having a stand at the Exhibition, and he suggested that at the next Printing Exhibition something more ambitious should be arranged in this direction. The President added a few words upon the big advances made by the Linotype machine, and this concluded the discussion.

THERE has been such a demand for the little book written by Mr. H. A. Maddox, entitled "What a Printer and Stationer Ought to Know About Paper," that the publishers, Messrs. J. Whittaker and Sons, Ltd., Warwick-lane, London, have brought out a third edition. The purpose of the work is to put before those who handle paper the information that is essential to an efficient understanding of the various classes in popular use. In this little volume, therefore, is furnished information concerning the pecularities, points of distinction and features on which to base identification and judgment of the different classes of paper which come the way of the stationer, the printer or the paper user. As an addition to the 15 chapters dealing with these points there is a section devoted to paper sizes, tables, and other data which will be found of permanent value.

Printers' Managers and Overseers' ASSOCIATION.

Bowling Match.

The Church Hotel, Northenden, was the venue on Saturday last for the match President *v.* Vice-President, the scores being as follow:—

PRESIDENT.		VICE-PRESIDENT.	
Scouler, F., president	11	Hellewell, A., vice-president	15
Piggott, A.	15	Thorpe, T.	11
Winstanley, J.	15	Goat, C.	4
McVay, Edward	12	Bartlett, A.	15
Balls, E. C.	12	Garrett, E	15
Jones, A.	15	Worthington, Jas.	8
Smith, W.	15	Bardsley, W.	4
Mayo, Jas. E.	1	Ball, J.	15
Hall, H.	15	Scouler, F., Junr.	5
Nuttall, J. H.	15	Hall, H., Junr.	8
Philbin, J. W.	14	Wood, A. R.	15
		Rignall, Thos. (Liverpool)	15
Entwistle, J.	0	Taylor, Geo.	15
Mason, G.	8	Mason, C. R.	15
Gyngell, A. J.	3	Hughes, F. J. (secretary)	15
Hughes, R. W.	2		
	153		175

The team skipped by Vice-President Hellewell having won by 22 shots an adjournment was made for a substantial tea served by Host Evans. Votes of thanks were moved by the president and vice-president to Mr. J. Evans for his splendid repast; by Messrs. E. Garrett and C. R. Mason to Mr. Edward McVay for his excellent arrangements; and afterwards Messrs. J. H. Nuttall and Thos. Rignall (Liverpool), two past-presidents, added their meed of praise.

The special business following was "Seeley Cup and Ladies' Day." It was agreed that as there was no definite news of new entrants, Manchester should meet Yorkshire at Sheepridge, Huddersfield, on July 18th (third Saturday) for the first round in the Seeley Cup, and that ladies and friends be invited to witness the event.

WEE MAC.

Personal.

LORD RIDDELL, the proprietor of the *News of the World*, has been entertained to luncheon by the heads of departments and presented with a gold snuff-box on the occasion of his 60th birthday.

A PRESENTATION of two armchairs and an aneroid barometer was made on Monday by the directors and staff of Messrs. George Philip and Son, Ltd., to Mr. T. S. Routledge on the occasion of his completion of 50 years' service with the firm as a map engraver.

MR. ROUTLEDGE commenced his apprenticeship at Liverpool on June 15th, 1875, under the late Mr. George Philip, the founder of the firm. Mr. Routledge has engraved the original plates of many of the firm's best known publications. His work, therefore, has been circulated in every part of the world.

MR. E. DOWLAND, who for thirty years has been the overseer of the machine-room of Messrs. Holbrook and Son, proprietors of the *Portsmouth Times*, has been presented by the directors with an eight-day clock on the occasion of his marriage.

MR. H. T. WHITLEY, of Belfast, has been elected vice-president of the Typographical Association.

MR. WILLIAM MAXWELL has been elected chairman of the Aberdeen District of the Newspaper Press Fund.

MR. J. A. CLARK (Edward Lloyd, Ltd.) is now in Canada studying the paper industry. It may be recalled that he was awarded the Robert Blair scholarship in London, entitling him to select an industry for study and investigation. He chose the technology of the paper industry, which he is now investigating in Canada. He was to spend some time in the mills of Ontario and will also visit a number in other parts of the Dominion.

TO COMMEMORATE his journalistic diamond jubilee, Mr. W. Dallas Ross, the well-known London journalist, was entertained at luncheon at the Savoy Hotel on Thursday by many of his colleagues and friends. The occasion was also taken to present him with a silver salver, on which is to be inscribed the names of all who contributed to it.

THE RIGHT HON. RONALD MCNEILL, M.P., Under-Secretary for Foreign Affairs, who was associated with Mr. Ross in the days of the old *St. James's Gazette*, presided, and amongst others present were Viscount Burnham, Lord Riddell, Sir Howard Spicer, Mr. W. Lints Smith, Mr. W. J. B. Odhams, Mr. W. H. Lock, and Mr. J. S. Elias.

MR. O. J. BRADBURY (O. J. Bradbury and Son, Ltd., jacquard card and paper manufacturers, Nottingham), leaves for New York by s.s. "Caronia" on June 27th for an extended trip to the United States and Canada, returning in September.

MR. GEORGE P. FLEMING, P.C., the well-known papermaker of Dublin, is the subject of a biographical sketch in a recent issue of *Sport*, a lively sporting newspaper published in Dublin. Mr. Fleming is described as a big man in every sense of the word. "He owns the biggest picture house in the Free State, is big of stature, big at heart, and has all his life played a big part in the world of sport."

SIR HENRY BIRCHENOUGH, BT., who was chairman of the Paper Commission during the war, has been appointed president of the British South Africa Co.

MR. G. R. HALL CAINE, M.P., will be one of the representatives of the Industrial group of the House of Commons who will visit Poland shortly on the invitation of the Polish Government.

MR. PERCY G. DENSON (managing director of Edward Lloyd, Ltd.) has been invited to become the first president of the Chamber of Commerce recently formed at Sittingbourne, Kent.

Built in 2 Sizes.

Soldans' 'Baby' Lightning Press.

Proofs Formes or Tied-up Matter at Truly 'Lightning' Speed.

IMPRESSION - Clean as a whistle.
TIME REQUIRED - - Minimum.
SPACE REQUIRED - - Minimum.
PROOFS OBTAINED - Equal to Machine.

RESULT—Everybody Pleased.

Has no equal for quick and economical page proofing, and should be in every composing room.

Made with the same precision as Soldans well-known

'Lightning' Self-inking Proof Press.

Over 700 users in Great Britain and Colonies.

Sizes:—Royal, D. Crown, D. Demy, Quad Crown.

Paper Trade Statistics.

The quarterly return dealing with the figures up to March 15th, 1925, issued by the Board of Trade, gives the following interesting statistics relating to the imports and exports of paper of certain foreign countries and British Possessions:—

LITHUANIA.—Paper and paper manufactures imported into Lithuania during the twelve months ended December represented 3,986 tonnes (of the value of 4,373,000 litai), compared with 5,057 tonnes (3,.85,000 litai) in the twelve months of the preceding year. Exports of a similar class of merchandise during the whole of last year amounted to 2,263 tonnes (1,864,000 litai). Paper exports from Lithuania during 1923 are not available. [Litai = 45 74 to the £ in 1923 and 44·55 to the £ in 1924].

FINLAND.—In the twelve months ended December news-print was exported from Finland to the extent of 134,762 tonnes (of the value of 382,635,000 marks), compared with 127,417 tonnes (376,770,000 marks) in the twelve months of the preceding year and 130,083 tonnes (468,253,000 marks) in 1922. Pasteboard exports in the three respective periods were: 32,976 tonnes (66,092,000 marks), 23,466 tonnes (54,282,000 marks), 24,690 tonnes (71,428,000 marks). Packings: 27,918 tonnes (89,222,000 marks), 23,897 tonnes (84,825,000 marks), 30,618 tonnes (124,987,000 marks). Writing paper: 3,637 tonnes (17,425,000 marks), 6,021 tonnes (29,804,000 marks), 11,359 tonnes (67,800,000 marks). Tissue paper: 1,110 tonnes (15,630,000 marks), 1,123 tonnes (13,562,000 marks), 500 tonnes (9,788,000 marks).

NORWAY. — Printing paper exported amounted to 135,406 tonnes in the twelve months ended December last, as contrasted with 145,002 tonnes in the twelve months of the preceding year, and 148,416 tonnes in the 1922 twelve months. Packing paper dispatched from Norway during January to December last stood at 60,684 tonnes, compared with 66,249 tonnes in the corresponding twelve months of 1923, and 67,984 tonnes in the similar period of 1922. Printing paper exports during January amounted to 16,189 tonnes, against 10,788 tonnes and 12,379 in January of the two preceding years.

SWEDEN.—Paper "of all kinds" exported from Sweden during the twelve months ended December reached 335,296 tonnes, against 291,777 tonnes in the twelve months of the preceding year, and 263,435 tonnes during January to December, 1922. Paper "of all kinds" exported from Sweden in January reached 30,038 tonnes, against 24,610 tonnes in January last year, and 23,876 tonnes in the corresponding month of 1922.

DENMARK.—The value of paper and paper manufactures imported into Denmark in the twelve months ended December last stood at 27,662,000 kr., as against 28,612,000 kr. in the twelve months of 1923, and 25,680,000 kr. during January to December, 1922. During January imports of paper and paper manufactures were valued at 2,171,000 kr., against 2,261,000 kr. and 1,867,000 kr. in the corresponding month of the two preceding years.

GERMANY. — Given in 100 kilos., fancy, coloured, varnished, etc., paper exported from Germany during January to December amounted to 204,980,000, compared with 223,880,000 in the twelve months of 1923 and 175,522,000 in 1922. Photographic paper exports stood at 11,192 during January to December, contrasted with 11,448 in 1923, and 14,483 in the twelve months of 1922. Exports of fancy, coloured, varnished, etc., paper in the twelve months ended December reached a value of 19,049,000 gold marks, whilst the exports of photographic paper in the same period were of the value of 5,462,000 gold marks. Fancy, coloured, varnished, etc., paper exported from Germany during the first month of the year amounted to 14,811,000, against 15,871,000 in the corresponding month last year and 15,063,000 in January, 1923.

NETHERLANDS.—Printing and writing paper (including news-print) exported from the Netherlands during the twelve months ended December represented 48,017 tonnes (of the value of 11,181,000 guldens), compared with 44,922 tonnes (11,137,000 guldens) in the corresponding twelve months of 1923, and 36,308,000 tonnes (9,616,000 guldens) in the twelve months of 1922. Imports of the same class of merchandise in the three years were as follows: 38,047 tonnes (8,609,000 guldens), 1924; 36,594 tonnes (9,469,000 guldens), 1923; and 34,167 tonnes (8,241,000 guldens), 1922. Strawboard exports reached 209,095 tonnes (19,567,000 guldens) during January to December, as against 183,556 tonnes (18,216,000 guldens) in 1923, and 171,484 tonnes (15,329,000 guldens) in 1922.

BELGIUM.—Paper and cardboard imported into Belgium during January to October reached 40,228 tonnes (96,941,000 francs), against 39,277 tonnes (77,821,000 francs) in the corresponding period of the previous year. Exports for the same periods covering a similar variety of manufacture stood at 31,778 tonnes (99,074,000 francs) last year and 29,201 tonnes (74,695,000 francs) in the ten months of 1923.

FRANCE.—Given in 100 kilos., paper imported into France in the twelve months ended December amounted to 1,480,153 (235,602,000 francs), contrasted with 1,420,711 (203,654,000 francs) in the twelve months of 1923, and 1,344,293 (165,495,000 francs) in 1922. Exports of paper in the same three twelve monthly periods were: 526,942 (256,541,000 francs), 1924; 484,638 (253,935,000 francs), 1923; 357,849 (175,283,000 francs), 1922. During January paper, also in 100 kilos., imported by France represented 134,935, against 145,546 and 127,958 in January of the two preceding years.

SWITZERLAND.—Exports of printing paper, etc., during January-December last year, in 100 kilos., reached 114,510 (5,984,000 francs), as against 118,779,000 (6,626,000 francs) in 1923 and 122,146 (7,004,000 francs) in the twelve months of 1922. During January exports of a similar class of manufacture reached 14,116 (706,000 francs), compared with 8,930 (449,000 francs) in the corresponding month of 1922.

SPAIN.—Paper for cigarettes exported from Spain during January to June amounted to 13,814, as contrasted with 15,119 tonnes in the similar period of the preceding year and 11,128 tonnes in the 1922 period.

ITALY.—In 100 kilos. paper (white or dyed in the pulp) exported from Italy during the eleven months ended November represented 122,420 (of the value of 53,429,000 lire), compared with 66,825 (33,937,000 lire) in the eleven months of the preceding year, and 28,025 (30,257,000 lire) during January to November, 1922.

HUNGARY.—Paper (in 100 kilos) imported into Hungary during the twelve months ended December reached 305,761, against 288,662 in the twelve months of the preceding year, and 390,211 in 1922. Cardboard imported during January-December stood at 61,760, compared with 59,486 in 1923, and 74,079 in the twelve months of 1922. Exports of paper and paper manufactures (in 100 kilos) exported during January to December amounted to 3,300 compared with 5,339 in 1923, and 9,014 in 1922.

CZECHO-SLOVAKIA.—The exports of printing paper shipped from Czecho-Slovakia during January to December represented 10,418 tonnes, contrasted with 10,482 tonnes in the twelve months of the preceding year. The following represent the other classes of paper goods (in tonnes) leaving Czecho-Slovakia during last year, the figures in parenthesis showing the amounts in the twelve months of the previous year: Packings 9,639 (10,616); printing paper, 10,418 (10,482); cardboard, 8,962 (6,333); writings, 1,189 (2,246), cigarette paper, 561 (455).

GREECE. — Printing paper imported into Greece during January to April amounted to 1,682 tonnes (9,507,000 drachmas), contrasted with 1,314 tonnes (11,318,000 drachmas) in the corresponding period of the preceding year, and 1,638 tonnes (3,895,000 drachmas) in the 1922 period. Writing paper imported during January to April reached 405 tonnes (2,922,000 drachmas), 183 tonnes (1,688,000 drachmas) in the corresponding four months of 1923, and 150 tonnes (556,000 drachmas) in the 1922 period.

Exports of British Paper, etc.

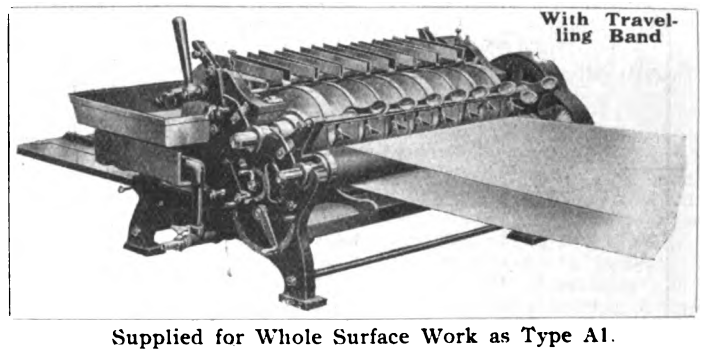
THE "ST. GEORGE" MACHINES

(TRADE MARK) (ALL BRITISH MAKE).

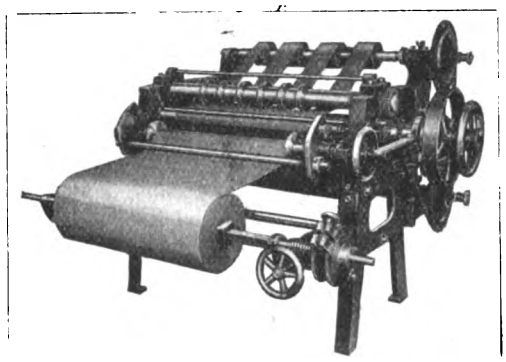
For Glueing, Gumming, Pasting, Varnishing, etc.



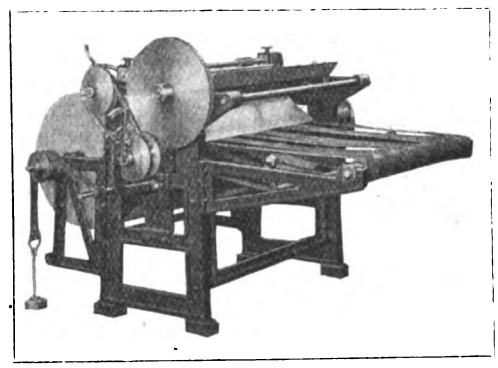
We Manufacture the Largest Range of Types & Sizes, for all Purposes, for all Trades.

Type A for WHOLE SURFACE WORK.

Supplied for strip work as Type C.



Type A4, for Strip and EDGE WORK

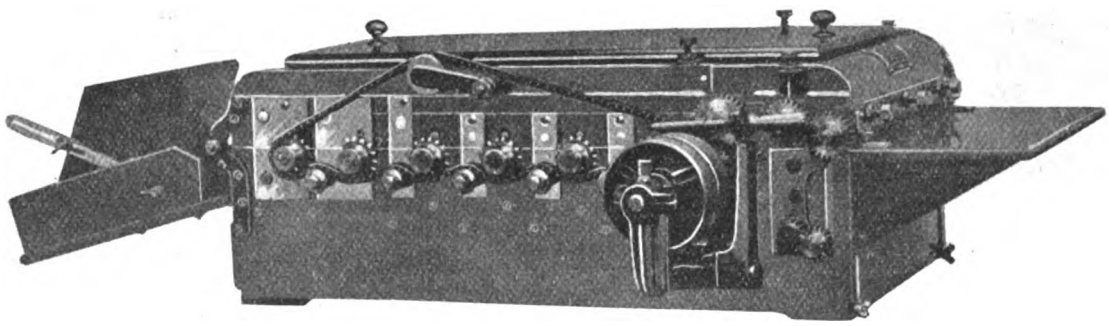


Supplied for Whole Surface Work as Type A1.

SOME USEFUL MACHINES for BOX MAKERS, PAPER MAKERS and the TEXTILE TRADE

Slitting and Rewinding Machines as Shown, also Surface Rewinding

Sheet Cutting Machines from the Reel, also as Combined Slitter and Sheet Cutter



The most Original and Adaptable Bronzer yet produced.

Made in Six Sizes: 7 ins., 15 ins., 16 ins., 24 ins., 32 ins., and 40 ins. wide; will take any length.

NEW AND IMPORTANT IMPROVEMENTS *(Patent Applied for).*

COMPACT. The illustration *proves* it. It will Bronze, Burnish & Dust most work in one operation and takes such little space and power.

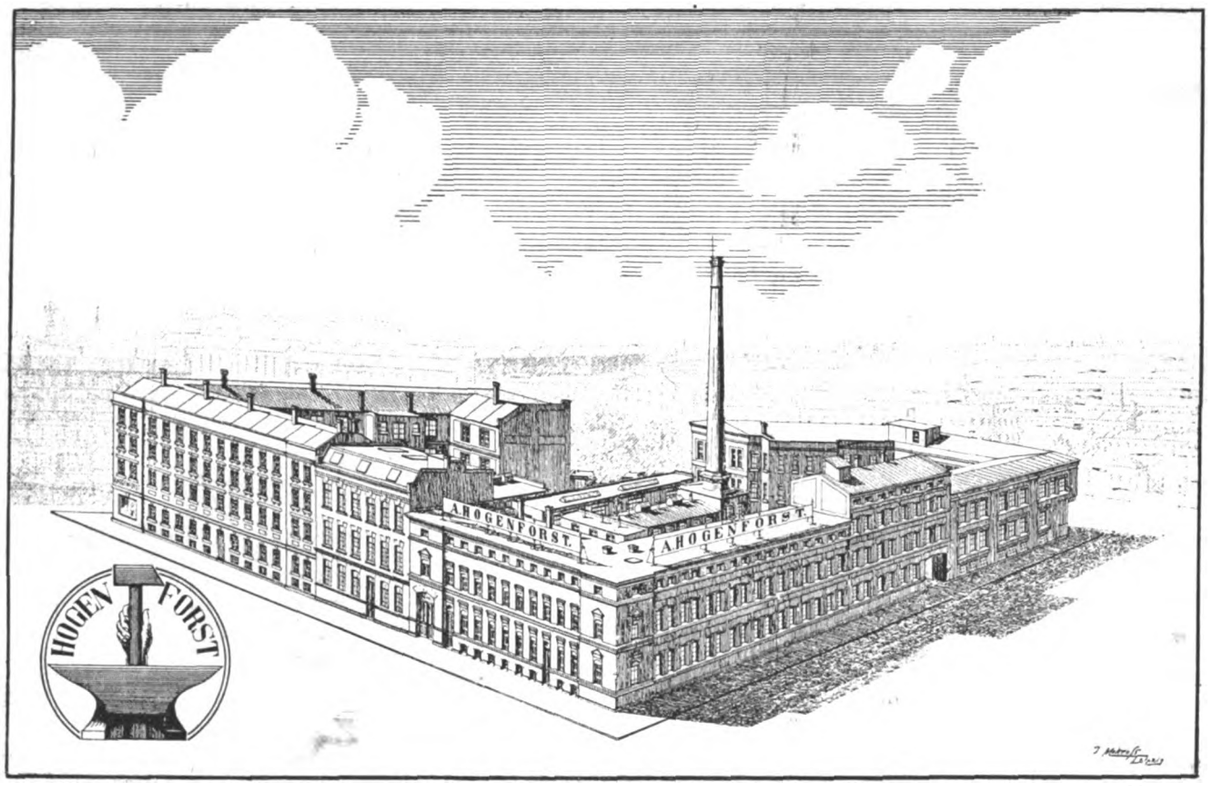
ADAPTABLE. Can be placed in the centre of a group of machines; with a girl to feed it, it will often keep all machines going. Can be moved from one department to another.

These Machines (formerly called **The Silverlock**) have been designed with just the required amount of mechanism to produce work unsurpassed by any other make. WHY pay for unnecessary machinery to do the same job? Consider the advantages offered. Saves POWER, SPACE and CAPITAL. Costs little for upkeep. Tackles any Job from Thin Paper to Thick Card.

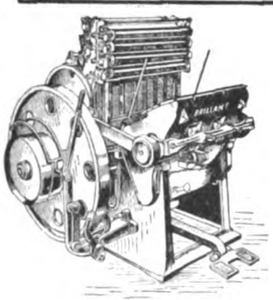
We are manufacturers in addition of a fairly wide range of machinery suitable for all the various branches of the Trade, including :—

Rotary Cutting Machines.
Rotary Cutting and Scoring Machines.
Rotary Scoring for hand or power.
Vertical Bending Machine.
Millboard Cutting 24 inches to 56 inches.
Small Card Cutters from 6 inches to 24 inches.
Bevel Card Cutter.
Tube Making Machine.
Sheet Cutting Machines.
Rule Cutting and Bending Machines.
Treadle Perforating Machines.
Relief Stamp Presses.
Nipping Presses.
Hole Punching Machines.
Round and Square Corner Cutting.
Showcard Edging Machine.
Slitting and Rewinding Machine.
All Steel Waste Paper Balers.

Practical Machines Co. (A. T. Gadsby), Ltd.,



Offices: 125, HIGH HOLBORN, W.C.1. Telephone: **Museum 8057.** Telegrams: **"Bronzium, Camber, London."**



Works: 46, CAMBERWELL GREEN, LONDON, S.E.5. **Telephone Hop 2367.**

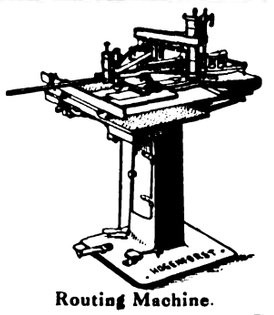
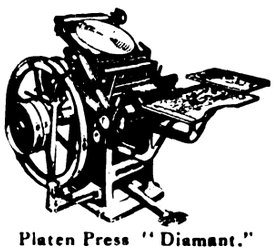
A. HOGENFORST
LEIPZIG

The oldest factory in Germany specialising in Machinery for the Printing & Allied Trades

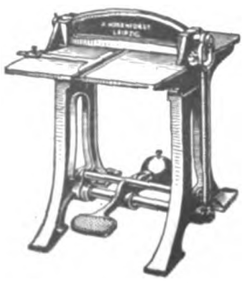




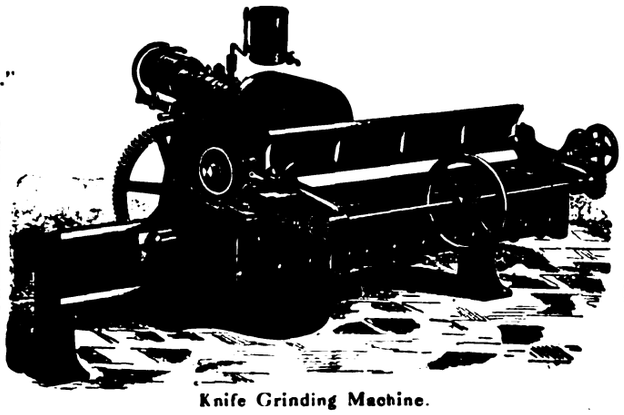
Platen Press "Brilliant"

THE "HOGENFORST" SPECIALITIES INCLUDE:

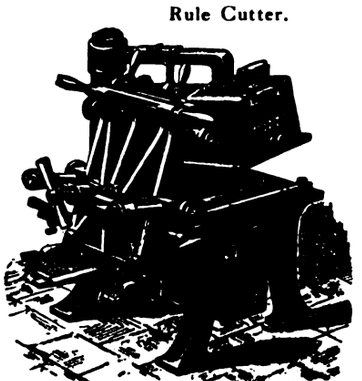
1. ***Rapid Platen Presses***—*with Cylinder Inking or Inking Disc.*
2. ***Perforating Machines***—*for General and Special Work.*
3. ***Auxiliary Machines, Apparatus and Utensils***—*for the Composing Room.*
4. ***Stereotype Plants***—*with Combined or Separate Apparatus.*
5. ***Machines for Chemitypy and Electrotyping.***
6. ***Automatic Knife Grinding Machines.***
7. ***Printers' Joinery.***



Routing Machine.



Platen Press "Diamant."



Rule Cutter.

Perforating Machine.

Knife Grinding Machine.

Combined Stereo Plant.

Tibetans Introduce Printing.

Aberdonian from Calcutta as Instructor.

The introduction of printing into Tibet is an interesting chapter in the history of that country, and instances the ever-growing utility of the printing art.

Mr. Charles G. Duncan, who is at present home in Aberdeen on leave from Calcutta, where he is manager to Messrs. Thacker, Spink and Co., the oldest printers and publishers in India, told a representative of the *Aberdeen Press and Journal*, of the marvellous developments that are taking place in Tibet. The Commander-in-Chief and Prime Minister of that country, accompanied by their retinue, went to Mr. Duncan's firm last December and announced that they wished to introduce printing on up to date methods into Tibet, and inquired whether the firm would undertake to do so.

Up till that time printing had been done by the old method of writing by hand on the paper made in Tibet on rolls, and as the bordering state of Nepal had made great progress in western methods, the Tibetans wanted to be ahead of them in that respect. With this end in view, natives were sent to England for training in professions and crafts, and two were selected, one of whom is a Lama and Master of the Mint in Tibet, to be trained as practical printers.

Plant Purchased in Calcutta.

Mr. Duncan trained the officers in the various processes of printing, such as composing and machine work. On the completion of the training, they purchased machinery and accessories, and after a 20 hours' rail journey from Calcutta to Kalimpong, they dismantled the machinery, packed it on to yaks, and proceeded by road to Lassa, where the foundations of the press were to be started. The machinery will have reached Lassa by this time, and the first undertaking will be the printing of the State currency cheques.

Mr. Duncan has been invited, on his return to India, to proceed to Tibet, where there are no Europeans, to help in the organisation of the printing under the auspices of the Indian and Tibetan Governments. He says the Tibetans proved very intelligent and adaptable, and learned the processes of printing very rapidly. The Commander-in Chief and Prime Minister and suite dressed and lived while in Calcutta like Europeans They discarded their native costume, but wore their hair long as usual, and indicated that they were going to try and convert their fellow-Tibetans to a more European way of living.

Mr. Duncan, who has thus played a prominent part in the introduction of printing into Tibet, served his apprenticeship with the late Mr. George Robb, Adelphi, and his father was also employed there as a printer. He has been eleven years in Calcutta, where his brother, Mr. C. C. Duncan, is in charge while he is at home on leave.

THE consumption of paper in Austria is estimated at 9,256 waggons, representing 13·61 kilos per head in a population of 6,800,000 inhabitants.

Indian Notes.

(From Our Own Correspondent.)

TOTAL imports of paper and pasteboard into India during the year 1924 amounted in value to Rs. 301 lakhs, as against Rs. 272 lakhs in the previous year, an increase during the year of 10 per cent. Quantitatively, the imports increased from 1,292 thousand cwts. to 1,654 thousand cwts., or by 28 per cent. The level of prices during the year was lower than in the previous year.

THE figures under the various classes were as follows:—

	1923. Cwts. (1,000)	1923. Rs. Lakhs.	1924. Cwts. (1,000)	1924. Rs. Lakhs
Printing paper	379	88	576	115
Packing paper	80	18	138	28
Writing paper & envelopes	147	58	182	56
Old newspapers in bales	283	22	504	37
Other kinds of paper	151	38	89	20
Paper manufactures	22	18	30	20
Pasteboard, millboard & cardboard	222	30	183	24

THE most important item is printing paper. Of the total imports under this heading, newsprint was responsible for 338 thousand cwts., valued at Rs. 52 lakhs, as against 140 thousand cwts, valued at Rs. 23 lakhs. The increase was more than 200 per cent. in quantity. Under other sorts, the imports were the same as in the previous year, namely 238,000 cwts., valued at Rs. 62 lakhs.

SOURCES of the imports of printing paper in 1924 were as follows, in 1,000 cwts., the figures for 1923 being given in parenthesis:—United Kingdom, 110 (107); Norway, 119 (111); Sweden, 22 (26); Germany, 200 (82); Netherlands, 45 (16); Belgium, 8 (5); Austria, 43 (20); other countries, 26 (13).

THE most noticeable increases are in the imports from Germany, Netherlands and Austria. Germany is now the largest supplier of printing paper to India, having increased her share during the year by 150 per cent. Imports from the Netherlands and Austria increased by 280 and 115 per cent. respectively. The increase in the imports from the United Kingdom is slight, but it is a steady one from 94,000 cwts. in 1922 to 107,000 cwts in 1923 and to 110,000 cwts. in 1924. There is reason to fear, however, that Germany will be able to increase her imports still further, and it may be at the cost of the United Kingdom. Imports from Sweden have been steadily declining in recent years.

THERE is reason to think that in future India will increasingly supply her requirements by her own manufactures. There are already about 10 large mills in India, producing something like 25,000 tons of paper annually But their number is very likely to increase in the immediate future. All Provincial Governments are giving special attention to the promotion of the paper and paper-pulp industry and investigations have been carried out in most of them. In Madras a scheme is ready and will be carried out by hydro-electric power. A committee has recently reported in Burma. Thus there is activity everywhere. In the meantime, the present position of the industry in India is not quite satisfactory. Hence the application to the Tariff Board for a protective tariff. Their case was not a particularly strong one, however, at least so far as printing paper was concerned. It is stated that this matter has been as good as dropped. In any case, the Indian industry will grow, though gradually.

The **American Miehle Company's Presses**

Supremacy.

THE supremacy of the American Miehle Company's Presses is practically unquestioned. It is certainly never questioned by any printer who owns one or more of them.

A preference such as this, based upon actual use of the machine, in some cases for more than thirty years, is final.

THE AMERICAN MIEHLE COMPANY'S PRESSES ARE MANUFACTURED BY THE MIEHLE PRINTING PRESS AND MANUFACTURING CO. AT CHICAGO AND ARE SOLD IN GREAT BRITAIN AND IN BRITISH OVERSEAS TERRITORY BY THE

Regulating Prices and Wages.

Interesting Case from Queensland.

What is described as a unique case in industrial history recently came before the Arbitration Court in Queensland, when the Printing Industries Employees' Union and the Master Printers' Association, who have a Joint Council, were called upon by President M'Cawley to show cause why a particular award should not be cancelled. The Queensland Leader Co., of Ipswich, refused to join the Master Printers' Association in December last, and although no legitimate union grievance existed the office was declared "black," and the men left their employment. The dispute was referred to the Court, and on January 22nd last the President ordered that the strike should at once be terminated; that the unions should cease to exert any pressure upon the company to join the Employers' association, and that they should give the Queensland Leader Co., Ltd., the labour necessary to carry on the business in the ordinary way.

During the hearing of the case some interesting evidence was given concerning the regulation of the affairs of the printing industry, whilst the president gave voice to some strong comments.

The president referred to an arrangement between the Union and the Master Printers' Association, and asked what were the relations between the Union and the Joint Council.

Joint Action by Masters and Men.

Mr. Alderman M'Gill (on behalf of the Queensland branch of the Printing Industry Employees' Union) said it appeared that the trouble in the printing industry a little while before was due to the fact that there was cut-throat competition between the master printers. A movement was set on foot to eliminate that competition, resulting in the formation of the Joint Council, in which employees and employers co-operated. The object was to secure fair prices for the master printers and to enable better wages to be paid to the employees. Discipline was exercised by the Joint Council to see that fair prices were charged.

On the question of enforcing discipline, the President asked if it was not a fact that the Union had threatened to withdraw labour from other firms, and that that was what had happened at Ipswich.

Mr. M'Gill said what had happened at Ipswich was that the particular firm in question had played false on several occasions. Mr. M'Gill agreed that members of the Union would not work for any man who was not a member of the Association, but the object of the arrangement was to promote peace and harmony in the industry.

A Unique Strike.

The President subsequently observed that the men on strike told him that they had no dispute with the employer, except over the question of joining the Master Printers' Association. That was the first strike like that that he had come across in the history of industrial matters.

Mr. H. D. Macrossan, on behalf of the Master Printers' Association, said there was no undertaking or honourable understanding given to the men that if they went out on strike they would be paid. Pay took the form of employment. He thought the president might assume eventually that the funds would come out of the Joint Council.

Mr. Macrossan contended that under the Act the president had no power to interfere with an industrial agreement made between the Master Printers' Association and the printing trade union.

His Honour: "If an agreement conflicts with the award or order of the Court, the agreement must go."

At a subsequent hearing evidence was given showing that a "little coercion or gentle persuasion" had been used to induce a master printer to join the Association, and that there was an implied agreement between the P.I.E.U. and the Master Printers' Association, that unionists would not work for master printers who were not members of the Association, and that the men who struck at Ipswich were paid out of the annual subscription of £1,000 paid to the Master Printers' Association.

Joint Industrial Council Development.

In answer to a question by the President, Mr. Macrossan said the Joint Council scheme was founded on similar schemes in England and South Africa.

The President later on observed that while a scheme such as that which was under discussion might be all right if properly checked by a public body which would regulate and control profits and prices he did not think the community should be left to the will of the employees and employers to fix a close corporation. Just as the wages should be regulated by a public authority, prices should be regulated by a public authority, but in the present case they were regulating prices by a private agreement. The president added that the wages and conditions stipulated might be right, but the arrangement was wrong. Any arrangement which provided for direct action to compel a man to join the employers' association could not be right.

Mr. Besley, vice-president of the Master Printers' Association, said no such arrangement was made. The arrangement was that if a man was a menace to the well-being of the majority of those engaged in the industry the Union and the Master Printers' Association could separately do what they liked.

The President: "Or jointly do what they liked. Was there any understanding that unionists should not work for others than members of the Master Printers' Association?"

Mr. Besley said there was no definite agreement. It was implied. If they could not protect themselves, who would protect them under the present law? Why should anybody be permitted to come into the industry in Queensland without any knowledge of Queensland costs and offer to do the work for half the price? The last man who did that had a hectic time for two years and then failed for £10,000 or £12,000.

Mr. E. A. Douglas, for the Queensland Leader Co., Ltd., said the arrangement between the Union and the Master Printers struck a blow at the root of arbitration awards. It meant that the masters and men could dictate prices and they could dictate who should or should not be members of the Union and the Association.

Mr. Macrossan said the object of the strike was to maintain the standard of wages in favour of the employees in the industry, which standard was made with the approval of the Court.

After adjourning the case for a few days, Mr. Justice M'Cawley, in the Arbitration Court, decided to make an award rescinding the industrial agreement and cancelling the award as far as it applies to the Queensland Leader Co. and jobbing offices in Brisbane and Ipswich. It might, he said, be desirable that the Legislature should amend the Arbitration Act so as to enable the Court expressly to control the activities of industrial councils, as it was obvious that the Court's awards might be defeated by combinations fixing prices unjustifiably high. The Legislature might, perhaps, consider the desirableness of co-ordinating the control of prices with the other work of the Court.

Canada and Australian Preference.

In the course of the interview which he gave on his return to Canada Mr. Frank W. Clarke, president of the Canadian Pulp and Paper Association, referred to the question of Australian Preference.

"The British paper manufacturers," he said, "were keenly interested in the situation brought about by the Australian-Canadian trade agreement and are following its developments very closely. When Canada was shut out of the Australian market by an impossible preference tariff, the British manufacturers fell heir to the business. Instead of supplying Australia with a few thousand tons as formerly, they are now supplying the bulk of that country's requirements, amounting to something over 100,000 tons of paper a year. They realise, of course, that if Canada ratifies the agreement, Canadian manufacturers will get a share of this business, and, like good competitors, they are doing what they can to prevent it. They express some surprise, however, that Canada has dallied with the matter for so long, since the advantages offered to the Dominion are so apparent. They are hopeful, quite naturally, that Ottawa will throw the agreement overboard altogether."

THE official guide to the British Industries Exhibition, 1925, mentions that the paper, printing and stationery section includes a collection of Empire stamps.

Australian Notes.

Wage Reductions — Trade Union's Progress — State Printing Abandoned — Large Newspaper Press Installed — Commercial Items — Obituary Notices — A Protection Proposal.

(From Our Sydney Correspondent.)

UNSETTLED conditions have followed as the result of recent reductions of wages in the printing and allied trades. An amended determination of the Victorian Printers' Wages Board, which was to come into operation on March 9th, provides for reduction of from 4s. to 10s. per week for adult males. Other employees are reduced in proportion. Provision is made for a basic wage of £4 4s. a week, with varying rates up to £5 10s. From March 16th, the wages of cardboard box employees were to be reduced by 3s. 6d. per week, for men employees in most cases, and by 2s. or 2s. 6d. per week for women. From March 20th there were to be decreases from 2s. 6d. to 6s. per week for men, and 3s. 3d. to 4s. 3d. per week for women, in the storing, packing, and sorting industry. The Printing Industries Employees' Union strongly resented the award, and submitted a log of claims to the Arbitration Court, against which a counter-claim was lodged by the employers.

STEADY improvement from the view points of finance, increased membership, and general outlook are reported in the annual report of the Amalgamated Printing Trades Union for 1924. The balance sheet, according to the report, "reveals a very healthy state of affairs, considering the very heavy expenditure incurred, such as exceptional unemployed payments and heavy legal expenses."

THE Government Printing Works at Rabaul, New Guinea, have been sold by the Federal Nationalist Government, and are now a private concern. Strong protest has been made by the employees, who have suffered loss of Civil Service status, with reduction of wages and deprivation of many privileges.

AT the *Herald* printing offices, at Flinders-street, Melbourne, a new 100 ton printing press, said to be the largest in the Southern Hemisphere, has been installed. It is a Hoe heavy unit type octuple rotary.

AN application has been granted for the compulsory winding up of the International Publishing Co. Pty. Ltd., of Collins-street, Melbourne. The application was made on behalf of C. H. Taylor Pty. Ltd., of Little Lonsdale-street, who in their petition set out that the International Publishing Co. was registered on March 15th, 1923, with a nominal capital of £5,000. Petitioner obtained judgment in the County Court against the company for £65 3s. 1d. on May 13th, 1924, and the judgment was unsatisfied. The company, in the opinion of the petitioner, was unable to pay its debts.

THE partnership business recently carried on by Emily Jane Brown and William Finn, at 18, Elizabeth-street, Sydney, under the firm or style of Thomas Brown, as engravers and die sinkers, has been dissolved by mutual consent. The said business will in future be carried on by William Finn and Michael Shalitt at the same address.

AMONGST recently formed new companies is the Motor Weekly, Ltd., registered with a capital of £2,000, to take over as a going concern the business of newspaper proprietor and publisher, lately carried on by A. L. Alexander, at 84, Pitt-street, Sydney, together with the copyrights and publishing rights of the paper known as the *Motor Weekly*.

FIRE partly destroyed a building of four storeys, occupied by Jonas and Co., printers, in Bathurst-street, recently.

THAT Australia can produce children's toy books and Christmas books and other printed matter, that would be just as good—if not better—than the imported article, was claimed by a deputation that recently pressed upon the Commonwealth Government a plea that a duty be placed on such matter imported into

Digitized by Google

the country. Without a duty Australia could not compete, the members of the deputation said, against the English and foreign production. Representatives of the Black and White Artists' Association, printing firms, Block Makers' Association, publishing firms, and Australian writers attended. They were asked to prepare a written statement giving facts and figures in support of their application.

THE death occurred recently of Mr. Robert Sands, governing director of John Sands, Ltd., aged 74. Mr. Sands was born in Sydney in 1851, being the eldest son of the late John Sands, who founded the firm of John Sands, Ltd., printers and stationers, in 1837. The firm of John Sands, Ltd., has become a tradition in trading concerns. It is the oldest firm in Australia carried on by the same family and under the same name. Its account is the oldest in the ledgers of the Bank of New South Wales.

THE death has occurred of Mr. James Daniel Beatty, a member of the firm of Beatty and Richardson, printers, for 35 years. He was a native of Sydney, and served his apprenticeship at the establishment of W. M. Maclardy and Co.

New Zealand Paper Market.

Statistics published by H.M. Trade Commissioner at Wellington indicate the value of the New Zealand market to the British paper exporter. The figures, which refer only to the more important classes of imports into New Zealand, show that shipments of paper, printing, etc., and stationery to that market during the final quarter of last year represented a value of £244,308. By far the largest contributor to this total was the United Kingdom, whose supplies amounted to £153,082. Canada was the next largest supplier with £74,530; followed by the United States, £12,562; Australia, £3,452; and then Japan, £681.

Papermaking in Tasmania.

The prospects of Tasmania becoming a new source of paper supplies were emphasised by Colonel R. Eccles-Snowden, the Agent-General, in an address at the Royal Colonial Institute. The great hope we have now before us (he said) is in the production of wood pulp for paper manufacture. It has been proved that paper pulp can be produced on a commercial scale from our Tasmanian works. A conservative estimate of the requirements of the Australian paper market sets down the amount at 90,000 tons per annum, and with a supply of raw material in enormous quantities and other advantages, there is every prospect of an enterprise of this nature being highly successful.

IMPORTS into Esthonia of paper and printed matter during March were valued at 14 816 thousand E. marks, exports during the same month being 84,810 thousand E. marks.

New Composing Machines Bring New Business

¶ One of our customers tells us that the **extra** work he has been able to handle since he replaced his old, out-of-date machine with an Intertype has paid for the installation.

¶ It is a demonstrable fact that keeping a machine too long—failing to take advantage of new inventions successfully applied in the trade—is a definite source of loss.

¶ There are many British printers to whom we should like the opportunity of proving that an up-to-date Intertype—the Better Machine—will quickly pay for itself out of the **extra** work its installation makes possible. If you have an old composing machine, let us discuss this matter with you. Send a card to-day—there is no obligation.

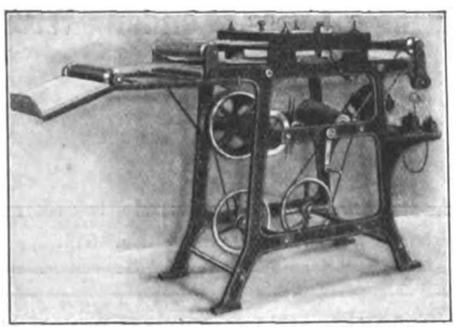
Intertype Corporation. Casting mechanism for typographical machines. 234,468.

Paper Box Trade Board.

The Minister of Labour having published notice of his intention to make a special order altering the description of the paper box trade as contained in the schedule to the Trade Boards Act, 1909, and certain objections having been made, the Minister has appointed Mr. C. E. Dyer, K.C., as Commissioner to hold a public inquiry. The inquiry will be opened at 10 30 a.m. on July 8th, at 5, Old Palace-yard, Westminster, S.W.1. Any person desiring to appear and be heard should send to the Commissioner in writing at this address as early as possible, and in any event so as to reach him not later than June 24th, a summary of the representations and evidence he desires to submit.



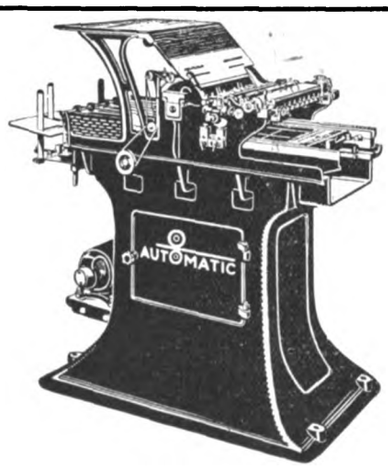
Australia and Scandinavian Paper.

In the course of the annual report of the Swedish Transatlantic Shipping Co. the directors state that a distressing event is to be found in the large diminution in the exports of paper from the Northern countries to Australia, which took place in 1924. The chief cause of the decrease is attributed to Australian preference granted to Great Britain.

Thermoprint Machine

for

Relief Printing Work without the use of STEEL DIES.



"Thermoprint" gives embossed work in all colours and bronzes for all classes of paper and carton.

Write for Catalogue and Samples to the Manufacturers:

Spezialmaschinenfabrik für graphische Maschinen, Dr. Stein & Co., Dresden-N.6.

DEALERS AND AGENTS WANTED EVERYWHERE.

1,800 PRINTS OBTAINED WHEN FED BY HAND. 2,500 PRINTS OBTAINED WHEN FITTED WITH AUTOMATIC FEEDING APPARATUS. 5,000 PRINTS OBTAINED WHEN FITTED WITH FEEDING APPARATUS FOR ENVELOPES.

Principal Advantages offered by

"AUTO-PLANO" Precision Speed Press

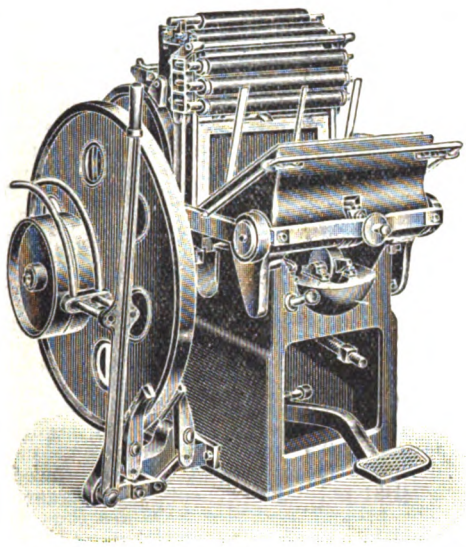
with built-in motor adapted to all currents:

QUICKER MAKING READY BY MEANS OF POLISHED PRINTING SURFACES.
SMALL ROOM AND LITTLE POWER REQUIRED.
SIZE: 9½ × 12¾ INCHES.
NO DANGER TO ATTENDANT.

For Prices, Catalogues, etc., please apply to

"AUTOMATIC," Aktiengesellschaft für Automatische Druckmaschinen, Berlin-Borsigwalde (Germany)

MANUFACTURERS



of small High Speed Precision Presses with automatic feeding apparatus for sheets and envelopes, also Semi-Rotary Printing Machines for printing in one or more colors, both on front and on back, stamping and embossing, perforating or cutting in longitudinal and transverse direction, also cutting temporary counting, scoring, holing, punching, numbering, stacking and re-winding, for the manufacture of every kind of small printed matter, such as receipts, tickets, labels, admission tickets, post-cards, visiting-cards, cheques, sealing marks, etc., etc., also Automatic Printing Presses for making needle and clip-tickets. Rotary Printing Presses for special purposes made to order.

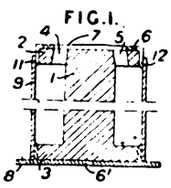
New Inventions

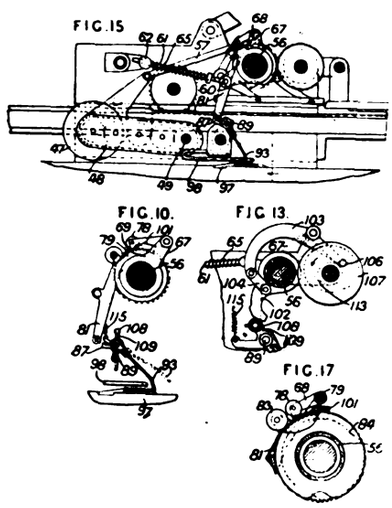
Inking Apparatus.



In an invention patented by the Miehle Printing Press and Manufacturing Co., the inking rollers and vibratory rollers of a printing press are mounted in a common support in such manner as to be movable out of engagement with respect to each other when the rollers as a whole are moved into inoperative position, and means are provided for firmly locking the inking and vibratory rollers in contact with one another when they are in operative position. The rollers and their common support are removable as a single unit from the machine, and slip means are associated with the driving mechanism of the vibratory rollers to prevent excessive endwise movement which might result from operation of the press for a fraction of a cycle while the rollers

are in inoperative position. The vibratory roller 15 is carried by brackets 20 rigidly secured to the shaft 17 by pins 21, and the inking rollers 13, 14 are carried by brackets 16 loose in the shaft 17, but having widened slots 18 engaging feathers 19 thereon, so that when the rollers are swung into inoperative position, as shown by dotted lines in Fig. 3, the roller 15 is separated from the rollers 13, 14, the brackets 16 of the latter having stops 22 engaging a cross-bar 23. For firmly locking the rollers in contact with each other when they are in operative position, the brackets 20 of the vibratory roller 15 are provided with stop buttons 24 adapted to contact with stops 25 on the brackets 16 of the inking rollers, these stops being held in contact by locking devices such as 26, Fig. 5, each operated by a handle 29 and having a semi-circular flange 28 adapted to be turned behind a pin 27 on the brackets 20. The shaft 17 supporting the brackets and rollers is held in the impression cylinder frames 12 by means of projecting members 31 engaging slots 30 in the brackets 20, so that, by slipping the slots over the projection 31, the shaft 17 and its attached brackets and rollers may be detached from the machine as a single unit. Excessive endwise travel of the operating screw 37, Fig. 7, of the vibratory roller 15 is prevented by the following means. The screw 37 works in a nut 38 rotatable within a bearing 39, the friction between nut and bearing being sufficient to prevent rotation of the nut during normal running of the machine. Collars 40, 44 rigid with the screw carry projections 41, 45 adapted to co-operate with projections 42, 46 on the sleeve nut 38. If the press is moved whilst the rollers are in inoperative position, it may happen that on bringing the rollers again into operative position the time relationship of the vibratory roller to the other operative press parts is disturbed, tending to displace the screw 37 beyond the limit of its endwise movement in one or other direction. In that event, one of the projections 41, 45 will engage one of the projections 42, 46 on the nut 38 and rotate it in its bearing 39, thereby preventing excessive endwise travel of the screw.

Printers' Rollers.



Under an invention patented by Mr. D. A. Aspinall, inking-rollers for printing and like machines are formed by casting the roller composition on a flanged core of hard wood or other sufficiently rigid material. The core 1 is placed in a mould comprising end caps 6, 6¹ and a cylindrical tube 9, the caps being adapted to fit over the end flanges 2, 3 of the core and into the tube 9. Holes 4, 5 and provided in the flange 2, and an opening 7 is formed in the cap 6 so that the composition can be poured into the

mould when the core is in a vertical position. Slits 12 in the cap 6 allow the air to escape and provide means whereby the cap can be gripped to facilitate its removal. A flange 8 on the lower cap serves to aid its removal from the flange 3. The inner edges 11 of the caps are chamfered to give the desired contour to the rollers.

A Sheet Feeding Device.

A sheet-feeding device for printing and like machines, as patented by Messrs. Swart & Co., Inc., is constructed with sheet feed tables and reciprocating gripper devices for forwarding sheets to front stops as described in Specification 228,618, and the machine

is also convertible into a hand-fed machine, as described in Specification 228,816. According to the present invention, the means for separating the sheets from the feathered bank comprises two similar sets of combing rollers 47, which are in duplicate, are controlled in a similar manner by spring-pressed toggle mechanism, and are raised by sheet-controlled means. The spring of the toggle mechanism causes the rolls to press on the bank when the toggle is broken in the downward direction, and raises the rolls with an accelerating motion when the toggle is broken in the reverse direction. Each combing roller 47 is mounted in an arm 48 pivoted about a constantly driven shaft 49 geared to the rollers 47. The arms 48 are connected by links 57 to projections on freely mounted sleeves 56, on which are arms 60 pivoted to spring-controlled toggle arms 61 passing through guides 62, the toggles being shown in Fig. 15 as broken in the downward direction with the rollers 47 in position to act on the sheet. The separated sheet is forwarded by the rollers 47 under a guide 98 and over a grid-like support 97, which raises the front edge of the sheet to facilitate the action of the grippers, and the sheet is arrested by trip fingers 93 suspended from a shaft 89 fitted with a catch 87, which normally holds a latch lever 81, as shown in Fig. 15. When the lever 81 is released, it moves clockwise and permits a spring-pressed pawl 68 on an arm 67 integral with sleeve 56 to engage a constantly-driven ratchet wheel 69. A cam surface 79 on lever 81 normally prevents such engagement. The arm 67 and sleeve 56 are thus moved clockwise and the toggle 60, 61 is thus moved past its central position and the roller 47 raised and held raised by the adjustable spring 65. The pawl 68 is subsequently tripped by the action of a raised part 101 of the cam 79 on a roller 78 on the pawl arm, and the lever 81 is returned to the position shown in Fig. 15 by a cam 84, Fig. 17, driven independently by gearing from the shaft 74. The latch 87 is moved counter-clockwise to permit return of the lever 81 by a cam arm 102, Fig. 13, mounted on the sleeve 56 and connected by a link 104 to a lever 103 controlled by a cam 107. As shown in Fig. 13, a roller 108 on an arm 109 on the shaft 89 of the catch 87 is acted on by the cam 102 to keep the latch 87 depressed against the action of a spring 115. When the raised part 113 on the inside of the cam 107 acts on the roller 106, the cam arm 102 and the sleeve 56 are moved counter-clockwise and the latch 87 is restored by the spring 115 and again holds the lever 81, the feeler 93 moving from the dotted to full line position in Fig. 10. The movement of the sleeve 56 moves the toggles 60, 61 past the central position, and the spring 65 then depresses the roller 47 on to the bank to forward another sheet. The separated sheets are forwarded to the machine by reciprocating grippers, as described in Specification 228,618.

Wood pulp exported from the port of Vancouver during 1924 reached 42,000 bales.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE spell of hot weather has served to emphasise the need for a closer official supervision and control over the wrapping of foodstuff. But a few years back there was practically no attention devoted to the subject, and hygienic bread wrapping would have been accounted almost an extravagant novelty. Progress has been sufficiently rapid to make sealed bread rather the rule than the exception. In other directions, the development has been too slow, and there is no hope of improvement until the Government sees fit to take steps which will make it compulsory to wrap foodstuff in a manner which will to a large extent safeguard the health of the nation. There is the classical joke about a prominent newspaper proprietor staying for a few days in a quiet health resort up North, whose whole desire was to escape from business or any reference to it during his stay. At his first meal fish was served and there on the underside was the remnant of an impression from one of the magnate's own papers. He paid his bill and cleared, thanking the proprietor for what he assumed to be a delicate compliment, but protesting against the manner of its conveyance.

* * *

THE proposal to increase the size of post cards has served to raise a small storm of protest among the holders of picture and plain post card stocks. Naturally each section of the industry must look keenly after its own interests, and it is certainly not to the interest of the picture post card section to commence preparing new originals of their subjects for a larger sized card which could not be sold at any higher prices than the popular figures now ruling. An alteration in size would immediately depreciate the value of stocks held, and in many other respects would plunge a standardised industry into temporary chaos In slightly less degree, all manufacturers and holders of stocks of plain post cards would suffer material loss. The proposal comes from the conveners of the Postal Union Congress, an institution which seems to indulge in changes detrimental to the interests of the stationery trade. About two years ago there was the resolution condemning the cut-out envelope, a stroke which cost manufacturing stationers to lose a lot of business, apart from compelling them to adopt new machines and methods. Now, as then, the postal authorities decide to identify themselves with a radical change without seeking practical opinion from the industry of the country.

* * *

PAPERMAKERS cannot be expected to adopt the same viewpoint as picture postcard publishers when it comes to increasing the size and therefore the tonnage of consumption of post cards. Naturally it is to the interest of the papermaker to support as large a post card size as will go in a pillar box. They would even cast their votes in favour of larger pillar boxes if necessary in order to accommodate post cards the size of a royal board. Here it may be noted that printed mailing cards up to a very large size have always been allowable under the postal regulations. Papermakers and stationers have not sufficiently pressed home to advertisers the value of the large mailing card, although one house has consistently kept before its patrons the elasticity of the P.O. regulations in this respect. If the new proposal to increase the size of the official post card could be applied only to plain or stamped cards and a sufficient period allowed to clear off stocks, the move would be beneficial to the papermaker.

Stationers' Social Society.

Successful Bowls Competition.

In glorious weather, the Bowling Section of the Stationers' Social Society on June 9th held its most successful meeting at Malden, by kind permission of the Malden Bowling Club. Everything was in favour of the event, and the arrangements made left nothing to be desired, thanks to the forethought of Mr. A.E. Mist (hon. secretary) and the ladies at Malden, who looked so well after the creature comforts of the visitors.

The bowling green at Malden is situated in beautiful country and is itself in fine condition. These and other amenities the members of the Society appreciated to the full, and they felt much indebted to the Malden Bowling Club for the privileges afforded them.

Under such conditions, and with so many bowlers of distinction taking part, it is not surprising that the competition for the Woollacott Cup produced play of a high order. Those who entered were Messrs. Price, Day, Bishop, Cairns, Fogarty, Griffin, Penman, Pinkett, Relph, Burholt, Porteous, Fells, Senior, Bristow, Hastings and Ling.

The bowling, as already indicated, was of a high order, and was enjoyed alike by the players and the spectators. By a process of elimination, Messrs. Cairns and Fogarty and Messrs. Burholt and Ling were left to play in the semi-final, Messrs. Cairns and Ling earning the right to meet in the final. In the end, Mr. Cairns, whose superb exhibition won the admiration of all, succeeded in winning the cup for the second year in succession. His performance was all the more creditable since his opponent in the final (Mr. Ling) was champion of the Malden Club last year.

The Woollacott Cup was subsequently presented to the winner by Mr. M. Relph, who suitably complimented Mr. Cairns on his prowess.

Mr. Cairns, in reply, observed that he was naturally gratified at his success. He had tried hard to win, but he would have been equally pleased had Mr. Ling beaten him in the final. He hoped to try again next year, though he indicated that his wish was that someone else might be successful.

In the way of creature comforts the visitors were well provided for. Mrs. Ling and a number of ladies had arranged a very acceptable lunch for the company. So pleased was everyone with the hospitality shown, that Mrs. Ling is to receive a little memento of the occasion.

Mr. Chas. Newell, the President of the Society, took the opportunity at the luncheon of expressing the indebtedness of the Stationers' Social Society to the Malden Bowling Club for their courtesy in placing their green at the disposal of the Society. He also thanked Mrs. Ling and her lady helpers for the excellent lunch they had provided. Proposing a vote of thanks to the Malden Club, Mr. Newell associated with it the name of Mr. H. Ling (the president).

Mr. Ling, acknowledging the resolution, said the Club was delighted to welcome so genial a body of players as attended that day, and they would be only too pleased if the visit became an annual fixture. Their anticipations of a delightful day had been fully realised.

Later in the day tea was also served, the comfort of the visitors being met in every way.

Among those who attended were: Mr. Chas. Newell, C.C. (President of the Stationers' Social Society), Major Craster, and Messrs. F. L. Cayzer, J. T. Steele, T. Dryer, —. Baker, R. J. Smith, F. Crossley, A. H. Moody and A. E. Mist. The only unfortunate incident in an otherwise perfect day was the absence of Mr. A. Woollacott, which was due to the death of his mother on the previous Friday.

The "Super-Imperial"

Four-sider Disc Ruling Machine.

For Feint Lining only or Feint Lining and Striking 2, 3 or 4 Colours on both sides of Sheets, both ways, at one operation.

With Latest Model Ream Feeder attached, Patent Pile Feeder, or Patent Pile Suction Feeder, with Single or Duplicate Tables.

This Machine will rule both sides, both ways, at one operation, at the rate of 10 to 15 reams per hour, according to size of sheets.

Improved Patent Turn Table and Latest Style Layboy with Back and Side Joggers, included with machine. The "Bailey" Patent Rotary Perforator Attachment, and Shaw's Patent Sheet Cutter can be attached.

A large supply of Discs and Spaces and Disc Rods, and full compliment of Accessories supplied with each machine.

Two Horse Power only required to drive Machine and Feeder, either from Shaft or direct from separate motor. **One Drive** only necessary.

This Machine is very fast, and saves time and labour in handling paper. A very good class of work can be obtained.

We can add Patent Turn Table to our Single Sider Disc Machines and well-known Striker Pen Ruling Machines, for Feint Lining only or Feint Lining and Striking, on one side of the paper **both ways at one operation.**

For Hand Feeding only or with any of our different classes of Feeders attached. We can supply machines both for Hand Feeding and with Feeder combined.

Printers' Costing Problems.

X.—The Advantages of a Standard System.

The word "standardisation" is anathema to many, but no individual in a civilised community can turn in any direction without being affected advantageously by its results.

Organisation—Standardisation—Civilisation.

Standardisation is sister to organisation, and without both civilisation as we know it would disappear. By organisation we live and move, by standardisation we enlarge the sphere of our activities.

There are many people who profess to be individualists and consider it to mean superiority, but the real individualist lived even long before the days of the bow and arrow, and exercised his individualism by the strength of his own right arm, which usually wielded a stone axe.

There are others who believe that no standard can or should be applied to them as they are different from anything which has hitherto been seen or heard of, they are a "peculiar" people.

The Creed of the Objector.

Standardisation means working to a rule, and this is the sum and substance of the creed of every objector to its application. We are all good rule-makers, but we usually prefer to make rules for others to use. The man who professes to be least interested in any sort of organisation would be among the first to complain if his letters were late in arriving, or if his replies thereto were delayed in delivery. He would also be much distressed if it were necessary to alter the hands of his watch (a splendid timekeeper in Lonchester) every time he visited Mandon.

Applying the Results of Experience.

But what has this to do with "Costing Problems?" So much, that the answer to many questions is similar. What may appear to be a problem to the individualist who has a peculiar business, and who does not believe in organisation, has been solved elsewhere by the use of a formula that has been made standard after many applications where similar circumstances have arisen.

If a doctor is called in to see a patient, his first business is to find the seat of the ailment, which not infrequently indicates what the ailment is. If satisfied with his diagnosis, he prescribes a remedy—more often than not it is a standard specific known to have been effective in similar cases. The patient would have much greater faith in the medicine if he knew it had cured others than if the doctor told him he was trying an experimental medicine.

Standardisation or Chaos.

There is shortly to be celebrated the centenary of British railways. Some of the early railroad pioneers foresaw the necessity for a standard gauge; others were individualists, and did not visualise the expansion of the railway system as we know it to-day. The result of working independently led to different gauges being used by different companies—and to confusion. By standardisation of gauge it is possible to-day to travel both lengthwise and across the whole of England and Scotland without a change of coach. Anyone who has been obliged to travel for long distances over the lines of different companies knows something of the discomforts experienced in the past through the lack of co-ordination.

Delays Due to Non-Standardisation.

Occasionally one hears complaints from printers that certain machinery makers never seem able to supply a new part to replace a broken or worn-out one without the old part being sent on for inspection. These printers realise the value of standardisation in this respect. Are they equally alert to the standardisation which they themselves can apply to their costing methods?

How Standardisation Does Benefit.

The mention of a "Ford" in certain motoring circles would cause a smile, to which various adjectives could be applied according to, shall we say, the wealth of the individual, but standardisation of parts has produced a machine which has brought a motor van for delivery purposes within the reach of many. The same methods are producing a certain British car at the rate of 2,000 per week, which is giving pleasure to as many users.

Dare the Individual Printer Ignore Standardisation?

If standardisation is leading to economy in production, to comfort in travel, to facility in sport, and in many other directions, it is a matter which cannot be ignored by the printer in so far as his costing is concerned. The idea is not new, the formula has been tested out, disease has been cured, health has been restored. If the individual firm can benefit by the application of a standardised system of costing, why not the body politic?

The progress of civilisation owes almost everything to the printed word. Discovery in every branch of the sciences has been made known to the uttermost ends of the earth by its means. Thoughts which have welled up in the minds of philosophers and statesmen have been reproduced in print and in many languages for the edification and encouragement of all nations. As printing has been the principal vehicle for the transmission of all knowledge, it is to be expected that it should itself be in the forefront of learning.

The Industry Leads.

And so it is. As an industry it leads in matters relating to scientific costing by industries. If there is any other kind of business in which work is built up of such complicated and minute details it is unknown to the writer. But these difficulties have been met and surmounted and the principles laid down in the printers' Standard Costing System are the results of careful and persistent application and research.

The Work of the Pioneers.

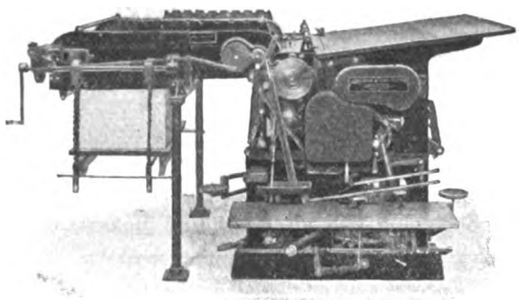
Just as the doctor watches his patient and takes careful note of the changes which follow the application of any remedy, so have those responsible for the preparation of the printers' costing formula, as well as those applying it, noted the effects, and by variation and modification perfected the methods.

Standardisation is the forerunner of economy. Any economy in production, even if it is immediately passed on to the consumer, must ultimately benefit the producer by the reason of the increased demand for the article he produces.

Standardisation plus Brains Blazes a Trial.

Standardisation of costing is not a substitute for business acumen, neither will it do away with competition. It is an aid to better business because it opens out blind alleys—the dead ends—and throws light into dark places. It has made a broad pathway on which competitors may walk side by side, where formerly the path was difficult to find and easily lost again.

How Help is Given.



The application of a standard system of costing by members of the same industry makes it possible to separate the cost of units of production which are common to all and by comparison reduce and refine those costs until a minimum is reached. Where producers are working independently and finding no common ground on which to meet and compare notes, competition cannot be other

Digitized by Google

L&M

OFFSET LITHO ROTARY

WITH PILE DELIVERY.

FEED SIDE OF THE L&M OFFSET LITHO ROTARY WITH PILE DELIVERY.

This is a two-revolution press—a very desirable feature in a machine for colour printing in dead register. The printed sheets are delivered face up on the pile clear of the machine at a convenient height for examination. The plate cylinder is of large diameter, which facilitates perfect inking, damping, and manipulation of the plate. The damping mechanism is placed below the plate cylinder, so that splashing of water does not affect any other part of the machine. The ink distribution is highly efficient. A combination mechanism automatically trips the impression cylinder, inking rollers, ink-ductor, and water-ductor rollers. The machine attendant can fully control the press without leaving his seat.

It is built with Pile Delivery, but can be supplied with an ordinary delivery board if desired.

This Offset Press is built in three sizes:—

Machine No.	Size of Sheet. in. in.	Size of Design. in. in.
No 1	37½ x 52	37 x 52
No. 2	33½ x 45½	33 x 45½
No. 4	25 x 37	24½ x 37

LINOTYPE & MACHINERY LTD.

9 KINGSWAY, LONDON, W.C.2

than ignorant and blind, producing results which benefit neither producer nor consumer in the end.

Still More Help.

The use of a standardised system of costing makes it possible to set up results in such a form that any serious divergence from those results indicates a state of affairs calling for careful inspection and drastic remedies. Business is not built up by blindly trimming away until a suitable price is reached. The surgeon's scalpel does not work more carefully among the living tissues than should a business man among his costs to-day if he is to be successful. For him to cut his expenses without regard to effect, as a clumsy butcher may hack a carcase, is much more disastrous.

Common sense dictates that what has proved beneficial to many is worth the attention of others.

Much Travelled Papermaker.

Manxman's Enterprises in U.S.A.

A reminder of the old papermaking days in the Isle of Man comes in the news of the death of Mr. John Lewthwaite in Oregon City, U.S.A.

This Manxman had a remarkable career. He was a son of Alexander Lewthwaite, junior partner in the firm of J. & A. Lewthwaite, carrying on business at Baldwin and Laxey paper-mills. His home was at "Eden Vale," in Laxey Glen, from about 1846 till the closing down of the Laxey mill in 1855.

He followed his parents to America about the year 1858—crossing the Atlantic in a sailing ship—and as a youth took up the family occupation of paper-making. The Civil War, however, broke out shortly after, and John Lewthwaite enlisted in the 77th New York Infantry, when in his eighteenth year. He was through some of the heaviest engagements of the war—including the terrible battle of Gettysburg—and figured on the casualty lists more than once. At the battle of "the Wilderness" he was left on the field for dead, and afterwards spent eight months in hospital.

Returning to his paper-making at the close of the war, he decided to try his fortunes in the West; and in the year 1867 he travelled by the Panama route to California. He stayed at Stockton, Cal., till 1888, being superintendent of the papermill there for many years, and then undertook the partial supervision of the new mill of the Willamette Paper Company, at Oregon City. In 1892 he moved, with his family, to Oregon for permanent residence. Other paper-making plants, in California, Oregon and Washington were established or developed under his control or guidance—as were also the great mills at Powell River and Ocean Falls, in British Columbia.

In connection with the foregoing history, it is interesting to recall that when the Manx Electric Railway began operations in 1894, the main building of the old paper mill was utilised as a power house.

EDINBURGH Corporation obtain a revenue of £300 a month from about 160 tons of waste paper, collected, sorted, baled and sold to merchants.

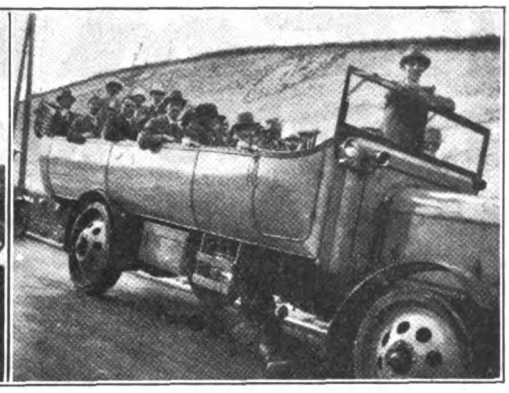
North London Master Printers.

Visit to Eynsford Paper Mill.



By the courtesy of Messrs. Spicers, Ltd., members of the North London Master Printers' Association and their ladies paid a visit on Tuesday to the Eynsford Paper Mill, where they were greatly interested in the processes of hand-made paper manufacture. The party proceeded from Finsbury Park by motor charabanc, accompanied by Mr. Horace Higgins, a director of Spicers, Ltd. An interesting run through London and Blackwall Tunnel and a glimpse of the orchards of Kent brought the visitors to Evnsford, where they were received by Mr. W. Oliver, a director of Spicers, Ltd., who is responsible for the Eynsford Mill.

Round the Mill.

Before proceeding on a tour of the mill, Mr. F. Hussey, the chief papermaker, who has had a life-long experience in the hand-made craft, explained the various steps in the manufacture of the high-grade papers made at Eynsford.

Left to right: Mr. F. Hussey (foreman papermaker); Mr. H. Higgins, Mr. W. Wilson (president, North London Association) and Mr. W. Oliver.

Mr. W. J. Mizen (hon. secretary) on the look out on Wrotham Hill. "Running repairs" by the chauffeur.

The plant embraces eight vats and two mould machines, for making ledger, currency, drawing, de luxe printings and special watermarked papers. Mr. Hussey explained the great care which was exercised in the cleansing of the rags and in the whole process of manufacture, the object being to eliminate every particle of extraneous matter and to leave the sheet clean and perfect in every respect.

The tour of the mill, under the careful guidance of the gentleman mentioned, began with the rag store and the rag cutting house. The dusting, cleansing and beating of the rags into half stuff were all carefully explained, the visitors being particularly impressed by the beautiful whiteness of the fibrous material. In a hand-made paper mill, of course, the great feature of interest is the skill with which the papermakers manipulate their moulds, lifting just sufficient of the pulp to make a sheet of the substance required. The consistent weight of the sheets turned out is a matter of astonishment to the uninitiated, although the skill with which they are subsequently handled is scarcely less remarkable. A visit to the sizing department and to the drying-room followed, and finally the salle was inspected. Here Mr. Hussey graphically indicated the great variety of sizes of sheets made by calling attention to a large antiquarian sheet (53 by 31) and comparing it with a piece the size of a visiting card. In between these two, of course, there are an infinite number of sizes manufactured to suit the various requirements of customers. It should be mentioned, in reference to the efforts made to attain perfect cleanliness, that the water used, which is enormous in quantity, is drawn from two springs at a depth of 240 and 250 feet below the ground.

Generally one was impressed by the amplitude of light and air and space in the several departments, and these conditions were reflected in the healthy and happy appearance of the workpeople.

An Amateur Competition.

At the conclusion of the inspection, the lady members of the party were invited to enter a competition on their own account in making hand-made paper, and subsequently it was announced that Mrs. Cordon had made the best sheet, Miss Wilson coming second. These ladies will subsequently visit the stationery department of Messrs. Spicers, Ltd., at Blackfriars House, and will receive a little present in recognition of their dexterity.

Subsequently the visitors were entertained to tea at the "Lion" Hotel, a very welcome provision after the exertions of the day.

Vote of Thanks.

Mr. W. Wilson, the president of the North London Master Printers' Association, expressed the thanks of the visitors to Messrs. Spicers, Ltd., for their generous hospitality, and to Mr. Higgins and Mr. Oliver and the other gentlemen who had explained the processes of hand-made paper manufacture.

Mr. F. J. Collins, in seconding the resolution, said such visits as they had paid that day brought master printers and the papermakers into closer contact and enabled the users of the paper to understand more clearly the difficulties which the manufacturer had to contend with. Mr. Collins also took the opportunity of thanking Mr. Mizen, the secretary of the Association, for the excellent arrangements he had made for the day's outing.

Mr. Mizen also added his tribute to the courtesy of Spicers, Ltd.

English *v.* Foreign Papers.

Mr. Higgins, in acknowledging the resolution, referred to the value of visits of master printers to paper mills, in that they enabled both parties to understand each other's difficulties. In a reference to the correspondence which had taken place on the subject of American paper being used for Wembley certificates, Mr. Higgins said he had known some other culprits. He mentioned two cases of letters from sections of the Federation, which were written on paper bearing a United States watermark. Proceeding, he said the fine paper mills of this country were really in a sorry plight, and he thought it was for master printers to try and help them through a difficult period. He was not pleading for a tariff or anything else; there was, however, such a little difference between the English papers and the foreign papers in price, while there was no comparison as to quality, the English being easily the best, that there was no reason why the home product should not be used. Mr. Higgins added that every fine mill in the country was looking for orders, the majority of them running only half-time at the present moment.

A Hint to Master Printers.

Mr. Oliver mentioned that a good deal of British hand-made paper was sent into America, but of course there were no hand-made paper mills in America. As a hint to master printers who printed certificates and diplomas for examinations, such as the musical festivals held in North London, Mr. Oliver mentioned that these certificates were intended to be kept for years and were constantly being folded and unfolded. Only the best paper should be used for this purpose, and hand-made paper would stand all the handling to which the certificates were subjected. With regard to that particular visit, he was glad to know they had enjoyed themselves, and if instruction and profit could be added, then their hosts would be still better pleased. In a reference to the paper made by the ladies of the party, Mr. Oliver mentioned that all the sheets were exceedingly well made.

Before leaving on their homeward journey each member of the party received a packet of deckle edge hand-made note paper and envelopes with the compliments of Spicers, Ltd., as a souvenir of the visit.

The return journey was made by way of Wrotham Hill, Dartford, and the Woolwich Ferry, in a perfect summer evening.

Trade Notes.

A RECEIVING ORDER has been made in respect of G. A. Lewis, of the Regent Palace Hotel, and 17, Shaftesbury-avenue, London, stationer, managing director of a limited company.

UNDER a compulsory winding up order made against West's, Ltd., music publishers and theatrical agents, 12, Moore street, Charing Cross-road, W.C., the first statutory first meetings of the creditors and shareholders were held on Monday at the Carey-street offices of the Board of Trade. Mr. A. Granville White was elected as liquidator, with a committee of inspection, with a view to the sale of the business as a going concern.

MR. FREDK. J. BOLD wishes to announce that he is no longer connected with the firm Messrs. R. W. Crabtree and Sons, Ltd., and requests that any communications for him be, for the present, addressed to his residence, "Thorndene," Staines, Middlesex.

GEORGE NEWNES, LTD.—At the twenty-eighth annual ordinary general meeting of George Newnes, Ltd., held in London last week, Sir Frank Newnes, Bt. (the chairman), was able to report a most successful year's trading. In the course of his remarks he said: "The printing works in which, with Pearsons, we are jointly interested is fully occupied. We have one of the best equipped printing works in the country. Owing to the increasing printing requirements of both Newnes and Pearsons, it has become necessary to lay down additional machinery and to make further extensions in the works. The printing company do the printing of that very successful publication, the *Radio Times*, which Newnes publish for the British Broadcasting Co., and part of this new machinery is necessary to cope with the quick and efficient handling of this paper." The report and accounts were unanimously approved.

C. ARTHUR PEARSON, LTD., held their 29th annual general meeting in London on Tuesday, the Rt. Hon. Lord Riddell, the chairman, presiding. In the course of his remarks Lord Riddell said that the printing company which was founded some years ago had proved the most valuable adjunct to the company's business. It was admirably equipped and well managed, and his friend, Mr. Bathgate, who had been responsible in a great measure for the management, had rendered valuable services to Newnes and Pearsons in bringing the works to their present high state of efficiency. The joint arrangement between Newnes and Pearsons, whereby the businesses were managed by an operating committee, continued to work extremely well. The report and accounts were unanimously adopted.

THE annual meeting of the London District Committee of the Joint Industrial Council was held on Thursday, when an important item of business was the election of officers for the ensuing year. Mr. Woodgate Stevens (London Printing and Kindred Trades Federation) was elected chairman and Sir Cecil Harrison (London Master Printers' Association) vice-chairman. Mr. P. W. Boyd was re-elected treasurer and Messrs. W. Whyte and F. A. Davies were re-elected joint hon. secretaries.

ON Friday, July 3rd, the Stationers' Company will confer the honorary freedom and livery of their ancient guild on Lord Balfour, Sir James Barrie, and Mr. Rudyard Kipling.

A GARDEN PARTY in aid of the funds of W. Speaight and Sons, Ltd., Pension No. 1 will be held in the grounds of "Highfield," Golder's Green, on Saturday, August 29th. Tickets (adults, 6d.; children, 3d.) may be obtained from Hon. Ent. Sec., 98 and 99, Fetter-lane, E.C.4.

SCOTTISH NEWSPAPER PROPRIETORS.—Mr. John Brodie, *Arbroath Herald*, has been elected president of the Scottish Newspaper Proprietors' Association, with Messrs. A. Simpson, *West Lothian Courier*, and W. Kirk, *Dunfermline Press*, vice presidents; Mr. John Martin, *Kirkintilloch Herald*, treasurer; and Mr. T. Adams, J.P., C.B.E., *Edinburgh Citizen*, hon. secretary. Messrs. T. Adams and Johnson have been appointed representatives on the Scottish Alliance.

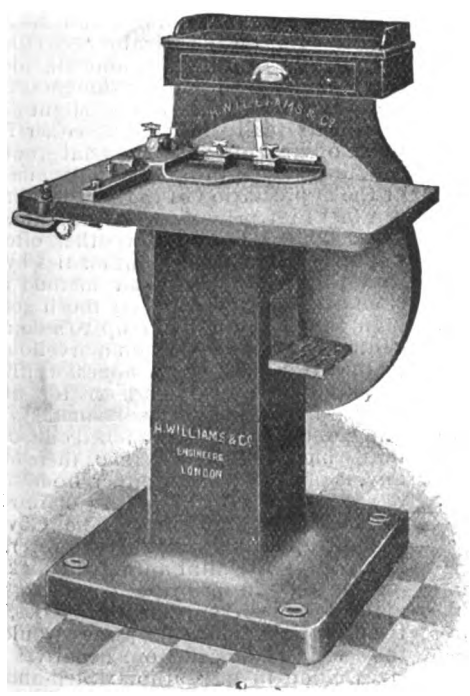
THE death took place on Friday after a long illness of Mr. John Shannon, J.P., F.J.I., editor and manager of the *Coleraine Chronicle* for 30 years and chairman of the Ulster District of the Institute of Journalists.

MR. CHARLES HENRY GREEN, head of the firm of Messrs. William Nimmo and Co., stationers, printers and lithographers, Constitution-street, Leith, has died at his residence, "St. Leonard's," Boswall-road. He was at business all day on Tuesday of last week, but suddenly turned ill through the night, and died early on Wednesday morning. A native of Edinburgh, Mr. Green, who was 58 years of age was well known in local printing or stationery circles. He had been associated with the firm for over 30 years, and became partner on the death of Mr. George Wilkie some 12 years ago. The funeral took place on Saturday at Warriston Cemetery, Edinburgh.

MR. SAMUEL STOREY, Chester-le-Street, Durham, founder and principal proprietor of the *Sunderland Daily Echo*, and interested in several other newspapers and periodicals in various parts of the country, who died in January, aged 85 years, left unsettled property of the gross value of £202,356, with net personalty £199,328.

TWO FIRST folio Shakespeares were sold at Christie's last Thursday for a total of £5,250.

AS A donation to the Newspaper Press Fund, Mr. James V. Bryson, managing director of the European Motion Picture Co., Ltd., has promised a percentage of the receipts at the Rialto Kinema (Coventry-street, W.1) during the four weeks' season of the film, "The Phantom of the Opera."



AN important conference of representatives of the large gas undertakings in this country was held at Birmingham on Friday, when among the papers read was one by Mr. J. Ennals, who spoke upon "Some Uses for Gas in Printing Works." He pointed out that a number of important London newspapers and periodicals used gas for melting stereo-metal in bulk, and a number of printers producing small periodicals also used gas for smaller pots.

WE have received from Fry's Metal Foundry, Holland-street, S.E.1, a handsomely got-up souvenir of the late Printing Exhibition. It consists of an ashtray made and modelled on the lines of the firm's "Fryotype" metal melting pot, and is beautifully finished in a solid nickelled metal, a perfect reproduction in miniature of the original popular melting pot.

The L.S.C. Jobbing Guild.

Impressions of the Printing Exhibition.

Mr. F. W. Bridges, organiser of the Printing Exhibition, occupied the chair at the meeting of the L.S.C. Jobbing Guild held in the L.S.C. Board Room on Wednesday evening of last week. His presenee as chairman gave special interest to the meeting as the Printing Exhibition was the subject for consideration, discussion being opened by the energetic secretary of the Guild, Mr. H. Naylor, with a paper on "Some Things I Saw at the Printing Exhibition."

In his remarks from the chair Mr. Bridges congratulated members on the keen craftsmanship shown by the good attendance that evening, and in introducing the subject of the Printing Exhibition he invited criticism, strongly urging those present to express themselves very freely.

Mr. Naylor began by congratulating Mr. Bridges on the success of the Exhibition and the benefit thereby conferred on trade, and he also thanked Mr. Bridges for financial help given to the Guild. Proceeding to his subject, he took his hearers back in thought to the Exhibition, and, starting at the Entrance Hall, pointed out stall after stall, with a running commentary on exhibits of special interest. A notable feature of the occasion was that Mr. Naylor had succeeded in collecting from exhibitors a big array of leaflets, booklets, catalogues, etc. (not omitting a copy of the miniature edition of the *British and Colonial Printer and Stationer*), which he used to illustrate his comments and passed round the room for inspection.

Of exhibits to which Mr. Naylor devoted special atiention one was that of the Typary and Typon Co., Ltd. He gave a short description of the manner in which the Typary text-typing machine produces, direct from a keyboard, good printed copy to be used for the production of photographic negatives by means of the Typon process, for offset printing. In referring to the exhibit of the Lanston Monotype Corporation, the speaker showed a novelty produced by that firm as an example of the state of perfection to which type matrix cutting has attained. This was the Lord's Prayer on pica quad body—a matrix having been cut to the size of 12 by 12 points to include the whole of the Lord's Prayer together with the name of the firm. Those present were given examples of this unique souvenir. Whilst on the subject of machine composition, the speaker referred to the wonderful development of the multi-magazine Linotype machines, which he regarded as constituting a challenge to the jobbing compositor, who was now called upon to utilise his knowledge and skill to the utmost in the endeavour to improve upon machine set display work. In regard to posters, very high praise was bestowed upon the results attained by Messrs. Langley and Sons, Ltd., in the production of posters by purely letterpress methods, and in referring to the Photo-Engravers' exhibit special attention was drawn to the fine effects—often rivalling lithographic pictures—that are now being achieved by block printing from "composition" surfaces.

In the discussion that followed, question was raised as to the running of white paper through printing machines instead of showing them actually printing. In reply it was suggested that the use of ink tended to mar the spic-and span appearance of a machine, and also hindered the clean and convenient examination of details of mechanism, whilst much time would in many instances have to be lost in preparation for printing, especially in the case of colour work. A suggestion that machines of similar kinds by different makers might be grouped together, in order to facilitate inspection and comparison, was thought to be impracticable. The Baker Sales Co.'s display of composing room fitments and supplies came in for very high praise, and more than one speaker urged the desirability that British firms catering for the composing department should at the next Exhibition make equally effective demonstration of the composing-room equipment they have to offer. When discussion turned to the Typary machine there appeared to be some divergence of opinion. One suggestion was that the very limited choice of type faces at present available and the limitation of measure (*i.e.*, line width) made the machine of little use except for book work, in respect of which it would have difficulty in competing with letterpress methods, but the view was also forcibly expressed that the Typary machine heralded a revolution in printing, as it already made possible the lithographic production of booklets, etc., entirely without the aid of the letterpress side of the trade. It was also suggested that the Typary method would greatly facilitate the compiling of such printed matter as catalogues in which a profusion of blocks of all shapes and sizes had to be interposed amongst text. A novel suggestion for the next Printing Exhibition was that a pageant should be introduced to depict the history of printing.

The vote of thanks to Mr. Naylor was proposed by Mr. A. E. Owen Jones, who found opportunity to chide British compositors upon being beaten by the foreigner in the matter of letter-head composition, and who also stated very emphatically that the great sensation of the next Exhibition would be photo-type-setting. The motion was seconded by Mr. Goodman and carried with enthusiasm, as was also a vote of thanks to Mr. Bridges, proposed by Mr. F. Harvey and seconded by Mr. G. J. Prentis.

Manchester Printing Crafts Guild.

Visit to Wall-Paper Manufacturers, Ltd.

Although the season of close study is placed in the background when summer arrives, we still find the members of this Guild willing to give up an afternoon in the open air and seek information between the four walls of a model works On Saturday last, by kind permission of the Wall-Paper Manufacturers, Ltd., Victoria Mills, Holmes Chapel, close upon eighty members undertook a railway journey to acquire knowledge of the manufacture of printed papers such as adorn the dwellings of mankind.

They were met at the station by Messrs. Jackson and Macdonald and after a circular ramble around the old-world Cheshire village they eventually arrived at the mill, where wall-papers of all classes were being manufactured. Some machines were running with as many as eight colours consecutively printed, and these proved very interesting, especially to the letterpress and lithographic printer. When the lithographic offset printer arrives at the consecutive colour production on such a large scale he may be forgiven for telling his letterpress friend that he is not in the running where economy comes in. Two hours' meandering through these works, seeing the careful engraving on copper and other rollers, the method of affixing copper designs to wood cylinders, and the buffing up of completed designs were greatly appreciated.

A short walk through pastures green brought the party to the Swan Hotel where the firm had prepared a sumptuous feast that satisfied appetites that had been sharpened by the fresh air of the countryside. When everyone looked content with the world President John Taylor proceeded to thank the firm for the hospitality and for the privilege of seeing an industry which makes dull homes bright and happy. A further pleasure was the opportunity of watching the employees play the village team at cricket. Excitement ran high at one time as several of the works batsmen were dismissed for small scores, and then two newcomers came in and began lifting the ball into fields away from the ground and to the railway line. The match ended as we desired, the Wall-Paper employees winning and having one or two wickets to spare.

Supporting the president were Mrs. John Taylor and Mr. Gerald Taylor, Mr. and Mrs. Bethell and daughter, and several others who were all able to motor out and join the young craftsmen who are serving their time in the various printing offices in the Manchester area.

WEE MAC.

UNEMPLOYED SWISS PRINTERS.—At a recent meeting of the presidents of the Swiss Printers' Federation it was decided that the unemployed members of the Federation, bachelors and without family claims, would be compelled to accept offers of work in other countries, and in the case of refusal forfeit their rights to the usual unemployment benefit. Switzerland is passing through a critical period owing to the rise in the rates of exchange, and the funds of the Federation are heavily taxed by unemployment. Hence this decision, which, however, is severely criticised by printers who do not like to be treated as merchandise for export.—*Courrier du Livre.*

Security Printing.

SIR,—I have read the article on "The Printing of Paper Money" in your issue of June 4th and note that a great deal of information is conveyed to the public, perhaps for the first time; but the article generally, if I may say so, as reprinted from *The Times* (Trade Supplement) is remarkable in that whilst it is generally appreciative of work that has been done, a great deal of information which the average printer interested in the technique of the work desires to know, has been omitted. I take it, however, this is because the article is written for the banking interest rather than the printer.

The most striking feature of the article is that it fails to appreciate what has been done by photo-mechanical means in connection with security printing. Much camouflage, if I may so call it, is generally written about security printing, and a great deal of secrecy is oft woven around with very little foundation indeed. When it comes to preventing fraud or forgery there is hardly anything that can be engraved or printed which can be said to give in the true sense "security" from the expert craftsman forger. It would be very difficult to find anything that has been either engraved or printed by any press which could not be very closely copied by the expert forger who knows his job.

Your writer refers to the necessity of engaging young men for the vignette engraving of stamps. This is surprising to me, because it is now very well known that by purely photo-mechanical methods most excellent reproductions of such subjects, if correctly drawn, can be made photo-mechanically, and I will go so far as to say with as exact fidelity as any well hand-engraved vignette portrait produced by direct engraving. If the original has been drawn correctly, just as good a result can be produced photo-mechanically from such an original as can be produced from any of the more expensive systems in vogue; and I challenge anything that can be done either by the Mint authorities in England or any other expert engraving stamp producing house. That is to say, I will produce by means of photo mechanics from a suitable negative as good and as clear impressions in duplicate as can be engraved by hand, always providing that the original be prepared correctly and of a suitable nature for such reproduction. In stamp plate production the British authorities are satisfied with the work as printed from photo-mechanical plates. Why, then, use plates costing ten times as much?

There is no need, either, for any one nowadays to weave secrecy around stamp production, for excellent stamps can be produced now by photo mechanical means either typographically or intaglio, and all, too, of the most uniform quality throughout. Even assuming that there is any slight difference, this bears really no weight either from the point of view of the commercial production of the stamp itself, the protection against forgery or the appreciation of the stamp collector. It is a fact that printers who print this sort of work by some means or other often over-impress the purchasing authorities by stating that their own particular method is secure from counterfeiting. Very much good salesman talk has been put up to secure special contracts for such work on marvellously little justification. The real honest truth is that the multi-negatives made in the Step-and-Repeat machine can now be made so exactly and can be printed and etched out so exactly, that whatever little difference there may be, if any, is of no detriment either from the point of view of security, of quality of result, or of commercial production. The Government authorities in England have, however, insisted lately that the Mint authorities make stamp plates for the printing contractors—plates made by most expensive methods, costing twenty times what the plates would cost if they were produced from negatives or positives made in the Lithotex Step-and-Repeat machine. A question was asked recently in the House of Commons, to which the reply was that it had been the custom and was still the custom of the British authorities to employ such expensive stamp plates from the Mint. I say there is no consideration either of business or security to justify this.

The insistance of the use of these Mint plates means that the photographically produced stamp plate is barred for English stamp

Digitized by Google

plate production, although it has been admitted by the authorities that stamps produced by the Government from Lithotex photo-mechanical plates are quite satisfactory. The Health and Insurance stamps were so produced for the printing establishment at Somerset House. The very least that can be said about these stamps is that if they are not quite so good as die stamps, yet commercially they have fulfilled all that is required. Any slight difference is negligible in respect of the possiblity of counterfeiting.

I notice a reference is made in the article to the American Bank Note Company. I am just informed that this company have installed their third Step-and-Repeat negative-making machine, that is the "Lithotex" Step-and-Repeat machine as sold in America, controlled by the Corporation in New York. It is very evident, therefore, that the American Bank Note Company have found very good use for photo-mechanical practice in their great establishment.

The review on printing of paper money and security printing also falls rather short in regard to the most interesting development in photo-mechanics in connection with cheque printing as done in America. In Rochester, U.S.A., a very large number of hands are employed on cheque printing purely by offset photo-litho. All plates at Rochester for this cheque printing are prepared for the use of fugitive inks or otherwise, and all from printing surfaces made in the "Lithotex" Step-and-Repeat machine, so that the plates produced in this great establishment producing cheque printing in America are all of photo-mechanical production—that is, not hand-engraved at all.

Your contributor hardly refers to the making of photo-mechanical plates either for cheque printing, stamp printing or paper money printing, and one rather wonders at this oversight in a paper covering such a field, and, as before said, one can only come to the conclusion that the information was published for the banking public and not the printer.

Some of the latest Colonial Governments are now using the Step-and-Repeat machine to make photo mechanical multi-negatives not only for stamps, but also for paper money. Amongst the very latest to instal this particular plant is the Egyptian Government. Then again, certain European interests are now installing the Step-and-Repeat machine for stamp and paper money printing, so that if in Great Britain the photo-mechanical production of stamps and paper money has not been utilised as it should be, there is more appreciation abroad. In Germany for quite a long time the greater portion of stamp plates have been prepared not from expensive photo-engraved dies, but by photo-mechanical means. German stamps, it is true, are not particularly good; however, this is not the fault of the process, but rather of the over-cheap printing process employed, which the Germans nevertheless consider good enough, in a commercial sense, for their issues.

With regard to the present issue of 20s. and 10s. notes, as printed by Messrs. Waterlows at Watford, I have many times said that I am not in any way responsible for the design or anything connected with these notes, my own process as used having been handed over to Waterlows by a third party, who purchased the process from me. Yet, not only was it my process that enabled Messrs. Waterlows to print the present Treasury issue in its present form, but it was also the specimens I had issued which attracted the attention of the authorities and enthused them, so, while I have had nothing directly to do with this paper money production, I am indirectly associated with this work. The process, however, has not been used to its best advantage. A distinct protective design in photogravure might have been used to much greater advantage, one really difficult to forge. As it is, the design really is the easiest prey for the forger, nor does the process itself as utilised afford protection, except in a very minor way.

There is a serious aspect of this Treasury note printing—for I say the authorities have made no effective attempts to find who the forgers of Treasury notes may be; for no effective technical enquiry has, in my estimation, ever been attempted. There are only a very few businesses in England that supply or make a practice of supplying appliances which the forger would have necessarily to be in possession of. Process cameras and apparatus are mainly supplied in Great Britain by a group of four businesses, and, so far as I can gather, the Government has never made any inquiry from any of these concerns, excepting in a very minor manner, as to who has purchased cameras or process apparatus which the skilled forger would necessarily require.

Is it not surprising that no systematised attempt has ever been made from the technical aspect to trace Treasury note forgers? All that has been done, so far as I am aware, is that, when a forgery takes place, the Treasury submit it to the printer, who submits it to his assistants, who send in a report of what may or may not be the process employed, and that finishes the "expert" investigation. Scotland Yard then takes up the matter from the police aspect. This is not an intelligent way of secret service.

During the last six years not a single person has inquired of me as to who might be the likely forgers or who were likely to be in possession of apparatus and this notwithstanding the long list of craftsmen out of work, and which is almost every day in consideration. No one has ever inquired of me regarding the sale of cameras and process plant to likely forger craftsmen, and I understand the position is the same with other houses supplying similar goods. Just recently a considerable haul has taken place in England of apparatus consisting of photographic cameras and other traceable plant. There is hardly one item of plant that I might not have supplied, but up to the moment of writing, no one has thought well to make any inquiries of our business, although we ought surely to be expected to know something of such apparatus and something possibly of the workers who were using these particular tools. It may be other process houses have had inquiries. I can only repeat that during the last six years or so, no single direct inquiry from any of the Treasury authorities or persons responsible for printing Treasury notes has reached me on this matter, although I have had, indirectly, forged examples of Treasury notes submitted to me on one or two occasions.

The Treasury note as at present printed is really one of the easiest things imaginable to counterfeit. There is certainly a certain amount of protection about it, but this does not consist in the design employed. As before said, my own particular process of machine intaglio could be put to a much more protective use if a suitable design had been presented and other important features had been employed, but these points have been entirely overlooked by the authorities whose decisions are final upon these matters.

I trust you will pardon me for such a lengthy letter, my only excuse is that it may be of some interest to the craft.

FREDERIC T. CORKETT.

Pictorial Machinery Limited,
7, Farringdon-road, E.C.1.

Administrative County of London.

THE London County Council will require as from 1st September, 1925, at the London School of Printing and Kindred Trades, Stamford Street, S.E.1, the undermentioned whole-time instructors. Candidates must have served an apprenticeship in their respective branches of the printing craft, and, preferably, should have held executive positions. Experience in modern methods of production and ability to give a systematised course of instruction in theory and and practice are essential.

1. LITHOGRAPHIC INSTRUCTOR—Candidates must have served an apprenticeship as lithographic printers and have had an all-round experience in transferring, proving and machining, with a knowledge of plates, stones and photographic printing down to plate. Practical experience in offset and colour printing and a knowledge of chemistry as applied to the craft essential.

2. STEREOTYPING AND ELECTROTYPING INSTRUCTOR—Candidates must have a wide experience as stereotypers and electrotypers and a knowledge of chemistry and electrolysis as applied to the work of an electrotyper.

3. LETTERPRESS MACHINE INSTRUCTOR—Candidates must have a knowledge of all classes of work, including book, half-tone colour printing and proving; and also of machines of various types, including automatic feeders. They must be able to give instruction in the theory and practice of the work of a letterpress printer, including press work, platen and cylinder machines.

Salary in accordance with a scale to be formulated by the Council in the light of the new "Burnham" award. The scale for instructors has hitherto been £300 rising by annual increments to £425, subject to an abatement of 5 per cent. Commencing salary according to experience.

Preference given to those who served or attempted to serve with H. M. Forces. Apply to Education Officer (T.I.A.) the County Hall, Westminster Bridge, S.E.1, (stamped addressed foolscap envelope necessary) for form to be returned by 6th July, 1925. Canvassing disqualifies.

MONTAGU H. COX,
Clerk of the London County Council.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	**3/0**
Three Insertions	**6/0**

***For every line exceeding three lines* 6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	**1/6**
Three Insertions	**3/0**

***For every line exceeding three lines* 6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Per line	**1/0**

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58 Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Telephone 2439 Holborn.

Situations Vacant.

LITHO SCRIPT WRITER; permanent if suitable.—Apply, sending specimens (which will be returned), Danl. Cunningham and Co., 13-14, Walbrook, E.C.4. 14644

Situations Wanted.

BOY to APPRENTICESHIP for five years; Printing preferred; small premium offered.—C., 26, Khartoum-road, Ilford, Essex. 14633

MINDER (young) seeks change; Two-Revs., Wharfes, Platens.—F. G., 41, Norman-road, Tunbridge Wells. 14643

PLATEN MINDER, all-round, 10 years' experience; disengaged.—L. Daniels, 163, Sellincourt-road, Tooting, S.W.17. 14636

Machinery for Sale.

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Caxton Home, Limpsfield.

Saturday, June 20th, was kept as "Remembrance Day" at the above Printing Trade Institution, it being the fourth anniversary of the dedication of the Printing Trades' War Memorial. Over 100 friends and supporters of the Home were present. After a few appropriate remarks, the president (Mr. C. J. Drummond, J.P.), placed a commemorative wreath at the foot of the Roll of Honour, and Mr. C. W. Bowerman added his tribute to the memory of the men in the craft whose names were inscribed on the Memorial. The simple function was brought to a close by a one-minute silence. Tea was provided in the dining hall for the company, and opportunity was taken by many friends to inspect the Home and grounds.

Threatened Stoppage of London Newspapers.

REFERENCE is made in another column to the differences between the London daily newspaper proprietors and trade union members in their employ—differences which have led to threats of a stoppage of work. There is every reason to believe that there will be no stoppage of the London daily newspapers, but it is somewhat significant that this has been actually contemplated. If any serious difficulty did arise, and the London daily newspapers were to suspend publication, this would certainly have far-reaching consequences, and although there is no connection at all with the employers' organisations representing the provincial newspapers or the general printing trade, there are many firms publishing daily newspapers who are also connected with other branches, so that these other sections of the industry might easily become involved. The Joint Industrial Council of the Printing and Allied Trades includes the general printers of London and the provinces, also the newspaper proprietors of the provinces; but, so far, the London daily newspapers have stood aloof from this Council. Considering the valuable work of conciliation which this Council has to its credit, the London newspaper proprietors will no doubt before long consider the desirability of taking part in its activities. At any rate, it is to be hoped that at the present juncture wise counsels will prevail, and that the Press of this country will suffer no interruption at a time when home and foreign affairs would thereby be put in serious jeopardy.

War Orphans' Flag Day.

THE arrangements made by the Joint Industrial Council for this week's Flag Day for the purpose of raising the sum of £6,000 for the Printers' War Orphan Fund are being well supported, and all printing offices throughout London and the provinces have been supplied with collecting sheets or flags. There are still 900 orphans being supported, and it is worthy of notice that quite one-third of these are in the provinces. London printers and their employees have always supported the Printers' Pension Corporation in a generous fashion, but the provinces have not realised to the same extent the valuable work the Corporation is doing. It should be interesting for some of these provincial printers to know that in Manchester 17 orphans are being supported, £1,528 having been expended in their behalf up to the end of this month; in Liverpool there are ten, which have cost up to date £498; in Newcastle ten, costing £634; and in Hertfordshire and Bucks there are 20 children, for whom £1,747 has been expended. These are given as typical figures to show the necessity for generous contributions from the provinces. It is to be hoped that the whole of the printing industry will strive to "go one better" than last year's Flag Day effort, in giving practical support to this very necessary fund.

Paper Salesmanship.

THE great need of the paper trade at the moment appears to be in the direction of pressing sales. Business generally has been in a state of depression for a considerable time, and many minds have been engaged on the task of unearthing the causes. There are those who think that something might be done to increase the consumption of paper by a scheme of collective advertising. It seems quite obvious that the public generally have not overcome the niggardliness in the use of paper which was induced by the scarcity of that commodity which existed during the war. They have not returned to that free use of the product which had become a custom before 1914.

Personal.

ALDERMAN SIR GEORGE WYATT TRUSCOTT will act as locum tenens for the Lord Mayor of London during the latter's State visit to France from June 25th to June 29th.

SIR T. VANSITTART and Miss Bowater and Sir Rowland Blades, M.P., on Friday night attended the banquet given by the Lord Mayor to His Majesty's judges at the Mansion House.

LORD BURNHAM, Sir William Berry, Sir Charles W. Starmer, and Sir Charles Hyde have been elected patrons of the Regent Advertising Club, London.

RE-ELECTED vice-presidents of the City of London branch of the Royal Society of St. George include Viscount Burnham, C.H., Alderman Sir J. Baddeley, and Alderman Sir William Waterlow.

MR. W. WATMOUGH, director and general manager of Messrs. Watmough, Ltd., printers and newspaper publishers, Bradford, has been married at Linton Parish Church, Yorkshire, to Miss Elsie DIXON, of Grassington.

MR. M. B. GARDNER, secretary of the Argus Printing and Publishing Co., South Africa, left on May 12th by the Garth Castle on a visit to England.

MR. K. CUNNINGHAM, of the firm of Messrs. J. and G. Innes, Ltd., Cupar, Fife, has been presented by the case-room staff with a brush set and a pocket book on leaving for Australia.

MR. ALBERT WHETSTONE, the acting editor of the *Nuneaton Observer*, has been presented by the proprietors with a gold watch on leaving to join the editorial staff of the *Midland Daily Telegraph*.

MR. S. W. MASON, of the Leeds staff of the *Daily Chronicle*, was the winner of the medal round at the opening meeting of the Golf Circle of the Leeds Press Club.

London Newspapers and the Unions.

Threats of a Stoppage.

Difficulties which have been experienced in the management of certain London newspapers have lately taken on a more serious aspect, and have, during the last week, been given much general publicity, the suggestion being made that there is risk of a general stoppage of work. By the time of writing, however, a number of special meetings of the Council of the Newspaper Proprietors' Association have been held to consider the situation; representations have also, we understand, been made to the unions concerned, and several conferences have been held. We have every hope, as is indicated in another column, that a peaceful settlement of the disputes will shortly be reached.

Mr. A. E. Holmes, secretary of the Printing and Kindred Trades' Federation, writes to us as follows:—"I am surprised that the Newspaper Proprietors' Association has stated through a trade journal the difficulties they have to contend with. It would have been quite as easy to have stated their position directly through the daily Press instead of quoting it in the roundabout manner they have done. I have carefully read through the statements which have been made and I found that in no instance is the union to be blamed for what has taken place. On the contrary, in every instance where the men have shown a tendency to act without reference to the union official efforts have been directed towards inducing them to abide by the conditions of their agreements and to act in a constitutional manner.

"You will notice that it is reported that when the Newspaper Proprietors' Association called together the officials of all the trade unions with whom they had dealings, they invited the officials to state that they approved of chapel action involving unconstitutional stoppages, but none of the reports gave the reply of the trade union officials. To be quite candid, I consider that all our unions are sufficiently strong, and more than sufficiently honourable, to act in a constitutional manner.

"The point I wish to make with the Newspaper Proprietors' Association is that, when they invited the unions to attend a conference, they invited them individually and ignored the machinery set up by the unions themselves in the name of the Federation through which such conferences should have been summoned. The counterpart of such action can best be shown by the unions demanding individual interviews with the newspaper proprietors instead of going to their Association.

"It nevertheless has to be recognised that, were a real difficulty to arise, the machinery of the unions would be put into motion. At a time of crisis—which after all is the most unsatisfactory occasion—the Newspaper Proprietors' Association would be compelled to recognise that the unions had in existence an organisation through which they expressed their collective opinions.

"I have made inquiries into the existing troubles, and I am also aware of the fact that the Newspaper Proprietors' Association consulted the Labour Department of the Board of Trade, but I am fully convinced that the unions have taken measures to see that the chapels act constitutionally. If the chapels fail to do so, it does not follow that the union is to blame.

"I would like to mention that, months ago, Mr. A. E. Goodwin and myself, as joint secretaries of the Joint Industrial Council, took the opportunity of interviewing certain prominent members of the Newspaper Proprietors' Association with a view to inducing them to become members of the Council. Their reason for refusing to do so, I understand, has been partly because they feel nervous of being brought into any national dispute that may arise. I would like to assure them that questions relating to London would not necessarily be made national ones. We are particularly anxious to extend to the London newspaper proprietors the same machinery in the shape of the J.I.C. as has proved of such beneficial influence in the affairs of the printing industry during the past six years. I am positive in my own mind that if the Newspaper Proprietors' Association took advantage of the good offices of the J.I.C., this would have the effect of creating a steadying influence upon those who at the moment were disinclined to obey the administrative authority of their unions.

"In conclusion, I am sorry that in the reports appearing in the Press no credit is given to the officials of the unions for their genuine efforts to induce the chapels affected to conform to the constitutional method of settling their difficulties."

N. Wales Master Printers' Alliance.

Annual Meeting.

The sixth annual general meeting of the North Wales Master Printers' Alliance was held on Monday of last week at Carnarvon. For the first time in the history of the Alliance ladies were invited to the gathering, and in the afternoon, by invitation of the Carnarvon Association, a charabanc excursion took place through Snowdonia. Tea was taken at Bettws y-coed, when opportunity was found to express thanks to Messrs. E. Lloyd Williams, A. Vaughan Evans, W. G. Williams and other members of the Carnarvon Association.

Mr. W. Powlson, president of the Alliance, occupied the chair at the annual meeting in the morning at the Royal Hotel, Carnarvon.

A message was read from the president of the Federation, Mr. W. Howard Hazell, who wrote: "Much work has been accomplished in past years, but much remains to be done. Each year will bring new difficulties and new problems, which we can face with equanimity if we have a strong Federation, and willing workers who believe that by whole-hearted co-operation, many improvements can be introduced in the industry."

A telegram was also received from the secretary of the Federation, Mr. A. E. Goodwin, who was unfortunately unable to be present.

In proposing the adoption of the annual report, the chairman said that the scheme of reorganisation of the Alliance had been brought practically to a conclusion by the appointment of Mr. Herbert Tomkinson as hon. secretary, and there had been a fruitful result from the arduous work he had done during recent months. An increased interest in costing had been aroused as a result of the visit of Mr. A. D. Hull, one of the Federation cost accountants, and the relationship between the employers and the workers had been greatly strengthened by the three district committees of the J.I.C. that had been formed in the area and by the bowling match arranged by the masters and men of Wrexham that had become an annual event.

The treasurer's report showed an improved financial position.

Mr. A. Smith (Cefn) was elected president for the ensuing year, and Mr. R. LL. Davies (Llandudno) was elected vice-president, and Mr. David Rowlands (Welshpool) was re-elected treasurer.

A vote of thanks to the retiring officers and committees was voiced by Mr. A. Moy (Llandudno) and Mr. E. Lloyd Williams (Carnarvon), and special reference was made to the self sacrificing labours of Mr. W. Powlson during the two years of his presidency.

After the appointment of representatives on the Federation committees, the meeting listened with interest to an address from Mr. H. A. Bethell, chairman of the Organisation Committee of the Joint Industrial Council, who spoke of the invaluable service rendered by the Conciliation Committee in maintaining peace in the industry, and referred to a variety of other aspects of the Federation and the J.I.C.

Mr. L. J. Cumner (Federation of Master Printers) spoke of the effect that the Rating and Valuation Bill would have in North Wales, and also dealt with the Pensions Bill, the standardisation of paper, the apprenticeship problem and other matters that have been engaging the attention of the Federation.

Luncheon followed, by invitation of the vice-presidents of the Alliance. A welcome to the visitors was extended by Mr. E. Lloyd Williams (chairman, Carnarvon Association) and Mr. Alfred Smith (Cefn), president-elect. Mr. H. A. Bethell and Mr. A. E. Baker (secretary, South Wales Master Printers' Alliance) responded. "The Printing Trade in North Wales" was proposed by Mr. L. J. Cumner, and Mr. R. LL. Davies, vice-president-elect, responded, and the health of the chairman was proposed by Mr. Rowland Thomas (Wrexham), to which Mr. W. Powlson replied.

New District Committees of the J.I.C.

Considerable success is attending the efforts of the joint committee appointed by the Home Counties Alliance of Master Printers and the Home Counties Group of the T.A. to promote the formation of District Committees of the Joint Industrial Council in their area. In Portsmouth, Slough, and Aylesbury, District Committees are now at work, and an inaugural meeting was held at Brighton on Thursday last.

The Brighton meeting was presided over by Mr. Jennings, Registrar of Brighton, who commended the work of the J.I.C. as an instrument for securing industrial peace. Mr. A. E. Holmes, in an eloquent address, reviewed the work of the Council for the past five years, and intimated his belief that strikes and lock-outs ought to be regarded as obsolete methods. He referred to the work of the Health Committee in particular, and asked Brighton printers to support the Apprenticeship Committee in securing an improvement in the technical training of young craftsmen. Mr. Frank Murrell spoke of the work of the District Committees in South Wales, and, from the point of view of a member of the Conciliation Committee, told of his experience on the National Council, particularly in connection with the settling of the recent dispute in the binding industry of London. Questions were invited, and one inquirer asked if the movement was not intended to divert the trade unions from their proper duties, and if the intervention of a J.I.C. in the recent dispute had not been against the interests of the workers. Mr. Holmes and Mr. A. E. Goodwin both replied, pointing out that one of the objects of the J.I.C. was to promote better organisation on both sides, and they gave several instances of the improvement that had taken place in the organisation both of the trade unions and of the employers' associations in recent years. It was unanimously decided to form a District Committee, and the officials of the Committee were duly elected.

A meeting is arranged for Saturday next at Newport, Isle of Wight, when the local Member of Parliament, Captain McDonald, will preside, and Messrs. Goodwin and Holmes will explain the objects of the Council, supported by Mr. H. H. Potts, president of the Home Counties Alliance.

Trade Union Matters.

T.A. BOWLS.—In the final for the Dove Bowls Shield, played towards the close of the Typographical Association's recent meetings at Lowestoft, the finalists were:—Executive Council No. 1: Messrs. F. O. Roberts, M.P., W. H. Evans, J. W. Lowe, and H. T. Whitley. Midland Group No. 2: Messrs. G. Wooldridge, F. Hughes, D. O. Bollard, and C. White. A keen game followed, and the Executive Council eventually succeeded in winning 15—11. The Mayoress of Lowestoft presented the shield and silver spoons to the winning team.

THE National Union of Journalists announces that there are twelve entrants for the Union Exhibition in Journalism tenable at the University of London. The Union is paying the entrance fees and expenses of all these candidates.

"NEWCASTLE CHRONICLE" AND UNION CONDITIONS.—At a recent meeting of the Executive Council of the Typographical Association the president (Mr. J. D. French) reported on his visit to Newcastle to arrange for the re-establishment of *Newcastle Chronicle* publications under union conditions consequent upon the transfer of proprietorship to the Allied Newspapers. The firm at the time had about 30 trainees, but most of these would be displaced. There were also about 28 apprentices, and arrangements were being made to bring the office into line with T.A. conditions in this respect, and also to dispense with the services of female labour in the composing-room.

AT a recent meeting of the Executive Council of the Typographical Association, correspondence was submitted in regard to the introduction of a youth who was the son of a master printer into an office at Southport for two years with a view to his gaining experience in the various departments of the trade. As the firm had already the full number of apprentices allowed under the rules, the Council have decided that the admission of the youth cannot be agreed to.

The Bookbinder

Notes and News.

Demarcation of Labour.

Instances accumulate to demonstrate the injustice which prevails in the bookbinding trade concerning demarcation of labour. Certain firms are privileged to employ girls on work for which other firms must employ men. It is scarcely possible to believe that such anomalies exist in an industry otherwise well organised, although such is actually the case. To escape the incidence of officialdom and trade unionism a number of houses have preferred to develop under non-union conditions, and it is a commentary on the merits of the case that such houses have mainly succeeded to a marked extent. This is no argument in favour of non-unionism, although when such anomalies are countenanced as those which are known to every member of the bookbinding trade, there are strong reasons which force aspiring houses to think in that direction. Strangely enough, it is difficult to secure any really helpful consideration from official quarters. Apparently, not only is an understanding on the demarcation of female labour a problem beyond the power of the present leaders, but even common fairness and equal opportunity is denied to members of the trade. The time will come when this issue will be fought out in the open unless sometning like a genuine endeavour is made to arrange a schedule of operations and conditions of their performance.

Leather versus Cloth.

Leather prices remain very steady and are practically unaltered from those which have ruled for months past. According to makers' reports, trade is rather quiet, and particularly so on the side which deals with bookbinding leathers. As a matter of fact, quite apart from the prevailing slackness in the bookbinding trade there has for long enough been a tendency to find other materials than leather for all but the best work. True enough, there is nothing like leather when it comes to boots and shoes, but for books there are a good many materials on the market that are so akin to leather that only the expert can decide identity with anything like confidence. In looks, feel and wearing capacity there is little or nothing to choose between the highest grade leather cloths and real leather. Often enough, from the viewpoint of economy and ease in working, the leather cloth has it. Small wonder, then, that for ordinary purposes the bookbinder is turning more and more in the direction of leather substitutes.

Quarter Binding.

For quarter bound work only a comparatively small amount of skiver and pastegrain is used nowadays. Twenty years ago there was scarcely any other choice than cloth or skiver. Now there are dozens of types of quarter binding material to select from, all of them cheaper and in many ways superior to leather in the form of skivers. Incidentally the march of time has wrought other changes in connection with quarter binding. Development in office methods and systems has worked to the detriment of the bookbinder, and instead of quarter bound books the demand has in large part turned over to loose or padded forms. The manifold duplicate book trade which formed a considerable part of the business done by the commercial bookbinder twenty years ago has diminished to a fraction since the introduction of the typewriter and modern office filing systems. Loose-leaf binding is in the hands of specialists, quarter bound scholastic work is distinctly the province of the mass production specialist in educational work, and very little quarter binding of any sort is left for the ordinary bookbinder.

Where Leather Rules.

Referring back to leather substitutes, there are certain directions in which the writer would hesitate to supplant the genuine material. First in regard to full bound ledger work of any importance, and secondly where literary binding of other than ephemeral interest is concerned. A good, well bound book for the library or bookshelf of the book-lover and book collector should be clothed in real leather. Then we have a genuine production with none of the limitations imposed by commercial considerations. There is a deal of sentiment and tradition in books that are to be read, and it extends to the clothing of the books, but only the material interest of economy enters into the specification of books for commercial and clerical usage.

Apprenticeship in the Bindery.

At the June meeting of the Printing, Bookbinding, and Kindred Trades Overseers' Association Mr. B. J. Sansom, bookbinding instructor at the London School of Printing, lectured on some of the difficulties connected with apprenticeship in the bindery. The lecture was based on a short story entitled "Probation," by T. Thompson, that recently appeared in the *Manchester Guardian*. The story (in part) is here reproduced, to which are appended some of the observations made by Mr. Sansom.

Probation.

"On the whole, the newly-apprenticed Juddy took to Mr. Ponder, the foreman bookbinder, though he quarrelled silently with his rather aggressive manners. Still, with reservations, Juddy was happy enough in his company. There was no finer craftsman than the old man, and the lad watched him carefully. It was all that he was allowed to do in the higher reaches of the craft. Mr. Ponder was in no hurry to lay aside his mantle. Age was threatening, and skill his only shield. It was not likely that he should cast it too willingly at the feet of a possible usurper. Juddy was allowed his fling amongst the bread-and-butter jobs. But the work of miracles remained in the masterly hands of Mr. Ponder.

"Juddy did not object. There was not too much work in the shop, and he would rather read a book than bind it. In an inspired hour the Conservative Club sent a tattered portion of its library for restoration. It was astonishing, after that, how often the paring knife fell into the waste-paper 'tub,' across which lay the 'backing' and cutting presses, under boards serving as benches. It was a rare hiding place, at least three feet deep, and running the whole length of the room. If Mr. Ponder shouted (with trimmings) for Juddy, his tousled head would pop up out of the 'tub' and a pair of blinking eyes peer across the wooden shelf which held the stove and the gluepot, just as though he had been dragged out of a dream; as indeed he had. His protracted anxiety about the chronic disappearings of the lost knife coincided with an increasing knowledge of the English classics. He read for the first joyous time 'The Cloister and the Hearth,' and he read it 'kenched' down in a cramped corner of the dingy 'tub.' There were few books in that batch, which did not find their way to that 'tub,' and the few that missed could not blame Juddy. Mr. Ponder had occasional acrid moments of vigilance, though more often he winked at Juddy's literary gourmandising. There was not much to do and plenty of time to do it. All things considered it was better that he should do it himself.

"This, while vastly entertaining to Juddy, did not make for efficiency. He knew, but could not do, and what is more to the point, he did not want to do. Inactivity made of him a lotus eater. The library job would have tried the patience of any other customer. The Conservative Club considerately forgot all about it until Juddy had got through the Hardys. And then he did not mind. There was nothing left, he imagined, that could 'cut' their mark.

"Some jobs of course he liked. He could have messed about all day with the marbling trough, but he objected to sewing books. It was a girl's job and he got it all. The 'boss' had tried various young ladies at different times, but as fast as he got them the printers married them. So he gave it up in disgust. 'It's no good,' he said, 'keeping women where there's printers.' That was why Juddy had to do the sewing. Mr. Ponder rather believed in it. No man, he asserted, ought to be trusted to bind a book who could not sew one. Indeed the sewing was the binding. All the rest was flummery. There were books, he was willing to admit, that were not worth the trouble of good hand sewing, such as Liberationist pamphlets and Radical treatises. But these, he hoped, would not come his way.

"Once a book had been well sewn it would be wicked to scamp its gowning. Mr. Ponder insisted upon reverence, and looked upon a volume as a precious casket, holding he knew not what. In his last years of apprenticeship Juddy picked up amazingly, though he was not allowed to tackle the 'finishing.' It was a gorgeous day when he was given a set of Borrow and a lovely skin of Niger morocco, whose very feel suggested a pot of ale and a radiant midnight fire."

In reviewing this story, Mr. Sansom remarked that the author of it seemed to have a fair knowledge of the subject, although the practices he depicted would not answer under present-day conditions of production.

As to the reference to aggression, the use of agressive methods was not the way to get the best results from a boy. In these days of scientific teaching a good teacher, if he understood his business, would always adopt a friendly and sympathetic attitude towards a lad, taking care, however, not to become familiar. His own experience was that the right word at the correct time, would often smooth the way to a perfect understanding between the pupil and the teacher.

One could well understand a craftsman advancing in years not being in a hurry to give away his life's experience, especially if he knew that he was likely to be superseded by a younger man with youth on his side, who would certainly be a quicker producer. In this age of keen competition and output the present-day departmental manager had not the time, however much he might wish it, to pay detailed attention to the apprentice. Another point to take into consideration was the amount of spoilage that occurred during a lad's apprenticeship if the lad was to receive thorough training. If a number of apprentices were employed this required careful reflection. In gold-finishing, for instance, before a lad became efficient, he had to waste a tremen-

Digitized by Google

dous amount of gold leaf, which was a substantial item of expense.

Mr. Sansom said it seemed to him that the writer of the article was acquainted with the "good old days" when speed and production were not the essentials they became after the introduction of limited liability companies. He was very glad to see that the writer was in the boy's favour in respect of the reading of classical literature. The modern lad generally had his pockets bulging with books of the Jack Sheppard and Dick Turpin order. Apparently through inactivity the boy was becoming lazy and artful, yet he consoled himself by reading instead of learning his business. Usually inactivity to the ambitious boy made him dissatisfied; his enthusiasm was sapped, and, what was worse, he acquired habits, some of them vicious, which would cling to him through life.

It had often been asserted that the binder was the "Cinderella" of the printing and kindred trades. Jobs which go wrong in other departments are humoured and made to look presentable by the binder. This story suggested an additional obligation of the printer to the binder. At the period spoken of the bindery was nothing more than a matrimonial office for the printing department, and if young ladies happened to be sewers it didn't matter whether it was "Cinderella" or the ugly sisters, they were married to the printers. Thus, those engaged in the printing departments owed the binder a debt of gratitude.

As to the assertion that no man should be allowed to bind a book if he couldn't sew one, that might have been tolerated in Mr. Ponder's day, but it would not answer at the present time. Yet, without doubt, there were times when the binder found it necessary to understand book-sewing, whether by hand or machine. The extant invoices of celebrated binders of olden days showed that books were sewn by the actual binder.

"The Temple of Art," Wembley.

The accompanying illustration gives a glimpse of "The Temple of Art," the exhibit of Messrs. Raphael Tuck and Sons at the Palace of Industry, Wembley, the photograph

having been taken on the occasion of the first visit of the King and Queen to the new British Empire Exhibition.

Their Majesties were received by Sir Adolph Tuck, Mr. Gustave Tuck and Mr. Desmond Tuck, three of the directors of the company, and made a minute inspection of the various art publications of the company housed in their handsome "Temple" which is so prominent a feature of the Exhibition. We understand that on the occasion of this visit specimens of various art departments were ordered to be sent to Buckingham Palace, and Their Majesties, on leaving, cordially shook hands with the directors and expressed their gratification with all they had seen.

AT the further sitting of the Royal Commission on Awards to Inventors, held on Monday, at the Law Courts, when claims against the Admiralty in respect of inventions concerning naval gunfire control were heard, one of the claimants was Mr. A. H. Pollen, a director of Linotype and Machinery Limited. In 1901 Mr. Pollen turned his attention to the question of naval gunfire, and produced an invention said to be of the utmost importance in gunfire control. The hearing of the claim was adjourned.

Training Bindery Executives.

Winterbottom Scholarship to be Put in Operation.

At a meeting of the executive committee of the Winterbottom Scholarship held at the London School of Printing on Friday it was decided to go forward at once with the Scholarship recently inaugurated by the Winterbottom Book Cloth Co., Ltd. It was further decided that the following particulars regarding the scheme be distributed throughout the country:—

"A Scholarship for open competition to the value of £100 has been offered by the Winterbottom Book Cloth Co., to enable men employed in the bookbinding trade to attend a whole-time course of instruction (September 12th, 1925, to July 31st, 1926) at the London School of Printing and Kindred Trades, with the object of equipping themselves for positions of an executive nature.

"Candidates must be of British nationality, and either have completed or be in the last year of their apprenticeship as bookbinders.

"The Scholarship will be awarded on the result of an examination to be conducted by representatives of the binding trades.

"Application forms can be obtained from the Principal of the London School of Printing and Kindred Trades, 61, Stamford-street, S.E.1, and must be returned not later than July 18th, 1925."

We understand that the committee also decided to invite the co-operation of the various district committees of the Joint Industrial Council throughout the country in receiving the examination papers of candidates.

The Winterbottom Scholarship Committee, it may be mentioned, comprises the following gentlemen:—Major Robert Leighton (Leighton, Son and Hodge), Mr. George Bell (Winterbottom Book Cloth Co., Ltd.), Mr. J. A. Esler (Printing, Bookbinding and Kindred Trades Overseers' Association), Mr. J. R. Riddell (London School of Printing), and Mr. S. Stubbings (secretary, London Branch of the Bookbinders' Union).

Faraday and Bookbinding.

In the course of an article in the London *Star* last week on Michael Faraday, Wilfred L. Randell says of the famous scientist that as an errand-boy to a bookbinder of Bayswater, Faraday came across many volumes which interested his inquiring mind, and a friend has placed it on record that even in his apprenticeship he had become "a self-taught chemist of no slender pretensions." "He kept notebooks, in which he entered the names of articles that interested him; I have seen these books. They are most beautifully written, and are also illustrated by very good pen-and-ink sketches. He made as many experiments in chemistry as a poor boy on a weekly pocket-money wage could afford; and obviously such a youngster could not develop into a bookbinder's journeyman—which was probably the career planned for him by his father."

THE London School of Printing is holding an exhibition of students' work on the School premises, 61, Stamford-street, S.E. The exhibition opened on Monday, and remains open until July 3rd; hours, 9 a.m. to 5 p.m.—with an extension to 8 p.m. on the evening of Wednesday, June 24th.

BRITISH ADVERTISING CONVENTION.—There will be a strong representation from the Federation of Master Printers at the British Advertising Convention at Harrogate next month, and the special printing session on Monday, July 6th, is likely to attract a large audience. Mr. Alfred Langley (London) will preside and read a short paper on "Letterpress Posters for all Advertisers"; Mr. Geo. W. Jones (London) will speak on "Form and Colour in Advertising"; Mr. David Greenhill (Watford), on "Photogravure and Newer Printing Processes to Aid the Advertiser"; Mr. W. Sessions (York), on "Dressing the Goods, Better Labels, etc."; Mr. G. F. Storey (Leeds), on "How to Improve the General Display of Goods—Cartons, Showcards, etc."; Mr. N. Hills Patterson (Sunderland), on "Calendars as an Advertising Medium." Printers desiring to attend this special session are requested to communicate to the secretary of the Federation of Master Printers.

Bookbinding in Miniature.

A remarkable exhibit of miniature bookbinding was on show recently at Richmond, Virginia, U.S.A. It was a collection of no less than 230 books bound in almost every known style of binding and measuring only 1 inch by ¾ inch. The books are stated to have been designed and bound by Mr. Albert N. Thistle; edge gilding by Mr. Charles Peiffer, establishment of Mr. L. H. Jenkins, book manufacturer, of Richmond, Va.

The books include examples of binding with morocco, including three rough-edge, gilt-top books, bound in red, white and blue; full bound, covered in set heads; plain back and four bands; law binding; photo album; combination prayer and hymnal; Oxford Bible; flexible book, folding ledger, note book and diary; padded books, one with four bands, and one plain book, set heads; books with edges of red under gold, plain gold, rough edge and gilt top, cut edge gilt top, marbled edge, sprinkled edge and red edge; and many other styles. No two covers cut from the same kind of leather.

The idea first thought of was to bind the small books in a piece of every kind of skin that was obtainable, including human skin, but after starting it was found impossible to secure many of the skins that were first thought of. The human skin was secured from a medical college, but the tanning could not be done on account of the superstition of the coloured help in the tannery, and other difficulties that turned up.

For the effective display of these miniature books it was decided to have a cabinet maker make the frame in the form of a book 24 by 36 inches. This frame was bound to represent a book, and was entitled "A Book of Many Books."

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The June meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C. The chair was occupied by Mr. J. Black (vice president), and there was a good muster of the members.

Following the reading of the minutes, a letter was read from Mr. J. R. Riddell asking for representatives of the Association to act as adjudicators in the competitive work done by the electrotyping and stereotyping students attending the London School of Printing.

On the proposition of Mr. W. Bullett, seconded by Mr. H. Filkins, Mr. A. Chadwell (president) and Mr. J. Black were selected for this purpose, the adjudication taking place on the 22nd inst.

The secretary announced that November 14th had been fixed for the date of the Association's annual dinner, for which Messrs. W. M. Forsyth and H. Filkins were appointed stewards.

The secretary also stated that Mr. A. H. Mundey (Fry's Metal Foundry) had promised to give a lecture to the Association on the subject of metals on November 17th.

The chairman emphasised the importance of the two dates, and asked the members to keep them well in mind.

Mr. Black then alluded to the pleasure felt by the members at the recent success secured by their much-respected secretary (Mr. Bullett) at the Eastbourne national bowling tournament. He said they were a comparatively small body, but when one of their number distinguished himself—as Mr. Bullett had done on this occasion—they could not let the event pass without showing their appreciation.

Mr. Bullett briefly returned thanks for the kind remarks offered by the chairman.

The next monthly general meeting of the Association will take place on September 15th

AN organisation to be known as the Bookbinders' Guild came into being recently at an enthusiastic meeting held at the New York Advertising Club. The Guild will have as its membership male superintendents, foremen, bindery and office executives actually engaged as such for a continuous period of not less than one year prior to date of application for membership. The objects shall be the promotion of good fellowship among its members and the development of the educational features of the bookbinding industry.

DIVIDENDS AND REPORTS.

"YORKSHIRE EVENING NEWS." — For year ended April 30th last directors recommend usual dividends on 6 per cent. preference shares, 7½ per cent. A preference shares, 10 per cent. preferred ordinary shares, and final dividend of 7½ per cent. on ordinary shares, making 15 per cent. for year all less tax, and bonus of 2s. (10 per cent.) on each ordinary share, free of tax. Balance forward £7,249. Distribution previous year similar.

NEW COMPANIES.

CROYDON ADVERTISER, LTD. — Capital £40,000, in 39,995 ordinary shares of £1 and 100 "B" shares of 1s.; to adopt an agreement with F. W. Ward, A. E. Ward, F. J. Ward and Emma M. Stiby, and to carry on the business of the *Croydon Advertiser* and general printers formerly carried on by the trustees of the late J. W. Ward at High-street, Croydon. Private company. First directors: A. E Ward, F. W. Ward and Mrs. E. M. Stiby. Registered office: 36, High-street, Croydon.

JAMES HEAP (HANLEY, 1925), LTD.—Capital £20,000, in £1 shares; to acquire the undertaking and all or any of the assets and liabilities of James Heap (Hanley), Ltd. (incorporated in 1913), and to carry on the business of bookbinders, booksellers, stationers, printers, lithographers, typefounders, etc. Private company. First directors: H. E. Moody, A. H. Heath, C. E. Bullock and J. T. Webster. Solicitor: B. Robertson, Newcastle-under-Lyme, Staffs.

W. KNOTT AND SON, LTD.—Capital £3,500, in £1 shares; to acquire the business of printers and publishers now carried on by H. W. Knott and J. W. H. Gunyon, at 30, Brooke-street, E.C., and elsewhere, as "W. Knott." Private company. Directors: H. W. Knott and J. W. H. Gunyon.

CASTLE PRESS, LTD.—Capital £1,000, in £1 shares; to acquire the business of a printer carried on by S. C. Osborn at 40, Fann-street, E.C., and to carry on the same and the business of bookbinders, stationers, publishers, newspaper and magazine proprietors, etc. Private company. First directors: S. C. Osborn, T. A. Hickmore and T. P. Hickmore. Registered office: 40, Fann-street, E.C.1.

VICTOR COMPOSITION CO., LTD.—Capital £100 in £1 shares; to carry on the business of importers, exporters and manufacturers of printers' rollers, roller composition, printing inks, glues, gelatines, dry colours, dyes, etc., and to adopt an agreement with J. Cullan and V. A. Callan. Private company. Subscribers: P. F. Money and L. D. Richmond. Directors: J. Callan and V. A Callan. Solicitors: Buckeridge and Braune, 3-4, Clements-inn, W.C.2.

SIMMONS AND SON, LTD.—Capital £50,000 in £1 shares (20,000 preference and 30,000 ordinary); to acquire the business of a paper merchant, paper bag maker, and printer carried on by F. W. Simmons at 42, St. Paul's-square, and Brook-street, Birmingham, as "Simmons and Son," and to carry on the same and the business of manufacturers of paper of all kinds, and articles made from paper or pulp, boxmakers, printers, stationers, etc. First directors: F. W. Simmons, G. W. Singleton and L. Simmons. Solicitor: A. H. Coley, 63, Temple row, Birmingham.

YOUNGS NEWS AGENCY, LTD. — Capital £250, in £1 shares; newspaper proprietors, distributors, circulators and salesmen, general publishers, etc. Private company. Subscribers: W. J. Young and Mrs. M. E. Young. Registered office: 6, Station Approach, Hayes, Middlesex.

ALPHA TICKET ISSUING MACHINES, LTD.—Capital £5,000, in £1 shares; to acquire any interests in any patents, etc., relating to any inventions for the delivery, issuing or registering of tickets and to carry on the business of ticket and numerical printers, stationers, lithographers, engineers, founders, smiths, machinists, etc. Private company. Subscribers: G. A. Raines and C. H. Mead. Solicitor: E. H. J. Chambers, 22, Silver-street, Hull.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

NEWCASTLE NEWSPAPERS, LTD.—Debenture registered June 3rd, 1925, to secure £500,000, constituting a fixed charge on freehold properties No. 269 and 271, Scotswood-road, 2 and 4, William-street, 46, Westgate-road, Rosemary-lane, and Pudding Chase, 21 and 23, Orchard-street, 1, 3, 4 and 5, Pringles-court, 19, Orchard-street, and Skinns-court, Newcastle-on-Tyne, freehold properties 52, Howard-street, North Shields, 131, 133 and 135, High street, and 1-4, Raglan terrace, Gateshead, land at Cowpen Quay, Northumberland, 42, Essex street, Strand, W.C., and a floating charge on the company's other assets and property, present and future (except uncalled capital and assets and property acquired otherwise than from or in exchange or substitution for assets or property acquired from *Newcastle Chronicle*, Ltd.). Holder: Sir Arthur M. Sutherland, Bt., Thurso House, Newcastle upon-Tyne.

GRAPHIC AND BYSTANDER, LTD.—Particulars of £300,000 debentures authorised June 3rd, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

WILLIAMS, LEA AND CO., LTD. (printers, etc.)—Mortgage and Land Registry Charge on freepremises No. 85, Worship street, and leasehold premises No. 81 and 83, Worship street, Shoreditch, and warehouse in rear thereof, both dated May 9th, 1925, to secure £8,375. Holder: H. Wesley, 85, Worship-street, Finsbury, E.C.

BRASHERS, LTD. (printers, etc.).—Mortgage on freehold hereditaments, workshops and premises in Roumelia-lane, Boscombe, dated May 29th, 1925, to secure all moneys due or to become due from company to Lloyds Bank, Ltd., not exceeding £3,500.

F. J. PARSONS, LTD. (printers, Hastings).—Satisfaction in full on May 25th, 1925, of mortgage dated January 16th, 1913, securing £850.

JOHN E. CLARKE AND CO., LTD. (manufacturing stationers, etc., London).—Mortgage debenture dated May 12th, 1925, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. G. M. Edgelow, Lowther Lodge, Gerrards Crosss.

AT-A-GLANCE CALENDAR CO., LTD.—Mortgage on freehold land and factory at Beechfield-road, Tottenham, with fixtures, etc., dated May 22nd, 1925, to secure all moneys due or to become due from the company to the Midland Bank, Ltd.

D. O. EVANS AND SONS, LTD. (paper bag manufacturers, London).—Debenture dated June 4th, 1925, to secure £4,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: H. Wolf, 50, Bryanston-street, Hyde Park, W.

W. B. BRIDGEWATER AND CO., LTD. (paper and paper bag merchants, etc.).—Mortgage dated June 5th, 1925, to secure £2,000 charged on warehouse No. 3, Wakefield street, Liverpool. Holder: S. W. Bridgewater, 3, Wakefield-street, Liverpool.

DOREILL ADVERTISING CO., LTD. (photographers, advertising agents, etc., London).—Debenture dated May 20th, 1925, to secure £1,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Business Investments, Ltd., 172, Bishopsgate, E.C.2.

RECEIVER APPOINTED OR RELEASED

B. SCULTHORP AND SON, LTD. (office suppliers, stationers, etc., London).—G. A. Ashcroft of 1, Camberwell-grove, S.E., ceased to act as receiver or manager on May 23rd, 1925.

TOTTENHAM PRESS, LTD.—J. A. G. Anderson of 32, White Hart-lane, Tottenham, was appointed receiver on May 11th, 1925, under powers contained in mortgage debenture dated April 16th, 1924.

Action for Price of Blocks.

An action was brought at the Clerkenwell County Court on the 18th inst., by the Granville Publishing Co., Ltd., Strand, against William John Daniels, 227, City-road, E.C., claiming £15 17s 5d. for printers' blocks supplied to him. Mr. Radcliffe appeared for the plaintiff company: the defendant conducted his own case. The defendant was stated to be a model yacht builder

Mr. R. H. Baines, who described himself as a director of the company, said that after some correspondence with the defendant he had an interview with him to arrange for a write-up article, with pictures, in the *Illustrated Country Review*, and told him there would be no charge for the article, but the blocks would be charged for at the rate of 1s. 9d. per square inch. Defendant eventually agreed to have the article.

Defendant: How many copies of this paper are printed?

Witness: I can't tell you.

Defendant: I put it to you that a sufficient number is printed to give the gratis copies to those for whom it is printed.

Witness: No.

Defendant said he could not get the paper at the bookstalls.

Witness said it could be got if it were ordered.

Defendant said he wrote cancelling the order he signed. Their representative promised to supply a printed proof, with an indication of the number and size of the illustrations proposed, but this was not done, and therefore they did not fulfil their part of the undertaking. He stipulated that blocks should be suitable for his next book on model yachting, but they were too large to be of any use to him. In spite of his cancellation, they reproduced the article and pictures. He had not the copyright of the photographs the plaintiffs' representative chose.

Charles Carr, manager of an engraving company, said they made the blocks. He did not consider 1s. 9d. per square inch excessive.

In reply to the defendant, he said the trade price of the blocks was 7½d. per square inch.

Deputy Judge Thomas said as the defendant had signed the contract he was liable.

Judgment was given for £15 2s. 5d.

ALLARDYCE & Co, Ltd,
PAPER
THE BLUE BOOK
MERCHANTS
85, Southwark St, London.

WHAT IS THE BLUE BOOK?

THE discriminating printer is not only a master of his craft; he is a paper expert as well.

He knows that his paper must be right if his work is to receive its due meed of appreciation.

Our papers have the reputation for a high standard of value, regularity and reliability.

Further, we give prompt delivery—a most important factor with rush orders.

The BLUE BOOK contains over 200 samples of every grade of paper, simply but comprehensively cross-indexed for immediate reference.

Clearly printed specimens are shewn of every substance in all the qualities stocked.

There is also a separate price list of our billhead series, and samples of each quality will be found in the Sundries section, including the well-known Second quality—THE STANDARD BILLHEAD.

The BLUE BOOK is the last word in sample books, and a copy will be sent upon request.

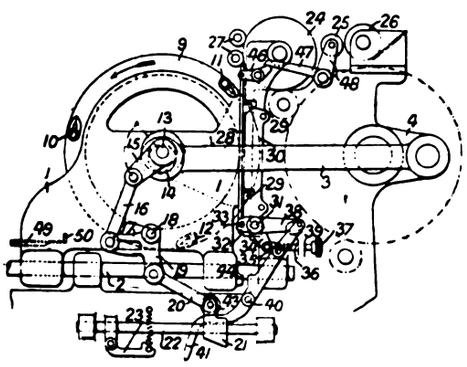
New Inventions

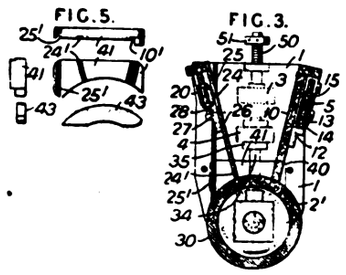
Cutting Out Letters.



Types 1 for cutting out characters from a paper or other sheet and impressing them into cardboard to form showcards, etc., as patented by the X.L. Showcard Machine Co. and Mr. A. O. W. Kindell, are provided on their backs with dovetail or other grooves 4, Fig. 3, to receive a metal or other strip 5, Fig. 7, of corresponding shape to hold the types against accidental displacement during the cutting and impressing operation. Two or more lines of type may be held in paral-

lelism by providing the table 6 on which the cardboard and superposed paper, etc., sheet is placed, with side guides 7 in which are mounted slides 8 to which the ends of the strips 5 are secured. The slides are fixed in adjusted position by set-screws 9 bearing against the bottom of the guides. Spaces may be formed similarly to the types.

Automatic Platen Presses.



In platen presses having automatic sheet feeding and delivery mechanism and a device associated with the platen actuating mechanism to throw off the impression when no sheet is fed, as patented by Mr. M. Rockstroh, means are provided actuated by the impression throw-off device to interrupt also the ink supply and the inking of the forme. The platen 1 is reciprocated along guides 2 by a crank 4 and rods 3 in the ends of which are engaged eccentrics 14 on a shaft 13, on which the platen is mounted. Sheets are taken from a feed table 49 and

conveyed through and delivered from the machine by grippers 10, 11, 12 on two rings 9 revolving round the platen. Tripping of the impression is effected automatically by rotation of the shaft 13 if no sheet is fed to the front stops 50 in the following manner. An arm 15 on the shaft 13 is connected by a rod 16 to a bell crank lever 17 pivoted at 18 to the platen 1, the other arm 19 of the bell crank being connected by a rod 20 to a crosshead 21 which normally is prevented from sliding along a guide 22 by a pawl 23. If no sheet is fed to the front stops 50, a finger device of known construction disengages the pawl 23, and the crosshead 21 moves to the right, thereby actuating the bell crank 17, rod 16, and arm 15 so as to turn the shaft 13 and throw off the impression. Ink supplied from a fountain 26 is transferred by a messenger roller 25 to a cylinder 24 and thence applied to the forme by rollers 27 reciprocating along guide rails 28 having wedge shaped blocks 29 engaging corresponding recesses in bars 30. A spindle 31 carries slotted levers 32 engaging studs 33 on the rails 28, and is adjustable by means of a lever arm 34, rod 35, spring 36, and nut 37 to move the rails 28 higher or lower in known manner. The spindle 31 also carries an arm 38 connected by a link 39 to a lever 41 pivoted at 40. When the crosshead 21 moves to the right and actuates the platen throw-off shaft 13, a roller 43 on the crosshead engages the lever 41 and depresses it, causing the guide rails 28 to move downwardly and outwardly by reason of the wedges 29, so that the inking rollers 27 on their next downward movement do not contact with the forme. At the same time the messenger roller 25 is prevented from contacting with the ink cylinder 24 by a pivoted lever 46 connected with the guide rails and engaging an arm 47 on the carrier 48 of the messenger roller. When the throw-off shaft 13 is actuated to restore the impression, an abutment 44 on the platen strikes the lever 41, thus raising the guide rails 28 and rendering the inking rollers operative.

Inking Apparatus.

In an invention by Mr. L. J. Swaim, a duct roller 30 of an ink supply fountain is mounted in end plate 1 connected by cross-bars 5, 20 which carry adjustable side plates 10, 26, whose edges engage in grooves in the end plates. The roller 30 is adjustably mounted by screws 34 passing through lugs 4 in the end plates and secured by locking nuts 35. The plate 26 may be fixed in the grooves 24 when thin ink is used or in the grooves 25 when thick ink is used. To provide tight joints each end plate has a flat recess 40 to receive a piece of packing 41 formed with the appropriate grooves, 10^1,

24^1, 25^1 in continuation of the grooves in the end plates, and the bottom of each end plate has an arcuate recess 2^1 with a packing piece 43 which engages the side of the stepped down end of the roller 30. Both packing plates 41, 43 are backed by similar shaped metal follower plates with adjusting set screws to take up wear on the packing. The side plates 10, 26 carry lugs 12, 27, to which are attached adjusting screws 13, 28 passing through openings in the cross-bars 5, 20. Nuts such as 14, 15 on each screw 13, 28 serve to adjust each side plate up or down, and a set screw tapped into each side plate and moving in a slot in its cross-bar clamps the side plates in adjusted position. Screws 50 secured to lugs 3 on the end plates and carrying lock-nuts 51 adjustably attach the fountain to the machine.

Water Resisting Paper.

According to an invention by Mr. K. L. Moses, a tough, flexible paper-like product, which has high tear-resisting qualities, a high folding number, and will resist abrasion, hold stitches as well as some fabrics, and remain tough when saturated with water, is obtained by impregnating sheet material formed of long fibre pulp, such as is obtained from hemp, jute, ramie, and the like, with a rubber compound. The rubber may be dissolved in a hydrocarbon or rubber latex may be used. After drying the material may be condensed by calendering.

A GENERAL licence for the importation of the following paper goods into Switzerland over all frontiers was effective from June 1st: Packing paper, not elsewhere mentioned in the tariff, oiled or not; paper and cardboard, printed or lithographed, bound or framed; prints and engravings other than photographs; paintings; and paper bags, cornets and capsules.

New Trade Marks.

OVERSEAS-LINK.

Registration of this Trade Mark shall give no right to the exclusive use of the word "Overseas."

456,732. Paper and stationery included in Class 39. William Duff and Son, Ltd., 113, Cannon-street, London, E.C.3; manufacturers.—February 28th, 1925.

458,467. Printed musical works and publications. Francis, Day and Hunter, Ltd., 138 and 140, Charing Cross-road, London, W.C.2; publishers.—April 29th, 1925.

DUROPRUFE.

457,700. Paper (except paper hangings). Thos. Norman and Son, Falcon Works, Lynton-road, Bermondsey, London, S.E.1; wholesale and export paper merchants and box-makers.—March 31st, 1925.

PUBLICITY.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE paper market is characterised by a dullness which has apparently set in for the summer season. Among merchants there is a great striving after available trade and much disappointment at results. The less business there is to be secured the greater is the volume of energy necessary in order to obtain a portion of it. The most disheartening post on the staff of the paper merchant is that of salesman, except where there is a business in the hands of a sole proprietor. The small amount of success that attends the paper salesman's efforts is calculated to sap his energy. In some cases that does happen and results go from bad to worse.

* * *

CONSIDERING the state of trade generally the amount of business passing in both paper imports and exports last month can be regarded as satisfactory. Though there has been no great forward movement in paper exports, the returns indicate a better showing than one would expect. As regards imports of paper and cardboard into this country from abroad last month (1,235,814 cwts.) they were on a moderately large scale, though there is shown a decrease of 151,488 (10·9 per cent.) compared with twelve months ago. Compared with May, 1923, however, imports were up by 268,683 cwts. (27·7 per cent.). In value the total inward shipments—£1,282,154—indicated a decrease af £79,775 (5·1 per cent.) from the same month a year ago, but compared with May, 1923, there was an advance of £188,774 (17·2 per cent.). Printings and writings (396,809 cwts) represented 32·1 per cent. of the total imports and exceeded the shipments of twelve months ago by 37,780 cwts. Packings and wrappings (349,889 cwts.) registered 28 per cent., but declined to the extent of 36,452 cwts. Strawboards (312,039 cwts.) were 25·2 per cent. of the total and recorded a drop of 145,373 cwts., whilst millboards (111,923 cwts.) declined to the extent of 11,332 cwts. During the first five months of the year paper and cardboard imports—5,758,564 cwts.—are an advance of 435,606 cwts. (8·1 per cent.), whilst the value (£5,895,447) shows a rise of £447,907 (8 2 per cent.) compared with the corresponding period last year.

* * *

NEWFOUNDLAND, with 145,482 cwts., was by far the largest supplier of printings during May, shipments from that source exceeding those of twelve months ago by no less than 58,318 cwts. Norway came next with 76,971 cwts., a figure which marks a great advance when compared with the 5,713 cwts. twelve months ago. Sweden's contribution (60,437 cwts.) declined by some 8,000 cwts., whilst the shipments from Finland (56,271 cwts.) marked a drop of 79,816 cwts.

* *

SHIPMENTS of British paper and cardboard last month—454,787 cwts.—mark advances respectively of 32,511 cwts. (7·6 per cent.) and of 100,482 cwts. (28·3 per cent.) compared with May of the last two years. Not only is last month's figure an improvement on corresponding months, but it also ranks as the third highest during the last three years. This, of course, is due to the largely increased exports of printings. The total value of the overseas trade last month—£876,059—shows advances respectively of £88,408 (11·2 per cent.) and £158,726 (22 1 per cent.) contrasted with May last year and two years ago. Printings alone (342,918 cwts.) sent abroad during the month represented over 75 per cent. of the total quantity, and surpassed the shipments of May last year by 68,521 cwts. The figures relating to packings and wrappings (20,773 cwts.) were unsatisfactory compared with the 61,000 dispatched abroad twelve months ago. Writings (19,417 cwts.) and stationery (15,458 cwts.) were in slightly improved request, advances being shown respectively of 498 cwts. and 572 cwts. compared with May last year. During the first five months of the current year paper and cardboard exports reached 2,062,213 cwts. (£4,000,028), an advance of 221,022 cwts. (12 per cent.) in quantity and of £434,778 (11·9 per cent.) in value.

Wembley Certificates.

Foreign Paper Withdrawn.

The certificates of honour issued to exhibitors in last year's British Empire Exhibition, which were printed on foreign paper, are to be withdrawn.

Sir Travers Clarke, chief administrator to the Exhibition, stated recently that the Exhibition authorities had made a close investigation into the circumstances in which certain certificates of honour of the Exhibition were printed on a foreign-made paper. The following letter from Messrs. Sanders, Phillips and Co., Ltd., the printers of the certificates, would make it clear that the use of a foreign paper was purely accidental, and was not sanctioned by the Exhibition authorities:

"Sir,—I have to express the deep regret of my firm for the mistake by which paper of foreign manufacture was used for the printing of the certificate of honour of the British Empire Exhibition. We were aware, when submitting a tender for the work, that a condition of the contract was the use of British Empire products solely, and all the specimens of paper which were submitted with our tender were of British manufacture. The sample chosen by you was necessarily, therefore, of British manufacture. Through a mistake which we deeply regret, and into the cause of which we are making inquiry, a paper of foreign manufacture was used instead of the British paper selected. We shall be happy to reprint the certificate on British paper at our own expense, and also to make good to the British Empire Exhibition authorities the cost of withdrawing such certificates as have been already issued. I need not assure you that the use of the foreign paper was purely accidental."

Sir Travers Clarke said the Exhibition authorities had, therefore, decided to withdraw the certificates printed on foreign paper. A certain number had been already issuedto exhibitors. If the recipients would return these certificates to the secretary of the Exhibition fresh certificates would be issued to them.

Papermaker's Comment.

Mr. J. R. Yates, a director of paper mills, writes to the *Morning Post* on the subject as follows:—

"The arrangement whereby British manufacturers—even papermakers—receive Certificates of Honour from the British Empire Exhibition on paper watermarked 'made in U.S.A.' loses none of its piquancy when it is added that the Roughway Paper Mills (Kent), with the kind permission of the Wembley authorities, last year constructed a dandy-roll (the expensive instrument making the watermark) bearing the Wembley Lion combined with the legend 'British Empire Exhibition, 1924,' and proceeded to produce various classes of paper bearing that watermark, samples of which were sent to Wembley for consideration. The paper was named 'Wembley Bond.'

"Endeavours to get the powers there interested in any variety or quality of those specially watermarked papers, last year or this year, were unavailing. Conceive, however, the difference between the possession of a Certificate of Honour watermarked with the Lion combined with 'British Empire Exhibition,' and one proclaiming that it was 'made in U.S.A.'

"I may be permitted to add, as a test of the responsible position of the Roughway Mills, that they hold the exclusive contract with the British Government for all postal order paper."

IN order to cope with increasing business, the Bristol warehouse of Windebank and Co., Ltd., is being removed to larger premises situate at 25, Nelson-street and Tower-lane, as from the 22nd inst.

News-Print Rivalry.

According to current gossip in Montreal, says the *Paper Trade Journal* (N.Y.), the proposed merger of the Abitibi Power and Paper Co., the Spanish River Pulp and Paper Co., and possibly some other companies whose mills are situated in Ontario is being negotiated with a view to placing these companies in a poiition to compete with the International Paper Co., which has acquired such extensive interests in the industry in Canada. That the proposed merger is pretty definitely assured is the deduction made from the fact that Sir Herbert Holt has puplicly acknowledged that the negotiations are under way.

The merger, according to gossip, will include seven big mills with a capacity at the present time of 1,635 tons of news-print per day.

CAXTON CONVALESCENT HOME, - Limpsfield, Surrey.

President—C. J. DRUMMOND, Esq., M.B.E., J.P.
Treasurer—The Right Hon. C. W. BOWERMAN, J.P., M.P.

Devoted exclusively to the use of Men and Women engaged in the Printing, Process Engraving, Bookbinding, Stationery, and Kindred Trades. Patients received from all parts of the Country.

A Subscription of Three Guineas annually by an Employer, Society or Workshop gives the right to nominate a Patient each year for a Three Weeks' residence at the Home on recovery from illness.

Penny-a-week Subscriptions from employees are earnestly solicited. Annual Subscribers (minimum 4/-), through a collector or direct to the Office, are entitled to a Three Weeks' stay at the Home entirely free. Wives of men in the trade are now admitted.

Paying Patients: £1 11s. 6d. per week.

Paper Trade Golfing Society.

Competitions for the Alliance Challenge Cup and the Blades Challenge Salver.

The second annual competitions for the Alliance Challenge Cup and for the Blades Challenge Salver took place under the auspices of the Paper Trade Golfing Society at Walton Heath on Thursday, June 11th.

The Alliance Challenge Cup.

The Teams entering for this competition were as follows:—

The Newspaper Golfing Society.—Messrs. P. C. Burton, O. P. Horlick, E. Legge, H. Ernest Le Bas, F. A. Neill-Boyd, H. Halty, J. Livingstone, W. N. Darnborough, and Sir Hedley Le Bas.

The Printers' Golfing Society.—Messrs. E. Noel Layton, R. D. Chorley, Fred Jefferson, Captain Edward Jefferson, D. Peel, Lieut.-Col. H. R. Fletcher, E. H. Dennis, D. O. Dempster and H. Evans.

The London Press Golfing Society.—Messrs. H. H. Hilton, C. B. McFarlane, Sir Frank Newnes, Bart, Guy L'Estrange, Percival Marshall, Sir Emsley Carr and H. Tingey.

The Paper Trade Golfing Society.—Messrs. A. J. Mitchell, R. H. Calcraft, A. Dykes Spicer, A. S. Duff, G. W. Shilcock, F. C. Hardingin, Captain Noel V. Bowater, S. G. Sanders and W. C. Powers.

Each society was invited to enter a team of nine players, the six lowest gross scores counting for the purposes of the competition. The result of the scratch aggregates was as follows:—

The Newspaper Golfing Society ...	501
The Printers' Golfing Society ...	508
The London Press Golfing Society ...	522
The Paper Trade Golfing Society ...	545

The best gross scores were returned by: Mr. H. H. Hilton, 76; Major P. C. Burton and Mr. R. H. Calcraft, 79; Mr. E. Noel Layton, 80; Mr. R. D. Chorley, 81; Mr. E. H. Dennis, 82; Sir Frank Newnes, Mr. C. B. MacFarlane and Mr. E. Legge, each 83.

The Newspaper Golfing Society therefore become the holders of the trophy for the second year in succession.

The Blades Challenge Salver.

In the afternoon a singles competition against bogey was played for the Blades Challenge Salver, and the following are the details of the top scores returned:—

Mr. H. Ernest Le Bas and Mr. J. Livingstone tied for the first place with scores of 2 up.

Mr. F. A. Neill-Boyd and Mr. S. G. Saunders tied for the second place with scores of 1 up, Mr. E. Noel Layton, Mr. R. H. Calcraft, Mr. E. Legge, Mr. R. D. Chorley and Mr. Albert Watts being all square.

Major P. C. Burton 1 down, Mr. E. H. Dennis 2 down, and Lieut.-Col. H. R. Fletcher 3 down.

Mr. H. Ernest Le Bas, who played from scratch, was in excellent form on the outward journey, returning a score of 35 (5 under bogey) for the 9 holes, and turning 5 up on bogey. Mr. R. D. Chorley was 4 up on bogey on the last 9 holes.

In the evening Mr. H. Ernest Le Bas and Mr. Livingstone played a deciding match over 18 holes, in which Mr. Le Bas was successful in beating Mr. Livingstone by 1 up.

Newfoundland Paper Enterprise.

The Reid Co., in Newfoundland, which is promoting a third papermaking enterprise on the Eastern Coast, has announced its decision to enlarge the proposed plant from a production capacity of 300 tons of news-print daily to 400 tons, as it has recently secured additional areas of woodlands contiguous to those previously held. American capital, says the St. John's correspondent of *The Times*, will be employed in this development and the actual construction will begin next spring. With this enterprise in operation the daily output of news-print paper from the island will, within two years, approach 1,100 tons.

INVENTION OF POSTAGE STAMPS.—Whatever they may say in England, observes the *Courrier du Livre*, the postage stamp is a French invention. In 1653 a notice was posted up in Paris informing the people that "persons desirous of writing from one district to another can rely upon delivery of their letters if they take the precaution to annex or affix so that it can be seen a 'billet' of carriage paid." These 'billets' were on sale at the Palace, doorkeepers' premises of colleges and other institutions, as also prisons, where they could be obtained from the gaoler. The notice added that these billets cost a sou. A specimen of these billets is kept in the national library. In spite of its utility, however, the use of the billet was abandoned for nearly 200 years before being revived in 1849.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

As the offset principle of transferring has now been applied to letterpress or relief printing methods, it will be appropriate if we describe a safe and speedy method in which these printing surfaces—so far as concerns photographically produced images or relief printing surfaces prepared by the primal aid of the camera—can be made and used in this special offset letterpress machine.

Photo-Litho Transferring.

The method we are about to describe is one that introduces a special anti-greasy etch, in connection with the *rolling up* method of block making, and will be found most valuable for the finest class of delicate line engraving work, whether used by the regular process engraver or the printer who makes his own line blocks. It permits the image being rolled up without the faintest risk of any of the lights of the picture taking up ink; thus ensuring a perfectly clean, sharp etching. Should ink have become attached to a dried part, it will be removed as soon as water is applied.

The procedure is as follows: A piece of ordinary thick zinc plate, 12 or 14 B.W.G., is sensitised, printed, inked, and developed in the usual manner, and washed well with clean water; it is now etched for three minutes with the ammonia compound etcher, as per formula previously given, and gummed. It may then be rolled up with perfect safety, the lines becoming fully charged with ink, and the plain parts kept pure and clean, without scum or ink, to attract and hold the dragons blood, asphalt, or resin powder in the subsequent powdering operations; thus ensuring the best work, and preventing waste of time and metal.

The Four Etching Processes.

Any retouching is now done, or dirt cleaned away. Then the back of the plate is protected with either shellac varnish or Bates black; any large spaces in the design are also painted out to save etching, as they are afterwards "routed out." The first etch is now made with:

Nitric acid	2 ozs.
Alum (powdered) ...	½ oz.
Water	40 ozs.

the time needed for this etching being about three minutes if very fine lines are in the work, five minutes if coarser work is in hand. The plate surface should be brushed over with an "atzpinsel brush" to remove the scum. The bath is rocked to and fro during the etching, unless a plate etching machine is used. The plate is next washed and then gummed up with gum arabic solution, and if etched for three minutes with the ammonia etcher, no scum will subsequently appear, as this combines with the plain parts and protects them.

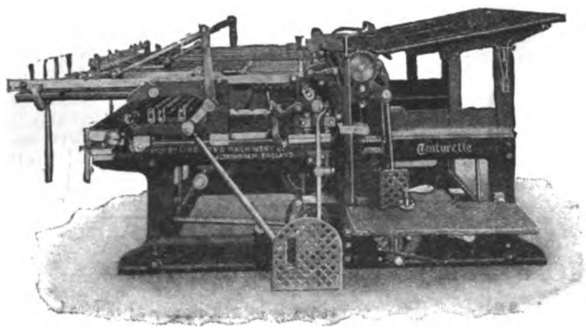
The plate is next damped, and the work rolled up with a litho "nap" roller charged with a mixture of transfer and black ink. Then the plate is dried and the work re dusted in with resin powder, and then fused with heat. Next follow with asphalt powder and re-fuse. After cooling the plate it is then given the second etch:

Nitric acid	3 parts
Water	40 parts
and a touch of alum	

etch for about six minutes or longer according to the character of the work. Now the image is re-rolled up again with ink, etched with the ammonia etcher, the plate having previously been damped with water in which a small quantity of dextrine had been dissolved. Re-dust the work with rosin powder, and re-fuse. Then follow with asphaltum and re-fuse. The dusting off is done with a puff dabber brush, and any superfluous specks are removed with a steel "scraper." Then it is given the third etch.

Nitric acid	4 parts
Water	40 parts

The approximate time for etching with this bath is ten minutes or more. Now the work should stand in relief, so that the old ink may be washed off, and the plate rolled up with a glazed litho roller, and some hard etching ink, which contains more wax than the former; the plate is then slightly heated so as to cause the ink to run down the sides of the lines just a trifle; the work is again redusted with rosin and asphaltum and fused as before, and is then given the fourth etch:—



Nitric acid	8 parts
Water	40 parts

It should now stand etching for 15 minutes or even longer. When the plate is deep enough for printing, it will be found that there is what is called a "shoulder" attached to the sides of the lines; this is removed by first washing the plate over with whiting and soda, then drying it, and re-inking up the surface of the image with a glazed roller and hard ink, afterwards dusting on rosin and fuse, and asphaltum and fuse. Then re-etch for the removal of the "steps." The time of the etch for this should be about five minutes. The plate should now be washed and finished ready for the mounter. The edges must be bevelled and the whites routed out. The block should now be ready for mounting and proof pulling, and be suitable for use in the typo offset machine.

"Vandyke" or Negativeless Images for Offset Printing.

There is another wide range of work that is making great headway for offset reproduction and which cuts very largely into the legitimate typographic branch where absolute facsimile work is involved—such as the reproduction of a printed book, or the reproduction of a line illustration, or map, plan, or similar work. This is known as the "Vandyke" reproductive method. By this process of sun transferring a complete printing image of a book can be reproduced for the offset machine without a negative or a camera, and a perfect result obtained, exact to copy. This process is a useful one, inasmuch as it permits the original copy (if of a sufficiently trans-

Digitized by Google

The Centurette, made by Linotype and Machinery Limited at Altrincham, Cheshire, is size for size the fastest Two-Revolution machine on the market.

It prints Double Demy at 3,000 per hour, and the quality of the work is above that usually obtained from a two-roller machine.

This result is obtained by the excellence of the engineering work put into this press.

Many Centurettes are in use for colour work.

It is made in two styles—(1) with printed-side-up delivery as illustrated above, or (2) with fly delivery.

Fuller details will be forwarded on application to

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON

lucent nature) to be used for facsimile reproduction without the necessity of preparing an intermediate negative. Unfavourable originals may be rendered translucent by means of melted paraffin wax, castor oil, etc., architectural drawings on thin paper, engineers' drawings on tracing cloth, or thin negative paper impressions can be successfully used for this process. A sheet of litho zinc of a suitable size is sensitised with the fish glue enamel solution, *i.e.*:—

Le Page fish glue...	...	1 oz.
10 p.c. solu. of ammonia bichromate	... ...	1 oz.
Water	... ...	4 oz.
2 p.c. solu. of gelatine	...	1 oz.

The further procedure requisite for this method will be fully explained in a subsequent article.

EARLY CHINESE PRINTING.—Apropos of the recent acquisition by the British Museum of what was stated to be "the second earliest piece of Chinese printing," Mr. Lionel Giles writes to *The Times*: "Among the Chinese MSS. in the British Museum, recovered by Sir Aurel Stein from Tunhuang, there are nine specimens of printing (exclusive of wood-cuts), all of which are probably of yet earlier date. Four of them actually show dates corresponding to 868, 877, 947 and 950 respectively, and one or two of the others may be confidently assigned to the eighth century, owing to the quality of the paper used. It is true that, with the exception of two fine rolls exhibited in the King's Library, these are in a more or less mutilated or fragmentary condition. The value of the newly acquired roll lies in its being an almost perfect specimen of early Sung printing, such as has not hitherto been seen outside China. It should not be overlooked, by the way, that printed documents of the 10th century are still known to exist both in China and Japan."

"BLOCKS FOR PRINTING."—The power of the picture is fully demonstrated by the extensive use of illustrations in newspapers, circulars and booklets, etc., as well as in the magazines, and the suggestive effect of a picture is found to be more powerful than any actual description in cold type could be. Line and half-tone blocks now enter largely into the every-day work of most printing offices, and it is important that printers should have a knowledge of the wide possibilities of block-making. To facilitate the acquisition of such knowledge, the Federation of Master Process Engravers has issued a useful booklet that gives much information on the production of line blocks, together with hints on the ordering of illustrations, their reduction or enlargement from originals, how to make effective use of illustrations, and a lot of ideas that will be found of service in the issuing of pictorial matter. The booklet contains many illustrations that will be found full of suggestions by the live printer. The use of tints in connection with line is shown with special force in several of the pictures. The book is largely the work of Mr. Roy Hardy, who has worked under the instructions of the committee of the Federation of Master Process Engravers, and he has done his task well in the production of a booklet that will be a thoroughly practical addition to the printer's office library. This is the first booklet issued by the Federation and it is intended that further booklets will be issued dealing with half tone, colour, and so on.

Costing as Applied to Lithography.

By A. WILLIAMSON, F.C.W.A.

(Costing Secretary, Federation of Master Printers).

It has been expressed in various Cost Congresses held in the past that an insufficient amount of time has been given to the connection between the litho section and the Federation Costing System. It has been also expressed that there was some difficulty in applying it. So recently as the Norwich Congress reference was made to this. There are a number of firms in the country running the system successfully, and I am quite sure it is possible for any litho firm to apply the Federation system.

My responsibility carries me into many parts of the country, and I am obliged to keep my eyes open for new methods, so that the Costing Committee may consider them. I have failed to find any system that can be applied so uniformly and so successfully as the Federation system.

No Alteration in Principle.

There is no alteration in principle. One of the main principles is that of departmentalisation of expenses—every department, as on the letterpress side, should carry its right quota of the expenses. Rent, rates, light and heat divide quite naturally on floor area. Departmental expenses in the litho section are matters which require much more care, probably, than on the letterpress side. The other principles of the Federation system, such as interest on capital and depreciation of the plant, are equally applicable to the litho section.

Hourly Rates.

The recovery of these expenses by hourly rates is just as necessary in one section as another. Every operation can have its correct hourly rate found, and there is no doubt at all that an all-inclusive hourly rate is a much more satisfactory way of recovering the cost of an operation than by percentages.

Flat Percentage on Wages Alone Inefficient.

There are to-day firms who attempt to find the cost of their production by a flat percentage on wages, and a careful examination of that method will prove conclusively that it is a very inefficient method of dealing with it. You have only to take, say, the machine-room, remembering that machines run up to enormous amounts when compared with the flat-bed even in its larger sizes. As wages do not advance in the same ratio as the cost of the plant in use, any attempt to recover the cost of the output by a percentage on wages must be futile. It is essential that the various expenses should be definitely traced to the departments which are consuming them. To these expenses, after being brought down to weekly amounts, the weekly wage is added. To the weekly wages and departmental expenses a percentage is added of the charges for supervision, general labour, and overhead expenses. This calculation is done once a year only. Then, finding the weekly cost of the department and dividing into that the total hours for the various operations, an all-inclusive rate is obtained.

Each section of the printing industry claims that its difficulties are greater than those of any other section. If you will dissipate from your mind the thought that there is any difficulty in your particular section, we shall then go ahead. I have indicated that the investment differs in every department. You have different values for different machines. You have the transferring section, for instance, where an ordinary hand-press can be bought for anything between £10 and £20. You cannot charge the transferer's time on the hand-press at the same rate that you would charge out the time for a transferer working on a quad-crown press which calls for a considerable amount of power at a certain time. The analysis of the cost for these two operations can be successfully found if the Federation system is applied.

Artists' Department.

Here a question arises as to the sketches Every lithographer carries a considerable amount of expense in the way of unused sketches. I have examined the costs of a number of litho firms, and I have found that in some cases the cost of the unproductive sketches reaches an amount of 50 per cent., in some cases even higher than that, and very few of them less than 33 per cent. of the total cost of the department. How is that particular expense to be recovered? Is it to be recovered as an expense on the whole of the factory, or should the cost be definitely included in the expenses of the artists' department?

How to Charge Sketches.

The Statistical Sub-Committee of the Costing Committee have discussed this particular point, and their view is that the sketches should be a definite charge on the artists' department, and should not be spread over the whole of the business. The reason for coming to this conclusion is that if you distribute the cost of these non-productive sketches over the whole of the departments you are making your customer pay for work he has not ordered. Probably 50 per cent. of the customers every litho firm has do not call for sketches. You must therefore admit that the correct way of dealing with non-productive sketches is to throw back that charge into the artists' section, and recover the expense by the hourly rate which is used for artists' work.

A Sketch Account.

The suggestion is that a sketch account should be opened. The cost of every sketch should be entered on one side of the account, and every sketch sold should be credited on the other side, so that at the end of the year you have an account which shows the amount of originals that have been produced, and on the other side you have the account showing how much of that work has been sold. By keeping this account, even if in the year under consideration some of these sketches may not be sold, they may be taken up in a subsequent year, and therefore the department would get credit ultimately. This would naturally mean that the rate per chargeable hour for the artist's work would be higher than it is in any factory where the cost of the unproductive work is distributed over the whole of the costs. I am quite sure if you were buying commercial lithographic work you would go to the man who distributed the cost of his sketches through the artists' department rather than the man who spreads the cost through the whole of his factory.

Stones.

Another section which calls for a considerable amount of attention is that of the stones. This question of the cost of a stone is one upon which there have been considerable differences of opinion. The Costing Committee, some four or five years ago, set out a scale of charges for the various sized stones. The scale was carefully drawn up, taking into account the amount of time necessary for preparing stones, the cost of wear-and-tear through the preparing and polishing, and also a careful account had been kept of the amount of breakages, so that the stone table carried the cost of the various stone expenses to which I have referred.

Stones and Plates—Capital Investment.

But other complications have arisen, particularly since the introduction of the rotary and the offset processes, and the suggestion is that any purchase in the original stages should be capitalised, but an account should be kept of the purchases—that is to say, in laying down the litho department you would have to buy a considerable number of stones and plates, and those original purchases would be taken into the capital account. If you spend, say, £100 in plates, any further purchases for plates would be passed through the revenue account as an expense against the department. If an additional machine is introduced, that would

Address delivered at the recent Cost Congress, Federation of Master Printers, at Buxton.

Lithographic Trade Review.

NOTES AND NEWS.

BUSINESS in the lithographic section of the industry appears to be fairly brisk in general, and so far as London is more particularly concerned, the extent of work being transacted is described as very satisfactory. Unemployment amongst working printers in London is reported to be less to-day than at any period since the war, whilst the number signing the out-of-work books at the present time represents the normal figure experienced in pre-war years.

BRITISH initiative has made great headway in supplying lithographic plates not only to users in this country, but abroad as well. In both directions encouraging progress has been made. The most pleasing feature is that an industry which was formerly largely in German hands has been wrested from them and securely established in this country. Indeed, so successful have been the efforts of English manufacturers that there are even German lithographers who come here for their supplies. Similarly, important overseas markets which were formerly in German hands, have been firmly won for the British product.

THE establishing at West End-lane, Barnet, of the new business going by the title of Phototype Limited is further evidence of the strides that photo lithography is making into the realm of the reproduction of letterpress matter. Phototype Limited bases its hopes of commercial success upon specialising in this particular line of work, and not upon any patented or secret processes. The purpose is to use the most up-to-date scientific means for the reproduction by standardised methods of anything and everything black and white—pencil drawings, black and white paintings, type printed pages, and so on. It is expected that a big field will be found in the photo-litho printing of smaller editions of encyclopædias and other works of reference.

SERVICE for the photo-litho printing trade will be a strong feature of the Phototype work. Printers can obtain ready printed-down plates in zinc or aluminium of any size up to 60 by 40. Those interested should write the company for a copy of a specimen book recently issued in which will be found a series of examples of Phototype reproductions of text and illustrations, including music and foreign languages. Of special interest are examples showing original typographically printed pages side by side with Phototype reproductions. The effects are surprisingly good.

TO LITHOGRAPHERS and process workers the subject of the forgery of paper money is one of special interest. The last has not yet been heard of the remarkable case in connection with which William Henry Harrison, 40, engineer, of 322, Earl's-court-road, made another appearance before Mr. Basil Watson at Old-street Police Court last week, being further remanded. One of the charges against him is that he feloniously and knowingly had in his custody and possession between February 19th and June 4th, at 322, Earl's-court road, a printing press, photographic apparatus, arc lamps, acids, paper, zinc plates, and other materials for the purpose of printing forged Post Office British money orders and advices. In two rooms were found a great quantity of very elaborate and complete photographic and printing articles and tools, which weighed a good many hundredweights.

MR. FREDERIC T. CORKETT'S letter in our last week's issue made the noteworthy suggestion that the technical side of the production of forged paper money—involving, as it does, the procuration and use of out-of-the-ordinary apparatus and supplies—offers clues which the authorities have not yet learned to follow up. We hope that this suggestion will receive due attention from those whose business it is to protect the community from the activities of the forger.

LITHOGRAPHERS on this side of the Atlantic should find stimulus in watching the growth of solidarity in the lithographic industry of the United States. The movement (to which we recently drew attention) to form in America a "Lithographic Technical Foundation" for the advancement of research and technical education in the litho trade, appears now to be well on the way to success. Appeals made to lithographers throughout the States have resulted in most, if not all, of a $600,000 fund being forthcoming, and there is talk of the total aimed at being over-subscribed.

THE value of technical research for the benefit of the whole lithographic industry is obvious. As regards technical training the scheme is based on a system of "co operative" training devised twenty-five years ago by Dean Herman Schneider, of the University of Cincinnati, which since has spread to three or four hundred city high school systems. At the present time about twelve hundred students are said to be working on this co-operative basis in many different varieties of manufacturing plants and commercial houses, one-half of the students being in school while the other half is doing practical work. They alternate on their jobs and school work every four weeks. It will be interesting to see how this scheme works out. The success of the fund shows at any rate a considerable measure of trade solidarity amongst American lithographers, who are also planning co-operative advertising on a large scale.

THE quarterly report of the Amalgamated Society of Lithographic Printers has just been issued and contains matters of interest to the trade. We quote here a paragraph by the general secretary of the Society on the subject of apprentices in the litho section of the trade:—"It has often been thrown at us, not only by individual employers, but at conferences with their Federation, that there are so many incompetent men in the trade who are not worth the minimum rate. We ask them who is responsible for the selection and training of such as apprentices if they do exist? Some drastic efforts will require to be taken in the future by both the employers and the Society to see that a more practical and common sense system is adopted than the haphazard methods of the past, which has been entirely the fault of the employers in indenturing boys to the trade and not seeing to it that the terms of the indenture are carried out. There are some shops where only one man is employed, and sometimes two, where it is impossible to train an apprentice decently. Such places should be prevented from having apprentices altogether, and parents should be advised against putting their sons into such firms and also to see that in larger firms the terms of the indenture or agreement are being thoroughly adhered to."

THE annual outing of the M.D.'s—the tin printing section of the Amalgamated Society of Lithographic Printers—took place on Sunday to Brighton. The dinner—served at the Catfield Hotel—was presided over by Mr. T. Bond, the president of the section. A number of interesting toasts were proposed and responded to, and, thanks to the efforts of the energetic secretary (Mr. B. Haynes) and others, the outing proved a highly successful and enjoyable one.

MR. A. J. DOWDEN, assistant secretary to Mr. Woodgate Stevens, of the London branch of the Amalgamated Society of Lithographic Printers, has been convalescing at Eastbourne, and has now returned to his duties after his prolonged illness.

MUCH satisfaction is felt by members with regard to the progress being made by the London plate preparers' section of the Amalgamated Society under the secretaryship of Mr. C. W. Sims, who went to this post some six months ago. The amalgamation of the plate preparers with the London branch of the Society, it will be remembered, took place a year or two back.

THE Lithographic Artists are congratulating themselves upon the very successful triennial delegate meeting held at Stoke-on-Trent during Whit Week, when the delegates were warmly welcomed to that city by Mr. S. Clowes, M.P., on behalf of the Mayor. Amongst the pleasant recollections of the week's activities is the cordial hospitality shown by Mr. G. Wade, a director of the Chromo Transfer Co., Ltd., who entertained the delegates to luncheon whilst in the city.

OWING to the entire absence of any kind of friction in the trade, the delegates were fortunately able to give a considerable amount of attention to the domestic side of the Society's work. The funds were found to be in a very healthy financial condition, and owing to this fact it was decided to increase slightly the sickness and unemployment benefits without increasing the members' contributions. The meeting also decided to take actuarial advice with regard to further developing the Society's superannuation scheme. It was thought that by about the year 1930 a scheme providing for substantial pensions at the age of 65 might be put into operation.

AN interesting afternoon was spent at Stafford, where the delegates arranged a meeting with the general council of the Amalgamated Society of Lithographic Printers, who were holding their assembly at Birmingham during the same week as the Artists. A very useful conference took place between the two bodies on matters of mutual interest.

FROM examples that reach us now and then of the work of Messrs. Jesse Broad and Co., Ltd., of Manchester, it is evident that this firm is well equipped for the design and production of lithographic printing. Reference is made in a paragraph elsewhere in this issue to a new catalogue of pen ruling machines by Messrs. John Shaw and Sons, of Honley. A specially interesting feature about this catalogue is that the whole thing, letterpress and illustrations, is produced by rotary offset. Though offset lithography is often not very satisfactory for the reproduction of machine details, it serves the purpose well in this case, whilst one at least of the illustrations has a sharp "contrasty" effect that suggests gravure. The offset text matter comes up excellently, and the cover—in two delicate colours with embossing—is most suitable and attractive.

LITHOGRAPHERS (and others) concerned with posters and advertising generally will find interest and instruction in every monthly number of the *Placard and Service Bill-poster* (Sheldons, Ltd., Leeds). The magazine contains numerous reproductions of pictorial advertising, together with articles on the art, business and other aspects of publicity work.

The Typon Photo-Reproduction Process.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

The sensational interest aroused by the Typary composing machine at the Printing Exhibition caused the novel reproduction process called Typon to be rather overshadowed, and it was probably overlooked by many visitors to the stand of Typary and Typon, Ltd., where the method was demonstrated. Not only is it an indispensable corollary to the Typary machine, as a means of transferring the typed copy to the printing plate, but it offers also considerable advantages to offset printers who may not at present contemplate installing the Typary machine. The Typon method can, in fact, be used by any shop with photo-lithographic equipment without any further plant than is usually employed, whilst an establishment with no such plant can instal the necessary equipment with much less cost than for any of the usual processes of reproduction.

Let us take the case of a shop having a photo-lithographic outfit, including a vacuum printing frame. Though any printing frame which will give good contact may be used, the vacuum frame is preferable because perfect contact can then be assured and all risk of failure eliminated. As it is best to expose the Typon paper with incandescent lamps, it will be necessary to construct a light box under the frame to contain the lamps, as many being used as will give 60 watts per square foot of printing surface. If 60 watt lamps are employed then there will be one lamp for each square foot of surface. The box can be detachable, so as not to interfere with the use of the frame for its usual purpose of printing down on to zinc plates. All that is now required is to purchase a few packets of the Typon paper and a yellow filter, the purpose of which will be presently explained. It is assumed that the necessary dishes and other dark-room equipment is available, and the suitable chemicals for the paper must be purchased if not already at hand. These chemicals are the same as are used for the development of dry plates, films and bromide paper.

The Reflex Process.

There are several ways of using the Typon process to suit different kinds of originals, and two sorts of paper are supplied—a stripping film paper and a non-strip paper. If the original is good, say sharp black type matter—a piece of the strip film paper is laid with its emulsion side up on the yellow filter, which is placed on the glass plate of the vacuum frame. The original is laid face down on the sensitised side of the Typon paper, and the back covered with a sheet of black paper or cloth, the frame being then fixed down. The exposure will be, according to light and subject, from 30 to 60 seconds. The sensitive paper is then developed, rinsed, fixed and washed in much the same way as an ordinary photographic bromide print.

Stripping the Film.

After having thoroughly washed out the hypo of the fixing solution, a piece of transparent paper ("Glassine") is squeegeed on to the film side, taking care to remove bubbles and creases. Surplus moisture is blotted off, and the print is then thoroughly dried, preferably in a drying box. The film adheres to the "Glassine" and can be easily peeled off its paper support, and now forms a very durable film negative. It is equally practicable to transfer the film to glass or celluloid, if desired for any special reason. By a slight modification of the routine, and by using a different kind of stripping paper it is possible to strip the film without using the "Glassine," thus obtaining a very thin and clear printing film, which can be printed from either side, according to its use for direct or offset printing. The "Glassine"-covered film can also be printed from either side, but requires a longer time than the uncovered film.

Process for Inferior Originals.

Obviously the process would be of only limited use if none but good originals could be reproduced. There may be cases where the original is slightly yellow or the paper rough and the printed matter not quite sharp. The Typon process provides for this by a method of printing in three steps. It may seem a roundabout method, but it is actually the shortest way out. The exposure is made exactly as for the reflex process, but non-strip paper is used, the subsequent treatment being the same as before described, except that the stripping is omitted. When the paper is dry a positive is made from the negative by exposing through the latter with the paper for the positive in contact. The exposure is from five to 20 seconds, according to the density of the first negative. For this step the yellow filter is not used. From the positive thus produced a second negative is obtained on the strip film paper, the time of exposure being three to eight seconds, development and other operations being as before. If the original is very poor, and the positive lacks density, the second negative can be improved by using a yellow filter and exposing a few seconds longer. The effect of this intermediate positive exposure is that the unsharpness and want of density of the first negative is remedied in the second negative.

Reproducing Originals Printed One Side.

So far the process described is for dealing with originals printed both sides, the printing on the opposite side of the sheet having no effect. But there may be opportunities of obtaining originals in good black lines printed only on one side of the paper, such as proofs from existing type formes, stones or plates. In this case, without using a filter, the original may be printed through (in a matter of about three seconds), as if it was a negative, on to the strip film paper, and the usual operations of development, fixing, washing and stripping follow. The negatives obtained by this single operation are quite good.

Making Camera Negatives.

Where a camera is available, the Typon paper can be used instead of plates or films, the sheet of sensitive paper being placed between two sheets of glass to hold it flat. With a pair of copying arc lamps as usually employed, and F/32 stop in the lens, the exposure will be about 1¼ minutes. Stripping paper being used, film negatives are obtained. The advantage of using the camera is that enlarged or reduced images are obtained, thus greatly increasing the range of usefulness of the process, and removing the objection urged against the Manul and similar processes that only same-size copies could be made.

Making Repeats.

For making a number of copies on one zinc plate, for printing several up on one sheet, it is naturally possible to make as many negative as are required when carrying through either of the foregoing processes, but as there might be differences between one negative and another due to exposure and development under varying conditions, a new way of solving this problem is offered by the provision of the Typon celluloid film, and the process of using it is extremely simple. Assuming that the original exists in the form of a stone, plate, block or forme of type, a good black-and-white proof is taken, and exposure is made through this on to the celluloid film, as many film negatives being made as the required number of repeats. The emulsion of the Typon celluloid film is so constituted that great latitude is permissible in the exposure. Development with full density and glass-like clearness of lines is easy, there being no need for intensifying or reducing. A forme can be made up with the films by attaching them to a glass plate according to a lay-out sheet placed under. By using the same care as in sticking up transfers, a large repeat negative is thus obtained without the necessity of employing elaborate and expensive step-and-repeat apparatus. The advantage over the transfer method is that shrinkage and distortion, such as may often occur in the transfers, is eliminated. Besides, the films are unbreakable, and are more durable than glass negatives. They can be stored away, and used again at any future time.

Can Typon be Applied to Blockmaking?

This question may be asked by those interested in letterpress printing or blockmaking—those in fact who have no interest in offset, or at any rate no means of applying it to that method of printing. Certainly it is quite easy and practicable to use the Typon films instead of glass negatives for printing on to zinc plates which are to be etched, but in a process shop where wet collodion negatives are regularly made for line etching it would not be considered any advantage to depart from the regular routine. Wet collodion negatives are made quite cheaply and quickly, and it is doubtful whether any economy could be shown by using the Typon films, unless cheaper labour could be employed, and that would probably be barred by trade union restrictions. The etching, finishing and mounting of the blocks would be exactly the same whichever process was used. If it were possible to print on letterpress machines with a shallower-etched plate, as in the Wharf Litho process, or from an un-etched plate, as for offset and direct lithography, perhaps with the aid of the "dry litho" method, then there would be some advantages to be gained by letterpress printers by adopting the Typon process. There is, however, the possibility that a letterpress printer might find it an advantage to make Typon films, and even go so far as to print them down on the zinc, passing on the rest of the work to some lithographic printer inclined to work in co-operation. One can also imagine a firm setting up with neither letterpress nor lithographic plant, simply laying themselves out to make Typon films and print them down on the zinc, then handing the plates to one of the numerous trade houses for machining. If new type-setting had to be done, and the installation of a Typary machine was not thought to be justified, there are numerous places in London where trade type-setting can be done quickly and cheaply. The type would only be needed for the purpose of pulling good proofs to form originals for the Typon process. A firm starting in this way would have the advantage of having little capital expense to meet, and rent and other overhead charges would be very low.

Other Applications of the Process.

The usefulness of the Typon process is not limited to the requirements of the printing trade. It has a wide field of application to the special purposes of amateur and professional workers who have occasion to make one or a few photo copies. It is often necessary to make facsimile copies from books, newspapers, magazines, patent specifications and legal documents, catalogues, and the like. For the amateur it is usually too troublesome and time-consuming to set up the apparatus for doing such work by the ordinary methods with the camera, and the professional who caters for it has to use some such expensive outfit as the Photostat. With the Typon process nothing more is required than to buy some of the special paper, and by using an ordinary printing frame and the regular dark-room equipment it is possible to go on making prints at any time without a lot of preliminary preparation. For educational purposes such a facility would be very valuable. The fact that the process can be taken up by anyone by simply buying the paper, without being required to pay a license fee is one of the most important points in its favour.

Leeds and Printing.

Monday's issue of the *Financial Times* contained a Leeds supplement setting forth the place held by that Yorkshire city in the country's trade and finance. Included was a short article dealing with the printing trade, and stating: "Printing is one of the most important of Leeds' commercial activities, and during late years it has been so greatly developed that to-day the city is recognised as the second centre of the trade in England, possessing as it does over 200 printing works, which give employment to more than 10,000 persons." Proceeding to draw attention to Leeds colour printing, the production of scholastic supplies and books and the manufacture of printing inks, the article concluded: "In Leeds is one of the few English firms who specialise in constructing large printing machines and accessories for high-speed rotary newspaper and magazine work. Messrs. Crabtree and Sons, of London and Leeds, are one of the little group of engineering firms who have helped to break American monopoly in this class of printing press. They have also a department for manufacturing rotary offset machinery, their models being recognised as creating a standard."

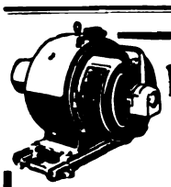
Trade Union Matters.

T.A. BALLOT RESULTS.—The secretary of the Typographical Association announces the results of recent ballots of the members as follows:—The proposal to pay 9d. for tea money to members called upon to work overtime when notice is not given until after the mid-day meal was carried by 11,367 to 1,188; that providing for pay at the rate of time and a-half for working through meal times was carried by 11,612 to 959. The ballot on newsmen's conditions, providing for a night off per fortnight and a half-day per week, without reduction of hours, was carried by 7,041 to 4,689, but several branches polled a majority against the proposal. Manchester had an adverse vote of 723 to 331, Liverpool of 615 to 513, Hull 218 to 12, Nottingham 118 to 77, and Cardiff, Exeter, Darlington and other branches also recorded adverse votes.

APPRENTICES IN THE ISLE OF MAN.—At a recent meeting of the Executive Council of the Typographical Association, consideration was given to a communication from the Isle of Man Unemployment Committee requesting the Council to give permission for the number of apprentices in the printing trade in the Isle of Man to be increased, in order to absorb some of the boys who were leaving school. The Council decided not to accede to the request.

WHARFEDALE MACHINE WAGES.—Mr. A. E. Goodwin, the secretary of the Master Printers' Federation, has informed the Typographical Association that his committee had considered the case of a machine minder at an office in Manchester who was working a double demy Wharfedale and a double demy two-revolution machine, and on whose behalf 6s. above the ordinary rate had been claimed. The committee, however, were of the opinion that the rules did not provide for such a combination of machines, and that the present rate of 3s. above the minimum was a fair one. The Executive Council of the Association, after consideration of Mr. Goodwin's letter, have decided to press the claim for payment of 6s. above the minimum.

T.A. PROPAGANDA.—Mr. H. E. Carss, organiser to the Typographical Association, has reported to the Executive Council on his visits to Truro, Redruth, Camborne, Penzance, St. Ives, St. Austell, Bodmin, and other places in the West of England. In one or two places, he stated, the result of his efforts on behalf of the Association was encouraging, but in the others no headway could be made with the men he interviewed.



WAGES POINT AT OXFORD.—The secretary of the Oxford branch of the Typographical Association has reported to headquarters that a member of that branch had been engaged as a machine minder, and on being placed in charge of a Wharfedale machine he made application to be paid the 3s. above the minimum wage which such a machine carried. The firm had replied by giving a fortnight's notice, and the branch recommended him for victimisation benefit. The Executive Council have agreed to the recommendation, and directed a letter of protest to be sent to the firm.

Printers in Festive Mood.

The dull weather which prevailed on Saturday failed to check the high spirits of the members of the composing room staff of Messrs. Stonhill and Gillis, when they set out on their annual outing. The party were conveyed by charabanc on a circular tour, embracing Aldershot, Farnham, Hindhead, Guildford and Ripley. Lunch, which was served at the Bush Hotel, Farnham, was presided over by the Father of the Chapel, Mr. G. D. Smith. The toast of "The Firm," which was enthusiastically received, was given by the chairman, and Mr. J. J. Butler (overseer) ably replied. After a pleasant run amid splendid scenery, a halt was made at Ripley, where the party did justice to an ample tea provided at the Talbot Hotel. The journey was then resumed to town, which was reached at 8.30 p.m.

THURSDAY, JULY 2, 1925.

London Newspapers and Trade Unionism.

IN referring last week to the London newspaper proprietors' threat of a stoppage in the daily newspaper offices, we intimated our confidence that the dispute would not be allowed to proceed to so serious a result. This confidence was quickly justified, for at a conference on the Wednesday, after we had gone to press, settlement was reached on the main point at issue—the right of the management in respect of the promotion or appointment of executives. The terms of agreement will be found in another column. We regard them as not only tending to safeguard the management in the discharge of managerial functions, but also as tending to protect trade unionism from one of its greatest dangers—the danger of selfish and disruptive action by factions which fail of due respect for the principle of collective bargaining upon which trade unionism depends. That a particular "chapel" should take advantage of the exigencies of an individual office to endeavour, without trade union authority, to force upon the management conditions beyond what had been agreed as equitable by employers and trade union leaders in conference, is a parallel case to that of an employer who should try by intimidation to prevent trade unionists in his employ from putting into effect advantages that have been gained in trade agreements made between their union and the employers' organisation. It is by loyalty to agreements made, and by loyalty to the ruling of one's trade organisation, that the individual, whether trade unionist or employer tends to gain most in the end, and to stabilise and strengthen the industry as a whole.

* * *

Unemployment Statistics.

OFFICIAL figures concerning unemployment among workpeople in the allied industries covered by the Unemployment Insurance Acts show a slight improvement at the end of May as compared with the position at the close of April, except in the case of paper and paper board making, where unemployment increased to the extent of 0·4 per cent. A report furnished to the *Ministry of Labour Gazette* states that employment in the paper trade continued fair on the whole. Apart from a certain amount of irregularity in some districts, full time was fairly general, except in the brown paper and hand-made sections. In the letterpress printing trade, employment generally remained fairly good; in London it showed an improvement, but in some provincial towns, including Leeds and Cardiff, it was slightly worse than a month earlier. With electrotypers and stereotypers employment was again good, but at Manchester there was some decline in jobbing offices. With lithographic printers employment was generally fairly good; it improved at Manchester, but was not so good as a month earlier at Leeds. With lithographic artists employment continued fair in London and slack at Manchester. With bookbinders in London employment was reported as slack; among other districts, employment continued fair at Edinburgh, and was slack and worse than in April at Leeds and Manchester.

* * *

Percentages.

THE percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 5·1 at May 25th, compared with 5·4 at April 27th and 5 3 at May 26th, 1924. In the paper and paper board industry the percentage was 7·4 at May 25th, compared with 7·0 at April 27th and 8·1 at May 26th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 6·4 at May 25th, compared with 7·0 at April 27th and 7·4 at May 26th, 1924. Figures furnished by trade unions in the printing, bookbinding and paper trades give a membership of 102,614 at the end of May, of whom 3,077 were unemployed, or a percentage of 3·0. There is a decline of 0·6 as compared with a year ago. There are further details from the trade unions which show the position in various sections of the printing industry. In letterpress printing, the number of members of unions at the end of May was given as 68,669, of whom 2·4 per cent. were unemployed at that date, comparing with 2·6 per cent. at the end of April and 2·9 per cent. at the end of May, 1924. There are respective decreases of 0·2 and 0·5 per cent. as compared with a month and a year previously. Compared with 12 months ago, there was a fractional decrease in London, Midlands, Eastern counties and Scotland, but a slight increase of the Northern counties, Yorkshire, Lancashire and Cheshire. Compared with a month ago, the only decrease in unemployment was in London, while there were increases in other areas. The returns relate to 10,069 lithographic printers and 15,459 bookbinders, the percentages unemployed at the end of May being respectively 2·5 and 3·4, rather lower figures than a month and a year before.

TRADE PRESS INTERNATIONAL CONGRESS.—The Syndicate of the French Technical Press (President: H. Mounier, 8 Rue de Miromesnil, Paris, 8e), is arranging an international congress of the trade and technical Press, to be held in Paris, from October 1st to October 4th next. An interesting programme reaches us, showing that the congress proposes to discuss a large variety of topics of vital importance to the trade and technical Press. The editorial, advertising and legal aspects of trade journalism will be discussed, and modern printing and publishing methods will not be overlooked, whilst much attention will be given to the question of the international co-ordination of the Press of all countries.

The Newspaper Trade Crisis.

Terms of Settlement.

The following official agreed statement was issued last Thursday announcing a settlement of the dispute in the newspaper trade:—

On Wednesday, at the offices of the Newspaper Proprietors' Association, a conference, which lasted several hours, took place between the Council of the Newspaper Proprietors' Association and the London Branch Committee of the Paper Workers' Union. With regard to the principle involved in the incidents which brought about the conference, an agreement was reached that in future promotions or appointments in all offices to such positions as those of publishers, overseers, deputy-overseers, travellers, inspectors, and depotmen shall be made by the managements.

Chapels shall have the right to submit the names of any of their members who, in their opinion, possess special claims or qualifications for any such contemplated promotions or appointments The decision of the management shall be final and not necessarily limited to members of the chapel.

The union gave an assurance that chapels shall refrain from unconstitutional action, and that matters in dispute with any chapel shall be referred to the trade union and the association.

The union, on the one hand, and the Newspaper Proprietors' Association, on the other, undertake that any decisions reached on any such reference under any of the provisions of the disputes clauses shall be loyally observed by both sides.

Oxford University Press

AND

UNION AND NON-UNION LABOUR.

Trouble has occurred in connection with the workpeople at the Wolvercote Paper Mill, near Oxford, of the Oxford University Press. The printing and other works are also affected by the dispute.

It appears that the officials of the National Union of Printing and Paper Workers aim to secure in paper mills and other establishments the employment of union labour only.

We understand the management has been approached on the question and the attitude taken up is that the matter is one that solely concerns the employees themselves and a strict neutral line has been taken.

It is hoped that some agreement will be come to by the parties concerned, but meanwhile notices to terminate employment tendered by the unionists on the ground of refusing to work with non-unionists have been accepted.

THE employees of the *Yorkshire Evening News*, to the number of nearly two hundred, visited Blackpool last week on their annual outing.

Personal.

MR. E. G. ARNOLD, principal of the Leeds printing firm of Messrs. E. J. Arnold and Son and an ex-president of the Federation of Master Printers, has been re-elected Pro-Chancellor of the University of Leeds.

AT the annual outing of the printing staff of Messrs. W. R. Cummins, Ltd., of Muswell Hill, to Hastings on Saturday last, a presentation of a barometer was made to the head of the firm, Mr. W. R. Cummins. The inscription thereon read "Presented to Mr. W. R. Cummins by the Editorial and Printing Staffs of the *Muswell Hill Record* on the occasion of the annual outing, June 27th, 1925."

MR. H. DAWES, the chief of the printing machine department of the *Yorkshire Post*, is retiring owing to ill-health after 30 years' service with that journal.

MR. J. T. ROBINSON, foreman of the printing department, and Mr. W. Payne, who has charge of the rotary machine department, of the *Hornsey Journal*, have been presented with gold watches on completing 38 and 30 years' service respectively.

MR. J. L. GARVIN, editor of the *Observer*, was the guest of honour at a dinner given on Sunday evening by the Irish Literary Society at the Florence Restaurant, Rupert-street, London, W.

COUNCILLOR R. I. CONSTANTINE has been elected a director of the *Accrington Gazette* in place of Councillor John Smith, who for some time has been chairman of the company.

MR. HORACE THOROGOOD, literary editor of the London *Star*, was married on Saturday at St. Mark's Church, St. John's Wood, to Miss Helen R. Macdonald ("Helen Hope," of the *Daily News*).

MR. M. STOBART, the news editor of the *Newcastle Chronicle* and associated papers, has been presented with a fishing rod and tackle on his retirement after 40 years' service.

MR. VICTOR J. BOURNE, of the literary staff of the *Daily News*, has been presented by the London staff with a canteen of stainless cutlery on the occasion of his marriage to Miss Robins, niece of Mrs. Cecil Chesterton.

IN the annual inter-firm bowling competition of the Norwich and District Printers held at Brundall on the green at Braydestone House, kindly lent by the Alliance President, Mr. F. S. Deyns Page, eleven firms entered for the competition, which was very keenly contested throughout. The following were left in for the semi-final—Mr. G. S. Hill's team (Norwich) *v.* Messrs. Wm. Clowes and Sons (Beccles), Messrs. Jarrold and Sons (Norwich) *v.* the London and Norwich Press (Norwich), and the final rested between Messrs. Wm. Clowes and Sons and Messrs. Jarrold and Sons, the latter winning by 13 to 3.

Presentation to Major Clowes.

Practical recognition was shown of the valuable services rendered to the London Master Printers' Association by Major Maurice Clowes, the new president of the Association, when on Tuesday afternoon a small company of master printers gathered in the L.M.P.A. Board Room, to make Major Clowes a present of a Queen Anne walnut writing table.

The presentation was made by Mr. George Berridge, who referred to the services Major Clowes had rendered to the L.M.P.A. and to the printing trade in general, particularly in respect of his chairmanship of the Labour Committee. He said that a number of them who were printers of weekly periodicals had felt that some recognition ought to be made of this unselfish and able work. A subscription list had accordingly been opened, and all the subscribers had written expressing in very high terms their esteem for Major Clowes and appreciation of his services. On their behalf he asked Major Clowes to accept this gift.

Major Clowes made suitable response, thanking Mr. Berridge for his activity in arranging the matter, and thanking the donors for the presentation, which, he said, he and Mrs. Clowes would always prize.

A vote of thanks to Mr. Berridge was passed on the motion of Mr. G. P. Reveirs.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

L. Senior and F. Uttley, 21, Morley-street, Bradford, as printers, bookbinders and stationers, under the style of Senior and Uttley.

F. W. Nelson and T. Bloor, paper and paper bag merchants, 155, Princess road, Manchester, under the style of Tom Nelson and Sons.

J. H. Todd, P. B. Todd, A. J. Todd and F. Todd, stationers and general merchants, 42, Silver-street, Lincoln, under the style of J. H. Todd and Sons; so far as regards A. J. Todd.

A. G. Law and J. S. Spelman, stationers, 1, Belgrave Mansions, near Victoria Station, under the style of Scotter and Law.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Wood, H., residing at 22, Bennett-street, and carrying on business at 287, Newport-road, Middlesbrough, York, stationer.

Taylor, J. B. (otherwise Arthur Ady), of 91, Burton-road, Brixton, London, and lately residing at 160, Kennington-park-road, London, and 5, Loughborough-road, Brixton, London, journalist.

THERE is to be a large attendance, including many Yorkshire printers and their customers, at the Special Printing Session of the British Advertising Convention which will be held in the Right Hand Promenade, Royal Hall, Harrogate, on Monday next, July 6th, 1925. The chair will be taken by Mr. Alfred Langley (chairman of the Collective Advertising Committee, Federation of Master Printers) at 2.30 p.m. prompt.

TWO GOOD THINGS FOR LITHO PRINTERS

"L. an B." (RODERZONE) ETCH for ZINC, ALUMINIUM 25/- per lb. Sample Ounce 2/6

RECEIVER APPOINTED OR RELEASED

WALBROOK AND CO., LTD. (printers, etc. London).—C. L. Davies, C.A., of 27, Clements-lane, E.C., was appointed receiver and manager by order of Court dated June 19th, 1925.

JOHN ALLEN AND SONS (IVYBRIDGE), LTD. (old company), (manufacturers of wood pulp, paper, etc.).—J. H. Stephens, of 6, Clements-lane, E.C.4, ceased to act as receiver or manager on June 18th, 1925, under his appointment under trust deed dated March 22nd, 1910.

Walbrook and Co., Ltd.

Winding-up Petition by John Dickinson and Co., Ltd.

A petition by John Dickinson and Co., Ltd., papermakers, to wind up Walbrook and Co., Ltd., was before Mr. Justice Eve, in the Companies Winding up Court on Tuesday.

Mr. Turner, for the petitioning creditors, said the shareholders of the respondent company had passed a resolution for a voluntary winding-up and there was a body of creditors opposing the petition whose debts were larger than those of the creditors supporting the petition.

Mr. Swords said he represented creditors opposing whose claims amounted to £4,200 and Mr. Turner was supported by creditors for about £1,000.

Mr. Beaumont said he appeared for the House Property Investment Co, who were landlords with another, and they had a judgment for £267 odd.

His Lordship: There is one large creditor, Mr. Henry Featherstone, for £3,128; he turns the scale; and there are three gentlemen for £262 10s. each: they are directors, I suppose.

Mr. Swords: Yes; and there are secured creditors as well who are opposed to the petition. They prefer a voluntary winding-up.

Counsel, in reply to the judge, said the company had a large printing business.

His Lordship: Who is Mr. Featherstone?

Mr. Swords: A paper merchant. He had supplied paper to the value of £2,000. Counsel added that he would offer, on behalf of the unsecured creditors he represented, that they would postpone their debts to those of the other unsecured creditors if a voluntary winding-up were allowed to proceed.

Mr. Turner: Including Mr. Featherstone?

Mr. Swords: Yes, in regard to his unsecured debt; his secured debt would not be postponed. I make that offer on behalf of Mr. Featherstone and other creditors and also for the three directors.

His Lordship: That is a valuable offer, Mr. Turner. Creditors for about £4,000 offer to postpone their unsecured debts to yours if you do not press for an order.

Mr. Turner: I would be unreasonable not to accept that offer.

His Lordship: Then there will be no order on the petition, except that the company pay the petitioners' costs.

The Blue Book.

The Blue Book, the latest sample book issued by Messrs. Allardyce and Co., Ltd., paper merchants and wholesale stationers of 85, Southwark-street, S.E., should be in the hands of every printer. It is a complete compendium of its kind, containing over 200 samples of every grade of paper, and the clearly printed specimens show every substance in all the qualities stocked. The volume is strongly bound in blue cloth and thus becomes a work of lasting value. Particular attention has been paid to means of ready reference to any particular paper, and the comprehensive cross-indexing ensures the instant finding of what is required. A separate price list deals with the firm's well-known billhead series, and samples of each quality including the Standard Billhead are included. The firm guarantees prompt delivery, a strong point in these days of acute competition. The Blue Book adds another to the many services rendered to the trade during its long service by this enterprising firm and a copy will be sent upon request.

MESSRS. JOHN SHAW AND SONS, of Honley near Huddersfield, send us a copy of a new catalogue of the pen ruling machines for which their name is well known. A series of illustrations first conveys an idea of the extensive Shaw factory, and particulars are given of the equipment and staffing required for the production of the high-class machines there manufactured. There follow full illustrated particulars of the various ruling machines, also of the "Bailey" patent rotary perforator attachment, the manifold double shaft pen underlift device, the patent pile suction feeder, etc. Prices are included. In a note on another page, mention is made of the offset printing of this well-produced catalogue.

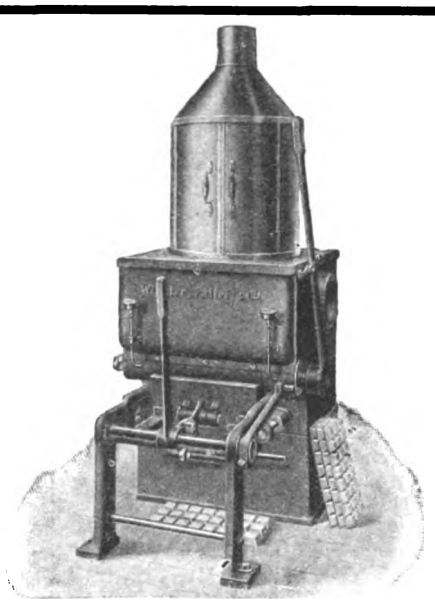
NO ORDERS TOO LARGE AND NONE TOO SMALL.

"WINKLER" Automatic Moulding & Drying Press

FOR FINE ART AND NEWSPAPER MOULDS



Dry and/or Wet Flong, Hot or Cold, with Electric or Steam Heating.

Equals in capacity THREE Pneumatic Presses.
The Matrix is moulded and dried in one operation, the drying taking place under reduced pressure (patent).
The Moisture is extracted by a suction pump.
Automatic Temperature Control and Time Switch.

¶ Produces, in conjunction with Light's "Photo Tone" Fine Art Flong, Half Tone Matrices of finest screen so accurate that Stereos cast therefrom are facsimile to originals.

¶ Perfectly even pressure throughout the surface of the platen is absolutely guaranteed, in contradistinction to all stereo presses operated pneumatically, hydraulically, or by hand power, which have centrally actuated platens inevitably more or less deficient in equality of pressure.

¶ Saves Type, Time, Labour, Power and Fuel.

The "WINKLER" Automatic Ingot Caster

will substantially cut down your loss in dross and your bill for renovating metal.

The Metal is Drawn from Bottom of Pot, which is directly connected with the ingot moulds. Consequently only the clean metal is cast under the weight of the metal in the pot

The Surface of the Metal is Kept in a Non-Oxidizing Atmosphere, which prevents the formation of dross

No Unhealthy Fumes from the Metal, these being carried off through the flue.

Automatic Metal Mixing. When the metal flows into the moulds the air escapes through the metal in the pot, thereby acting as a natural stirrer.

"Surface Combustion" Gas Burners, giving uniform furnace temperature and minimum gas consumption. Radiant heating from refractory bed on which correct mixture of air and gas burns completely.

Trade Notes.

UNITED NEWSPAPERS OFFER.—At the week-end subscriptions were invited at par for 550,000 7½ per cent. cumulative preference £1 shares, hitherto privately held, of United Newspapers (1918), Ltd. The prospectus shows that the average profits of this company, which owns the *Daily Chronicle* and the *Sunday News*, amounted to £176,309 for the five years ended December, 1924. Dividend on the whole of the preference shares requires £45,937 per annum, so that the dividend is covered three and a half times on that basis. The shares now offered carry the right to dividend as from June 15th, 1925, and the first payment will be made on December 31st next. Net assets are valued at £920,000.

THE subscription lists in connection with the offer of cumulative preference shares in United Newspapers (1918), Ltd., were closed at midday on Tuesday, the offer having been over-subscribed.

MR. EDWIN W. EVANS, of 150, Fleet-street, E.C.4, announces the opening of sale rooms at 1–4, Red Lion passage, Fleet-street. This will, he believes, supply a long-felt want amongst the trade generally, especially those desiring to dispose of surplus plant and machinery at the best market price, with a minimum of trouble and expense. Sales by auction will be held at least every other month. Terms and conditions will be forwarded on application.

MR. J. LOWNDES, printer, bookseller, etc., of 26, High-street, Cheadle, Staffs, has for personal reasons suspended the publication of *Cheadle and Tean Times*, though he will continue his general printing business.

THE annual meeting of the West of England and South Wales Monotype Users' Association was held at Bristol on Monday, when the members were entertained to lunch by the Lanston Monotype Corporation, Mr. W. I. Burch, managing director, presiding.

IN furtherance of the organisation of the Joint Industrial Council, a very successful meeting was held on Saturday at Newport, Isle of Wight. The chair was taken by Capt. McDonald, the local Member of Parliament, who expressed his pleasure at assisting a movement that had been so successful in promoting industrial peace. Mr. Yates explained the origin of the meeting, Mr. A. E. Goodwin gave a review of the objects and work of the J.I.C., and Mr. A. E. Holmes followed with special reference to the utility of the J.I.C. in settling disputes. It was unanimously decided to form a District Committee, and the officers were elected. Mr. P. D. Michael proposed a comprehensive vote of thanks to the chairman, the speakers and to Mr. and Mrs. Blake, who entertained the company at a garden party prior to the meeting.

TWO MEN who recently assaulted Mr. G. T. Bevan, chairman of the National Society of Operative Printers and Assistants, were each fined 20s. and £4 costs, at Mansion House Police Court, on Thursday, the case being dealt with by Alderman Sir Geo. Truscott. The magistrate said that the men had probably mistaken the prosecutor for someone else, but they had committed an assault, and must be punished. The men were Alfred Young, a motor driver, of New Kent road, S.E., and Walter O'Reilly, a labourer, of Walworth.

THE death has occurred of Mr. Charles Heath Lemon, who was for 30 years the Newcastle representative for Messrs. Hudson and Kearns, Ltd., stationers and printers, London.

MR. JOHN SAMPSON, M.I.C.E., of Westminster, S.W., and Folkestone, for some years consulting engineer to *The Times*, who died on May 11th, aged 65, left a fortune of £75,412, with net personalty £66,567.

IMPERIAL PRESS CONFERENCE. — In the Harcourt Room of the House of Commons on Wednesday of last week a luncheon was given by the Parliamentary members of the British delegation to the third Imperial Press Conference to their colleagues and a number of Dominion representatives and members of the Imperial Government. Mr. Amery, Secretary for the Dominions, proposed the toast of the day, characterising the delegation as the strongest and most representative that had ever been sent abroad in the name of British journalism. Viscount Burnham replied for the delegation. The delegation, which will include the Rt. Hon. C. W. Bowerman, M.P., sails for Quebec, *en route* for Australia, *via* the Canadian Pacific Railway to Vancouver and New Zealand, on July 11th.

London School's Exhibition.

There are many interesting things to be seen at the exhibition of students' work now being held at the London School of Printing, Stamford street, S.E. Exhibits include competitive items as well as examples of the ordinary work of the session. The exhibition remains open to day (Thursday) and to-morrow, 9 a.m. to 5 p.m.

In the composing section is an intriguing array of letterheads comprising some scores of variant settings of the same "copy." Advertising matter is strongly represented amongst the other letterpress printing shown. Posters, hand bills, newspaper advertisements, folders, etc., show good features of design and execution, and the inclusion of lay-outs gives additional interest. Book work is not overlooked, some beautiful pages, both plain and illustrated, being displayed to exemplify printing of the less ephemeral type. Creditable machining is indicated, platen work being specially well represented. In respect of illustrations, lithography is to the fore, the School's photo-litho offset being excellent. Both monochrome and colour are well exemplified.

Thoroughly practical stereotyping and electrotyping methods are taught in the School, as is indicated by exhibits of matts and casts, nickel-faced stereos, wax moulds and electros, etc. Examples of repairs to half-tone electros illustrate a useful subsidiary line of work, whilst another line of real practical value is seen in specimens of surface metal engravings.

A compact exhibit of bookbinding specimens is remarkably comprehensive. Stationery bindings in various styles, including loose-leaf, are shown alongside a good range of letterpress bindings, not omitting fine work with gold tooling, inlaying and gilt edges. Attractive and varied examples of marbling are a notable addition.

The London School of Printing is not a school of art, and the artists' work that adds such attraction to the craft exhibits of some other technical training institutions may be missed by some visitors. The exhibition, however, bears strong evidence of the very practical workshop character given at the London School, whose first interest is to prepare its students for the every-day work of the trade.

MESSRS. H. WILLIAMS AND CO, Red Lion Works, Warner-street, Clerkenwell, announce a big price reduction in electro, stereo, and photo engravers' plant. Their new 15 in. model edge planing machine, for instance, is specially offered complete and ready for running at £33, which is stated to be less than the pre-war price. It is interesting to note that this firm made the first edge planer and designed the first pedestal machine in this country, and over five hundred have been sold.

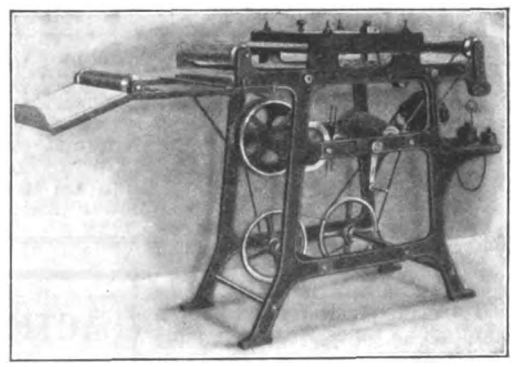
THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER



the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

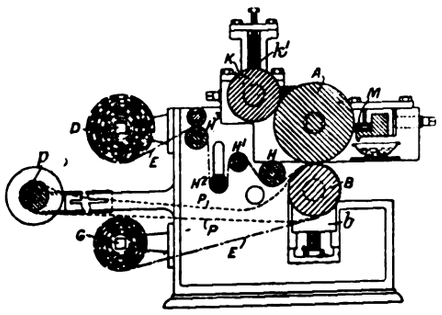
New Inventions

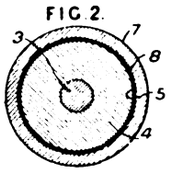
Casting Stereotypes.



In a machine for casting stereotype, of the kind in which the casting box is adapted to be pressed against the discharge opening of the melting pot, the box, and the mechanism for opening and closing the box and the discharge aperture of the pot, are adapted to be carried by the furnace walls. As shown, the

casting box *c* is mounted on cross rods *b*, *b*¹ mounted in an extension of the furnace walls, and a bracket *e* is provided to support the driving mechanism *d*. The movements of the box are controlled by the shaft *f*, cranks *g*, *h*, and connecting rods *i*, and the opening of the outlet of the pot is obtained from a shaft *k* through the medium of a link *l*. The patentee is Mr. C. Winkler.

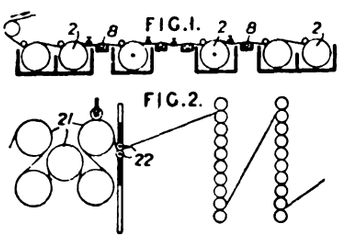
Web Printing Machines.



An apparatus for printing paper, fabrics, etc., by the process described in Specification 134,284, and patented by Mr. J. M. Cooper, is constructed with a plain metal roller A which receives its colour direct from a duct formed between it and an adjustable roller K driven at a different speed from the roller A and fitted with a scraper k¹. The web E to be printed is fed from a roll D over guide rails or rollers H . . H⁸, some of which may be scrimp rails to tension the web laterally and remove creases, and the web passes over about three-quarters of the periphery of the design-carrying roller B and is wound up on a roller driven by a slip pulley and band from the roller B. The design may be fixed to the roller B, or it may be carried by an endless flexible band

P mounted around an adjustably mounted roller p fitted with inclined flanges, and the band is kept slack so as to rest centrally on the flanges. The pattern itself if of lace may be passed over the roller p without a supporting band. The roller B is adjustable by screws or eccentrics, and a scraper M is used on roller A to remove fluff and superfluous ink. A second impression roller may be arranged to print a reverse design on a second web, this roller being arranged to take up from the roller A the pattern which remains on it after the web E has been printed. In a modification of the inking apparatus the roller K is replaced by an adjustable plate which may be fitted with a celluloid plate to bear on the roller A. The roller A may also be inked by reciprocating distributing rollers which receive their supply from a duct away from the cylinder A, and a reciprocating distributing roller may be arranged on the cylinder A behind the printing position. The cylinder B may be an engraved cylinder and may print a duplex impression on the back of the web. According to the Provisional Specification the roller A may receive stripes of different colours so as to give multicolour impressions.

Inking Apparatus.



An invention patented by Mr. W. C. Hart relates to inking rollers of the kind provided with a renewable surface layer of printer's roller composition; and consists in the provision of a moisture-proof covering for the core and means for preventing adhesion of

the outer layer to this covering. As shown, the shaft 3 carries a core 4 of printer's roller composition covered with waterproof material 5. To facilitate the removal of the surface layer 7, of printer's roller composition, when this is to be renewed, a fabric backing 8 is interposed between the layers 5, 7. Specification 18189/07 is referred to.

Paper Boards.

In the manufacture of box-board, container-board, and like paper products formed in plies on the paper machine, an emulsion, such as is described in Specification 151,029, and preferably of a non-adhesive character is suggested by L. Kirschbraun to be applied by rolls (8) to the plies as they are formed by the moulds (2). The combined sheet passes to the dryers (21), the last of which may be cooled and then to the calenders. Some of the emulsion may be incorporated with the

pulp, and the application of the emulsion between some of the plies may be omitted. The rolls (8) may be duplicated to allow for cleaning during the operation of the machine. The emulsion may contain asphalt, animal, mineral, and vegetable pitches, resins, paraffin, and analogous water-proofing materials, or a grease repellent material may be used. Pressure rolls (22) are adjustable in order to maintain uniform tension between the upper and lower plies.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

(Continued from page 3).

Costing as Applied to Lithography.

necessitate the purchase of more stones or more plates, and these purchases would be added to the capital account. Plates have a tendency to break at the bend. They may be used for smaller machines or originals, but their value as working plates has gone. Therefore, they should be looked upon as an expense against the department, and recovered through the rates.

What the Costing System is Doing.

A few months ago I went into a certain district and examined the figures of a firm. I suggested rates for the different operations, which included a litho section, and compared these rates with the rates that had been in use by the firm. There was a difference in almost every section. As a result of this investigation the firm, who had been doing work for a certain customer for the last six years, put in an estimate of £400 more than the one put in the year before, and secured the order.

Small Litho Departments Not Paying.

My experience has been that wherever there is a small litho section attached to a business that section of the business is not being run on a profit-making basis, and you can, by means of the Federation system, find whether these departments are paying or not.

If any section is not pulling its weight, then every loss in that particular section has to be borne by another, and my experience is that there are few firms without a costing system who are able to do this separating.

Instantaneous Benefit.

One of my assistants persuaded a mixed business house to instal the Federation Costing System. This firm for many years had only made ends meet. What happened? As a result of the investigation it was proved conclusively that one side was making a profit of hundreds a year. The balance sheet had shown little profit, and in some cases a loss. It was proved that a profit was made in one section of the business, and it was every bit lost in the other. The two illustrations given to you have been brought to notice in the initial stages of the use of the costing system.

Difficulties not Insurmountable.

It is possible by applying the system to overcome the difficulties that arise from time to time. The system is not brought to your business and your business shoved into it—the system is brought and fitted on to it. The peculiarities of your establishment are recognised and treated, and it is your own cost that the Federation system finds, not the cost of your competitor in the next street. Another point I want to emphasise is that whatever the costing system finds to be your costs, it does not follow that you have to charge it. That is to say, if after investigation it is found—I will exaggerate for the sake of illustration—that a double demy rotary litho machine costs £1 an hour where it ought to be 10s., no costing system is going to make you charge £1. We all know what would happen.

Value of Correct Costing.

But the idea I want to get into the minds of the printers of this country is that the value of the costing system is not chiefly that of finding a cost to be passed on to the customer. No costing system is functioning unless it is probing into the cause of the cost that makes up the various rates and until it sets about reducing costs.

Value of a Uniform System.

Unless a costing system is in universal use, how are you going to find out whether your factories work efficiently or not? How did you know ten or twelve years ago, before the system was introduced? Some of you agree and some disagree about the value of the standard hourly rate, but this hourly rate could not have been published without the introduction of a standard system, and so it is not so much passing on the cost to the customer, but finding out what your own cost is and comparing it with the standard rate to find whether your factory is worked on economical lines, and whether the rate you find is somewhere round about that of the average figure.

Keep to the Standard.

You cannot do this unless you apply the standard system as it is laid down, and I am going to appeal to you to keep to the book. The standard system must be applied in a standard way. I am appealing now that if there are any firms who have not applied the system they will consider it very seriously.

Government Contracts.

Contracts were placed with the following firms during May :—

H.M. Stationery Office.

Service

PROGRESS SERIES: No. 6.

In 1848 when the House of Winstone was founded, almost fifty years before the petrol engine took its place on the roads of the world, deliveries were slow and uncertain. It requires little imagination to picture modern business without motor transport, to carry goods from point to point quickly and economically.

SERVICE is the life-blood of modern business—revitalising the worn tissues of trade. Service produces the food you eat, the clothes you wear, the wireless you hear, the magazine you read; without it industries would languish into stagnation.

Since the days of the push-cart, seventy-seven years ago, the house of Winstone have built up the structure of their organisation on Service, meeting the printers' every requirement in Inks, Rollers, Sundries and Specialities—promptly, efficiently.

This Service ideal is maintained in every department from their Advisory Board of Specialists, who give advice on any printing problem, to their fast delivery system which operates a fleet of motors to all points within a reasonable radius of London.

The Standardisation of Paper.

Views of Master Printers on a Matter of Current Interest.

The long-drawn-out efforts of a few progressive spirits in the printing trade to apply common sense to the methods of dealing in paper, appear at last to be on the eve of achieving a substantial measure of success. Discussions on the subject between the Federation of Master Printers and the National Association of Wholesale Stationers led to the drawing up of a scheme of reform, and we understand that after further recent discussion the Wholesale Stationers at a meeting on Thursday last agreed to the principles of this scheme.

It will be remembered that at the recent Cost Congress of the Federation of Master Printers the scheme was explained and discussed, and it may be of interest to report that explanation and discussion more fully than we were able to do at the time.

Mr. Howard Hazell, who introduced the subject, said: The standardisation of paper may seem to some to be ancient history, but it takes time to make history in the printing trade. It has been said that large bodies move slowly, and, if that statement be true, the papermakers and paper dealers must be very large bodies indeed. But at last we have secured a measure of agreement.

A Basis of 1,000 Sheets.

The proposal is that we should abandon packages containing a variable number of sheets, and buy and sell our product on the basis of 1,000 sheets. It has always seemed to me to be illogical that we sell our product per thousand sheets, but obtain our raw material in packages which may contain 480 or 472 sheets, and if neither of those is the correct number it is sure to be 500, 504, 508, 512, or 516. The time has come when we should take control of our industry and standardise our methods. We have had our type standardised for us by the type-founders. I believe we shall obtain almost equal advantages when we have reformed our methods of dealing with paper and have standardised our packages and sizes.

One of the greater drawbacks of the present method is that in our estimates we calculate in reams for the quantity of paper used and the quotation to the customer is in thousands. Is there any master printer who can lay his hand upon his heart and say never in the whole course of my career have I confused reams and thousands? If the reams had been calculated in thousands we should not have given that paper and machining to the customer. That is one of the great advantages of the new system.

Overs and Ream Breakage.

The argument has been used against this suggestion that we want a certain amount of overs. Those who have been present at the many meetings of master printers when the correct number of overs in a ream has been discussed will realise that it is impossible to get any form of agreement at all. There is a job for 500 copies, printed on one side in one colour—a common job; 504 sheets would probably be sufficient to give the overs. The next time that paper is used it may be for 1,000 copies of a bill for a church bazaar in two colours, with the last page a perforated subscription form, and bound, folded, and wire-stitched; 504 sheets will not be enough, and 12 or 16 overs will be required. The problem is still further complicated, because the papermaker may supply in 516, 512, or 480 sheets. That at once introduces into the complicated and intricate calculations of the printing trade a whole series of possible errors which could be overcome by standard methods and calculations based on 1,000 sheets.

It has been said that if we have 1,000 sheets as the basis it will always mean breaking reams in order to get the necessary overs. I looked into the amount of breaking reams under the present method in the jobbing section of our business, and found that in nine out of ten jobs it was necessary to break the reams. If that be the case, is it not very much simpler to have 1,000 sheets as the basis, in packages of 1,000, 500, 250, or 100, or whatever number is suitable? Already paper for letter-copying books is packed in thousands, and large sizes of paper in 250's with the usual overs. How many sheets there are in the package is a question of convenience and arrangement between the papermaker and the printer, but the whole contention of the Costing Committee is that we want 1,000 sheets as the basis for all price lists and calculations.

I think it will be found of great advantage to set up certain standards for overs. Such standards have been in force for many years in H.M. Stationery Office, and the principle is to allow a certain percentage of overs for each process, so that the exact number of sheets to give out is known. For 1,000 runs of a simple job 1 per cent. of overs may be given; if in two colours, 2 per cent.; if wire-stitched and bound, 3 per cent. Standards would be set to give a sufficient number of copies to make the perfect thousand the customer desires.

Decimal Calculation.

There is another great advantage in having a thousand as the basis, because we begin to touch on the fringe of the many advantages of decimal calculation. I am sure that one day—it may be a distant day—we shall decimalise our monetary system and all our methods of calculation, but we master printers who in many ways have been in the van of progress in industrial matters may still maintain that position by introducing decimal calculation into our dealings in paper. Not only is it of advantage in calculating the percentage of overs required, but the calculation of the price of 1, 10, or 100 sheets is immensely simplified. If 1,000 sheets is adopted as the basis, no calculating system will be necessary, and we shall not have to deal with reams of an unknown number of sheets, with quires and with sheets. It will merely be necessary to turn the price of 1,000 sheets into shillings or pence, and shift the decimal point to obtain the price of 100, 10, or 1 sheet.

It is an extraordinary thing that when we come to thicker paper it is not sold in reams but in a remarkable package containing 144 sheets. This method of packing, like all the other methods of dealing with paper, is buried in a dim and hoary past. Paper was handmade when it was first produced, in the fourteenth century, and I imagine that since then there have been no changes in the method of packing. We therefore suggest that in this early part of the twentieth century the time has come to revise our methods, and that when paper becomes a little thicker and is called a card or board it should still be sold on the decimal system, but per 100, as that is a convenient number, or per 1,000, if the wholesale stationers prefer that number, and packed in 50's or 100's, as may be found convenient.

Nomenclature and Size.

Another extraordinary anomaly is that papers are usually sold by names as peculiar as many of the other things in the paper trade — Pott, Foolscap, Post, Demy, and Medium. All we desire is that those names, which we cannot change, should represent a definite size throughout the trade. I am not sure that all the wholesale stationers themselves know the sizes of the papers they sell; it is certainly disconcerting to a master printer to work out calculations on foolscap or demy, and then find that the paper when delivered is a quarter-of-an-inch or half-an-inch different from the sizes on which he has calculated. Therefore we have jointly prepared a series of sizes for boards and paper, that these may be the universal standard sizes for a paper when it has a name, and that the printer may go to any wholesale stationer or papermaker and know to an eighth of an inch the size that will be delivered. This does not mean that other sizes must not be used, but if a paper is larger or smaller than the standard size it would not be sold by one of the standard names, but by inches. Thus some of the errors that occur at the present time would be eliminated. In America they have for a long time used the system of selling by inches,

and they have no names, but in this country the name principle is so interwoven in the printing trade that we came to the conclusion that it would be impossible to alter it.

Stationery Office Scheme.

We have another advocate on our side, H.M. Stationery Office, the largest buyer of paper in this country outside a few of the big newspaper offices. The Controller told me that a committee of investigation had been considering the question for a long time, and that it was his own scheme and idea and the committee had worked it all out. It is evident that great minds think alike, for his scheme is our scheme, or his committee of experts have evolved a scheme which is on lines identical with ours. They have abandoned the 480 sheet ream from April 1st, and have adopted the 500-sheet ream. I asked him why he did not go the whole hog and adopt 1,000 sheets, and he said he supposed they would get there some day. They have at any rate adopted the decimal method in all their dealings. They have standardised sizes and colours, and the result has been an enormous reduction in the varieties of papers they have to buy and stock. That is one of the advantages of standardisation.

Saving Secured.

The elimination of variable sizes and different numbers of sheets will cause work to be concentrated on certain classes of paper. If we reduce the variety of stocks we keep, the wholesale stationer will have to meet our requirements and the papermaker will manufacture accordingly. If the costs of management and the heavy capital charges for a variety of stocks are reduced, the cost of our raw material will also be reduced.

The Voice of the Industry.

I believe that standardisation will be of very great advantage to the whole of the printing industry. Over 1,000 master printers have signed the statement that they are strongly in favour of this scheme of standardisation, and when it is officially adopted they are prepared, other circumstances being equal, to place their orders with the stationers and papermakers who adopt the standards.

Mr. W. J. Pollock was certain the change would be just as efficacious in a large office as in a small one. He had spent some years in America, and had been impressed with the great advantage of decimal calculation. He had recently been permitted to speak before the Technical Section of the Papermakers' Association of Great Britain, and he had suggested to them that the time had come to cut down the number of shades and qualities. They had considered it, and he believed there would be a further conference between them and the wholesalers. The question had also been considered by H.M. Stationery Office, who had already reduced the number of shades and qualities by about 40 per cent. If this could be carried out in the industry generally it would enable stocks and capital to be reduced, thus cheapening the cost of the product to the public without cost or loss to the industry.

Mr. Hazell stated that he had been informed that 40 per cent. of the members in London had signed the standardisation statement. So far as publishers were concerned, he presumed they would continue to supply overs on the basis of 32 sheets to 1,000 sheets, as that number had been found necessary for book printing. On the other hand, if they ordered in 500's they would need to continue to supply 3

per cent. for overs. The committee was endeavouring only to standardise existing methods of dealing with papers bought on the open market.

Discussion.

Mr. Chatterton asked why Imperial paper (22 in. by 30 in.) should be a different size from Imperial boards (22 in. by 32 in.) on the schedule submitted.

Mr. Hazell said the wholesale stationers had urged that the boards should be of the size stated, so that customers could cut out certain sizes. They were not endeavouring to make drastic changes, but only to standardise average sizes. If boards were cut down to the size of paper there would be an outcry.

In reply to suggestions made that different names should be adopted, and that "Great" or "Small" should be prefixed to "Imperial" in one case, Mr. Hazell said experience showed that it was difficult to alter names of articles in commerce. France had decimalised her methods in the time of Napoleon, but even to-day the change was not complete. If the name were altered from Imperial to Empire, some printers would use the new term while others would continue to use the old one, and the papermakers would be further confused.

Mr. T. M. Appleyard said it had been possible to cut thirty-two postcards out of a postal board, but a new size would be required to enable the new size of postcard to be cut without waste.

Mr. Hazell said that was a valuable suggestion, and the committee would see that such a size was put in the list under a new name.

Mr. J. R. Burt thought that all progressive papermakers would remake their reams at once, and that if the desirability of so doing was put before them it would be of considerable help to the printer.

Mr. Hazell said one of the largest firms of papermakers in the country was about to spend a large sum in preparing a list of certain classes of paper, and they had asked whether they should adopt standardised methods or continue to give prices per ream. If the committee could deal with the matter at once the new lists would be issued on the 1,000 basis.

A member urged that the printers of to-day should make the sacrifice of eliminating the difference in size between Imperial boards and Imperial paper, instead of leaving the next generation to grapple with the difficulty.

Mr. G. F. Storey said a distinction had already been made by introducing the terms Small Demy, Small Medium and Small Royal on the writings side, as against Demy, Medium and Royal on the printings side. Why not make the same distinction in regard to Imperial, and call one size Small Imperial?

Lieut.-Colonel W. H. Barrell strongly supported the proposal of standardisation. Printers in the provinces had to hold stocks four times as large as those in London, and the change would be invaluable to them in enabling them to reduce their capital expenditure.

Mr. Clark urged that, as stocks of certain papers were held over a number of years, packages should have marked on them the number of sheets, etc., to facilitate the work of the warehouseman.

Mr. Hazell said the proposed conditions were that all packages should be marked to show the quality, size in inches, substance, and number of sheets.

Mr. J. A. Stembridge asked that the size Medium (18 in. by 23 in.) should be inserted under the "writings" list as well as in "printings" list, because in making manifold books Small Medium (17½ in. by 22 in.) would not allow sufficient binding room.

Mr. E. T. Northend supported this view, and the chairman agreed that it was desirable that the alteration should be made.

Mr. H. Rankin asked whether it was the intention that cover papers should be the same size as printing papers, or ½ inch larger, as had been the custom.

Mr. Hazell said cover papers would naturally be larger than the book, and they would be stocked in any size desired; but they would be sold by inches and not under the standard name if they were larger.

Mr. R. G. Evans asked whether it was proposed that there should be a charge for breakage on quantities under one ream.

Mr. Hazell said the basis of buying and selling would be 1,000 sheets. The number of sheets per ream would remain 500, if that was found to be a convenient number, but 60 by 40 paper was already packed in 250's or half-reams. Packages would contain 500 or 250 sheets or 100 in the case of cards, and it was not proposed to alter the principle of packing.

Mr. C. H. Gee said that if names of papers would represent constant sizes it would be unnecessary to retain the titles "Writings" and "Printings" to cover certain names.

Stationers' Company Examinations.

WHY YOU SHOULD USE TYPON

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON requires no oiling or special treatment in developing; highly skilled labour is therefore not required.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase. Typon material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass- think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON adds to the resources of the Litho and Planographic Printer and reduces his working costs.

TYPON PAPER NEGATIVES

SOLVE your photo-reproduction problems for you!

They are cheaper, quicker, easier to handle, and better in every way than any other method.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

UNITED NEWSPAPERS (1918), LTD.—In respect of the very heavy over-subscription for the shares offered in United Newspapers (1918), Ltd., it is announced that the general public will receive 25 per cent. of their applications; readers of the *Daily Chronicle* and its allied newspapers will receive between 50 per cent. and 75 per cent. of the amounts applied for.

KELLY'S DIRECTORIES.—The 28th annual meeting of Kelly's Directories, Ltd., was held last week at the company's offices, 186, Strand, W.C., Sir William E. Berry, Bart., chairman of the company, presiding. The report and accounts were adopted, confirming the payment of a final dividend of 7½ per cent. on the ordinary shares, plus a bonus of 5 per cent. This brings the yield on the ordinary shares up to 17½ per cent. for the year, and leaves the sum of £58,468 to be carried forward, as against £45,345 brought in from last year's accounts.

THE *Dorset Daily Echo*, which is published by the *Hampshire Advertiser and Echo*, Ltd., has recently opened new offices at St. Thomas-street, Weymouth.

SWEEPSTAKE FINES.—The National Union of Commercial Travellers' Derby sweepstake was the subject of proceedings at Bow-street Police-court last week, when Arthur George Field, of Rugby-chambers, Chapel-street, W.C., was summoned for issuing a scheme for the sale of chances in a lottery, and Cecil James Kebbell, of the same address, and William Albert Woodroffe, manager of the 20th Century Press, Ltd., of Southwark-street, S.E., the printers of the tickets, were summoned for aiding and abetting him. The magistrate, Mr. Leycester, said the law must be obeyed, but there was really no moral turpitude in offences of this kind, and he should not have thought it necessary to fine the defendants had it not been that they went on with the scheme after they were warned. As it was they would each be fined £9, with £1 costs.

PRINTERS SUBSCRIBE.—The local subscription towards the fund for next year's Royal Agricultural Show, which is to be held at Reading, include the following: Viscount Hambledon, £100; Viscount Burnham, £50; Messrs. Knill and Sons, printers, Reading, £5 5s.; Messrs. Greenslade and Co., printers, Reading, £5 5s.; Messrs. Bradley and Sons, printers, Reading, £5 5s.; Mr. H. W. Pountney, £2 2s.; Messrs. R. Poynder and Sons, printers, Reading, £2 2s.; and Mr. H. T. Morley, printer, Reading, £1 1s.

SOME fine exhibits of design and craftsmanship in advertising are shown in the public library and art gallery at Victoria-avenue, Harrogate, coincident with the holding of the British Advertising Convention. Work has been contributed from all parts.

EXAMPLES of the work done in the day continuation classes held in Edinburgh in connection with the printing and kindred trades, have been gathered together in the College of Art. They represent the work of the session 1924-1925, and include examples of machine work, including two, three, and four-colour process work, which show what may be done in the way of reproducing the masterpieces of art; compositors' work, stereotyping and lithographic work. The last-named section embraces poster designs, designs taken from work done in the classes held in the College of Art, and photo process work for fine book illustrations.

A PARTY of employees from Messrs. Eyre and Spottiswoode's, Shacklewell, E., paid a visit to the Caxton Home, Limpsfield, on Saturday last. Favoured with fine weather, the motor drive to the Home was a most enjoyable one. Tea was provided in the dining hall, under the presidency of Mr. W. F. France, J.P., after which the party spent an enjoyable evening in the gardens and grounds, returning to Dalston about eleven o'clock.

MAJOR J. W. H. THOMPSON, chairman of directors of the *South Essex Recorder*, Ltd., speaking at the annual wayzgoose of the staff, said that he hoped that before the end of the year it would be possible to place a profit-sharing scheme before the employees.

THE National Federation of Newsagents has taken exception to the selling price of one halfpenny fixed for the Bedford and District *Daily Circular*, a new evening newspaper.

AMONG the papers read at the annual conference of the Museums' Association, held at Exeter this week, was one on ink and paper for museum labels by Mr. R. T. Jackson, of Peterborough, U.S.A.

LEEDS PRINTERS' SPORTS GALA.—At the annual sports gala of the Leeds and District Printing Trades, to be held at the Headingly (Leeds) Athletic Grounds on Saturday next, 25 events are down for decision, with prizes to the value of over £100.

THE Printers' Managers and Overseers' Association has lost a popular and useful member by the death, after a long illness, of Mr. J. J. Smith.

COLONEL R. J. MACHUGH, author and war correspondent, died on Monday at the age of 61. He was best known as a war correspondent for the *Daily Telegraph*.

MR. WILLIAM MUDFORD, formerly a member of *The Times* staff, died suddenly on Friday evening at the dinner of the Ramsay Memorial Fellowship Trust at University College. He was attending the dinner as the representative of the *Morning Post*, and while seated in the hall had a seizure. Mr. Mudford, who was about 60 years of age, was the son of the editor and proprietor of the *Kentish Gazette*, and he was a nephew of William Mudford, the famous editor of the old *Morning Standard*.

THE death occurred last week-end at Newcastle-on-Tyne, of Mr. Charles W. Richardson, the gifted Tees-side artist, who had been connected for nearly 40 years with Messrs. Jordison, printers and engravers, Middlesborough. He was at one time Master of the Cleveland Printers' Guild.

A FORTUNE of £2,222,471 has been left by the late Sir Edward Hulton, newspaper proprietor. Duties on the property will amount to £902,500.

MR. PERCY LIVINGSTONE PARKER, of St. Leonards, and of Essex-street, Strand, W.C., editor and proprietor of *Public Opinion*, left £40,810.

MR. JAMES HARWOOD, of Derby, printer and stationer, left £54,375.

MR. FREDERICK LLOYD, of Princess-street, Chester, printer, left £9,133 (net personalty, £5,509).

MR. THOMAS HEATH JOYCE (74), of Southsea, Hants, and of Freshford, Somerset, formerly editor of the *Graphic* and of the *Daily Graphic*, left £9,690 (net personalty £8,720).

YORKSHIRE NEWSPAPER SOCIETY.—At the annual meeting of the Yorkshire Newspaper Society, at Dewsbury, on Saturday, Mr. Richard Stapleton (*Dewsbury Reporter*) was elected president, Mr. A. L. Woodhead (*Huddersfield Examiner*), vice-president, Mr. A. M. Wisely (*York Herald*) secretary and treasurer, with the following executive committee for weekly newspapers: Messrs. R. A. Brear (*Harrogate Herald*), J. T. Clayton (*Craven Herald*), J. Dickenson (*Rotherham Advertiser*), T. Patebett (*Armley and Wortley News*), R. Stapleton (*Dewsbury Reporter*), R. Roberts (*Batley News*), J. H. R. Renwick (*Wharfedale Observer*), C. H. Robinson (*Wakefield Express*), W. P. Turner (*Mexborough Times*), and H. Warren (*Doncaster Gazette*).

THE annual conference of the Institute of Journalists is to be held this year at Cambridge from August 24th to August 28th.

THE *Christchurch Times*, which owing to war-time difficulties was suspended in April, 1918, has been restarted under the managing editorship of Mr. Charles T. Curry, M.B.E., lately editor of the *Buckingham Advertiser*, and formerly of the literary staff of the *Daily Express*.

THE fifth birthday of *Time and Tide*—edited by Miss Rebecca West and run by an all-women staff—was celebrated by a dinner at the Hyde Park Hotel, on Friday. Lord Riddell was amongst the many prominent people attending.

TO MARK the 75th anniversary of the *Shields Daily Gazette*, a special supplement was published with the issue of Thursday, containing articles describing its growth.

THE Quebec *Morning Chronicle* and the *Evening Telegraph*, both old established newspapers, have amalgamated, and appear as the *Chronicle Telegraph*.

THOSE interested in stereotyping plant and late news devices for newspaper printing should obtain a copy of a neat booklet just issued to set forth apparatus of this kind produced by Messrs. R. W. Crabtree and Sons, Ltd., of Leeds and London. This booklet deals with many very useful items of machinery and full illustrated particulars are provided.

Trade Union Matters.

THE Executive Committee of the Typographical Association have adopted a standing order to the effect that no member of the committee shall reveal the proceedings of the committee or publish extracts from the minutes except by the authority of the committee, the general president, or the general secretary. Any breach of this order will be dealt with by the Executive Committee.

T. A. AND CHRISTMAS DAY NEWSPAPERS.—At a recent meeting of the Executive Committee of the Typographical Association a letter was read from Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation, in reply to the snggestion of the T. A. that immediate action should be taken to secure the suspension of newspaper publication on Christmas Day and Boxing Day. Mr. Holmes stated that the Federation had approached the Newspaper Society with a view to arriving at a national understanding on the question.

MESSRS. C. G. CAREY (Southern Division), H. T. Whitley, Belfast (Northern Division), and T. Cassidy have been elected to represent the Typographical Association at the Irish Trades Union Congress, to be held next month.

THE jubilee of the Lincoln Branch of the Typographical Association has been celebrated by a dinner at the "Monson Arms," Lincoln. Mr. Dobby, president of the branch, presided, and the guests included the Mayor of Lincoln (Mr. R. A. Taylor, M.P.), the Sheriff (Mr. G. Robson), Mr. J. D. French (general president of the T. A.), and Mr. H. Skinner (general secretary).

MRS. A. BRIDGES, of the Printers, Bookbinders and Paperworkers' Union, is one of the British Women's Trade Unionists' delegation, which has spent two months in investigating labour conditions in Soviet Russia, and arrived back in London on Saturday evening.

Natsopa Homes Opened.

At Wellsborough, near Market Bosworth, Leicestershire, Lord Riddell officially opened on Tuesday a group of Memorial homes built by the National Society of Operative Printers and Assistants for their aged members. The property, which was acquired in commemoration of the society's members who fell in the war, is valued at £50,000

Speaking at a luncheon afterwards, Lord Riddell said the homes were a remarkable demonstration of trade union enterprise, efficiency and kind-heartedness. He hoped the time would come when every old member would be able to provide for his own old age in his own way.

Mr. George Isaacs, general secretary of the society and controller of the homes, said many of the society's younger members had never known, and he hoped they never would know as the older members did, what it was to work for very low wages with the terror of unemployment always hanging over their heads.

THE *Near East*, with which the *Indiaman* was incorporated early in the war, has now given fuller recognition to that union by adopting the title of the *Near East and India*, by which it will be known in future

POSTER PRINTING

Utilizing the Power of Print.

PRINTERS AT HARROGATE CONVENTION.

Amid the delightful surroundings of Harrogate the first British Advertising Convention has taken place during this week. Born of the International Advertising Convention at Wembley last year, the Convention, organised by District No. 14 of the Associated Advertising Clubs of the World, was attended by nearly 1,000 delegates and ladies who were the guests at the Yorkshire Spa of the Publicity Clubs of Leeds and Bradford.

Beginning with a Mayoral reception on Saturday evening, and formally opened on Monday morning with speeches by the Rt. Hon. Sir Philip Cunliffe-Lister, K.B.E., M.C., President of the Board of Trade, and the Rt. Hon. C. A. McCurdy, P.C., K.C., the hospitality and the business sessions were on a colossal scale. Separate sessions were devoted to every form of publicity, including newspapers, direct mail, screen advertising and photo-engraving.

The Printing Session.

A large number of printers were present who realised that the printing industry must not merely serve but must co-operate with the advertising men by supplying ideas and bringing to bear all the varied processes and potentialities of the printing press if advertising is to achieve its utmost.

These possibilities were clearly set forth on Monday at the printing session over which Mr. Alfred Langley, chairman of the Collective Advertising Committee of the Federation of Master Printers, presided. The several papers that were read, as well as the discussions that followed, were of very high quality, and revealed the tremendous resources that the printing press, in the variety of forms and processes and in artistic possibilities, brings to the field of advertising.

Mr. George W. Jones.

Mr. Geo. W. Jones, of the Sign of the Dolphin, London, said that the first printed advertisement was that issued by a printer 460 years ago when he advertised among other things the Bible of 1462—the first printed Bible. Only by means of one or other of the printing processes could the advertisers' appeal be made. How could the printer best make that appeal effective? The answer could be summed up in one sentence from the writings of one of the greatest thinkers of modern times: "Every man rightly constituted loves colour." If the printer was to enable the manufacturer to be effective in the sale of his productions, he had to make the industrial art in which he was engaged as nearly perfect as possible.

Mr. Jones said he had not been surprised to hear an advertising man say that big advertisers were more than ever convinced that colour was the drawing force, but he had gone further and said that advertisers even believed in indifferent colour. Mr. Jones said he had always held that if one could not afford *good* colour he should choose monochrome.

Sir Charles Higham had recently asked the Government to provide £100,000 for newspaper advertising to make Wembley a success, but there was no doubt that British people preferred a direct method to an indirect one, and he had gone into the matter and found that it would be possible to send to every home in the country a souvenir of Wembley on a good art paper in three or four colours for half the cost of the newspaper scheme Sir Charles had wanted. There were many customers to-day who would not have a job in only one colour because they said only the second colour paid. The newspaper could not give colour; but every printing office, however small, could give colour to the world in greater or less quantity. Take away the printing craft and three-fourths of the manufacturing industries of this country would reduce their staffs in a month. In regard to types, Mr. Jones said that it was just the little serif on the type that made it perfect or marred its beauty.

In the discussion that followed, Commander Ellis, an advertising agent, instanced three printers having estimated for a reproduction colour job at £62, £89 and £133. Two had claimed that nine colours were necessary, while one was prepared to do it with seven.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, said he thought advertising agents themselves were to blame for such discrepancies in that prices were sometimes asked of 300 printers for one job, this putting an unnecessary burden on the trade. Customers frequently did not give precise instructions in asking for estimates, and did not always appreciate, as the Americans did, that extra colours paid.

Mr. David Greenhill.

Mr. David Greenhill (Watford) spoke on "How Photogravure and the Newer Printing Processes Aid the Advertiser." While it was often said that offset and gravure would supersede letterpress and litho, he prophesied that the older processes would fight a wonderful rearguard action, as gas had against electricity.

The main advantage of offset was that it printed well on many kinds of paper and that duplicates could be produced quickly and cheaply. But it was necessary to understand its limitations. For fine detail and a great range of colour the ordinary three or four-colour process still held sway; but with offset the skilled artist had so to prepare his design that the process could reproduce it faithfully and to advantage. Improvement in offset should be increasing the possibilities of reproducing fine detail and increasing the depth of colour and scale of gradation.

Turning to photogravure, Mr. Greenhill exhibited some illustrations of biscuits and pottery which at first sight appeared to be printed in two or more colours. He also showed some excellent specimens of monotone and colour gravure. The great advantage of photogravure, he said, was its "telling" or "convincing" properties, due to its richness of tone and range of gradation, which enabled it to give a roundness and range of tone which was unobtainable by any other process. The difficulty of reproducing letterpress by photogravure had been overcome, and this process was now sometimes preferred because it was clean, strong and distinct. While photogravure would not produce well from a half-tone print it would usually produce a far better result in quality if one started with an equally good original. Photogravure showed its possibilities in that it was scarcely possible to put too much depth of colour and richness of gradation into the originals. For monotone work convincing pictures could be made by photogravure on a basis which was economical to an extent little understood by advertisers generally. We were on the threshold of a colour age in advertising. Considerable progress was being made in high-class colour gravure and he was prepared to state without hesitation that within twelve months a fair start would have been made in advertising in colour by the photogravure process.

Mr. Alfred Langley.

Mr. Alfred Langley (chairman of the Collective Advertising Committee of the Federation of Master Printers) was challenging in his paper on "Letterpress Posters for Advertisers." He contended that there was no greater power of publicity than poster advertising and that the letterpress poster could be produced with as much character, force, attractiveness and pulling power as a litho picture poster. The object of the poster should be to announce, leaving other forms of publicity to amplify. With the demand for a wider interpretation of the advertisers' needs, the printer had become a live force and the main factor in all advertising where practical knowledge of typography and technical details were so essential. Families or series of letterpress faces were available in all sizes so that the beauty, spirit and feeling required can be expressed in uniformity of style without monotony.

The Lino-cut process, Mr. Langley said, had emerged to the stage of commercial and practical application. This was a method of reproducing drawings, designs and lettering by engraving or cutting on a composition or prepared linoleum, and enabled all the effects, expressions and feeling of the old wood engraving and many of the effects obtainable by litho, to be produced. It was a return to the beautiful hand work of the craftsman and the cost of production when all was taken into consideration was considerably less than litho.

Some of the essential points of a poster were to give information, to give it in a manner that should compel attention, and to be suitable in style to the subject advertised. By these standards the picture posters shown at Wembley last year were failures. Originality for originality's sake was the worst form of egoism and a true symptom of mediocrity in art. The poster was the big shout in the passing show and the megaphone in the commercial fair, and passers-by had no time to try and discover what the artist thought he saw in the soul of his model or to visualise his nightmare, however vivid it might have been to him.

Mr. N. Hills Patterson.

Mr. N. Hills Patterson spoke with authority on the question of "Calendars as an Advertising Medium." He traced the history of calendar production during the past thirty years, in which period British productions by their excellence had ousted American importations. But it was not sufficient to stand still, because German and other foreign houses were looking at the possibilities of the English market.

Stock calendars called upon all the well known and other special processes to give the very finest work at lowest prices, and the only thing wrong with that trade was that representatives did not sell enough nor sufficiently endeavour to give the customer just the right calendar for his business. One live printer in a town of 100,000 people who obtained sample sets of really good calendars could greatly increase the consumption. The final destination was the deciding factor in choosing or producing an advertising calendar, and it was necessary to consider whether the calendar would ultimately find its way into the drawing-room or the maid's bedroom, to a jeweller or a potato merchant. On this type of calendar it was important to keep the size of the letterpress down, and where possible harmonise with the mount and the picture into one artistic whole.

This type of calendar was one which the printer could not himself adequately handle, and he needed to deal with trade houses dealing with large quantities, but the calendar which was specially made for the customer had received far too small attention, and there was business—not small business—to be created. Many firms would buy 1,000 calendars if they had a sound proposition put before them, and this business any good local printer could easily handle and create for himself without difficulty. The importance of the right use of the calendar as an advertising medium had not been fully appreciated. For the sum of a few pence, plus a design intelligently purchased and sold, the name of a business could be placed before its clients for a whole year, day in and day out. Not even the daily Press could claim anything like such a result.

Mr. J. H. Keighley.

Mr. J. H. Keighley (Leeds), dealing with the display of goods, said that a well considered and co-ordinated window display by means of the various forms of printing was valuable. "Copy" was the most important element. Brevity was desirable, but the mere announcement of the maker's name was not salesmanship.

Shopkeepers were becoming more shrewd as to the value of their windows, and preferred a general to a special display; producers therefore had to become more subtle in the displays they were able to secure. Display devices endowed the goods with a voice, and the "copy" on the show-card or cut-out was every bit as important in window material as in Press advertising. Window and counter devices required just as careful thought and effective treatment as any other part of the advertising campaign, because their function was to close the actual sale.

Mr. W. H. Sessions.

Mr. W. H. Sessions (York) told "How Labels and Seals Help Sales." A label must be distinctive, not merely in order to repeat the sale but to extend the number of users. The various uses to which an article such as a medical or toilet preparation could be put should be included on the wrapper, even at the loss of something in artistic appearance. No label would secure permanent sales for a bad article, but there was no doubt that the

Digitized by Google

better the label the better the sales if the article was worth buying. Three things counted in the sale of an article—reputation, advertising and make-up. A good label was one which appealed strongly to the buyers, *i.e.*, those who were most influenced by the outside appearance—not the connoiseur, but the general public. Because of the expense and disadvantage of altering registered designs, the trademark as well as the label must not be too up-to-date. "Puffing Billy" would always be interesting, but a firm using as a design an engine of twenty years ago would appear to be behind the times. The printer had to deal with two classes of customers: the man who understood advertising and had some artistic appreciation was helpful, but the customer who understood art but had a poor appreciation of advertising was difficult to deal with. Technical perfection was desirable, but not enough in itself. Advertisements must not have merely surface cleverness or technical skill—they must work.

Imperial Penny Post Demanded.

The Printing Session adopted a resolution to be sent to the Postmaster-General. Mr. E. H. Dennis (Scarborough) proposed and Mr. A. de Pine Strange (Eastbourne) seconded: "That the restoration of the Imperial penny post is a practical step which the Government should immediately take to help British trade and commerce."

Mr. J. A. Stembridge (vice-president, Federation of Master Printers), who proposed a vote of thanks to the chairman and speakers, reminded advertising agents that there were several kinds of printing, but he suggested they should adopt the slogan "Good Printing Always Pays." He urged printers to develop more on the advertising side.

Mr. J. Crowlesmith.

At the Direct Mail Advertising Section on Tuesday, over which Mr. Arthur Chadwick, managing director of Amalgamated Publicity Services, Ltd., London, presided, Mr. J. Crowlesmith, J.P., speaking on "Good Printing as a Factor in Direct Mail Advertising," said that a splendid spirit of idealism characterised all who were engaged in the advertising profession, but the one test was, does it pull? The form of advertising known as direct mail met that acid test. At the middle-class breakfast table the attractive brochure "got home" to the mistress of the household—and 75 per cent. of the goods advertised interested the woman. Without character and quality, direct mail advertising would fail, and the Americans at least realised that it was necessary for the printer and advertiser to work in active co-operation. The average woman was cultured and thoughtful and sought value for money, and if her attention was to be secured, printing matter sent must be attractive in style and quality, to the point, and in its truthfulness reliable. It therefore needed to be carefully thought out and planned. It did not compete with Press advertising, but was rather its auxiliary. The increased space available in the booklet enabled the whole truth about the goods to be told by their producer, and the complete story could be set forth in a way it was impossible for the newspaper advertisement to compete with. Variety, get-up, colour, new ideas, new types and original drawings were all important, together with a write up that compelled reading.

How could this service be better rendered in its completeness than by the advertiser and the printer working together to provide it? Good printing was expensive, but it was never too expensive if it was effective. Direct mail advertising had a great future in this country. Sooner or later the Government would be compelled to review the present high postal rates and would see (as the American Government had already seen) the futility of making postage so expensive that it not only retarded the circulations of our magazines, but by its heavy cost prevented the development of this most useful form of communication between the producer and the purchaser. In conclusion, Mr. Crowlesmith appealed for a real partnership between the advertising profession and the printing industry, and for the advertising men to work side by side with the Federation of Master Printers on the urgent and important question of postal rates.

There was a special art exhibit of printing design in letter headings and general commercial work; in calendars, show-cards and booklets; and in box-coverings, poster-stamps, and Christmas cards. The designs were selected for their utilitarian value and to demonstrate legibility, some deliberate plan of tidiness in arrangement, and fitness for their purpose. Posters had a seperate section and were intended to show the selling power of intelligent and strongly individual design in industry. Several of the Yorkshire Schools of Art had special exhibits.

The following resolution was adopted by the Direct Mail Section to be submitted to the final gathering of the full Convention on Wednesday:—

> That in the interests of trade, the general good of the country and increased employment, an early return to Penny Post is imperative; and that the necessary steps be taken to communicate the terms of this resolution to the Prime Minister and to the Postmaster General.

Direct Mail Advertising.

During the course of the Direct Mail Session reference was made to the fact that there is no organisation of those interested in this form of advertising, and those attending were invited to sign a form indicating their sympathy with the formation of two sections—one for the user end and the other for the creative end.

Mr. Sidney Hart (St. Clements Press, London), in proposing a vote of thanks to the speakers, urged advertising agents and advertisers to keep in touch with their printers and learn more of the facilities that the printers could place at their disposal.

Mr. J. Crowlesmith proposed the vote of thanks to the chairman.

Mr. A. Langley (chairman of Collective Advertising Committee of the Federation of Master Printers), referring to the possibility of "advertising Wembley" by direct mail as outlined by Mr. Geo. W. Jones at the Printing Session, said that such an order would mean the using of four tons of coal for every ton of paper consumed, and would give increased employment in producing and distributing. Other forms of advertising would not only be more expensive and less effective but would not add one penny to wages paid. The Government were being asked to spend £1,000,000 on increasing the sale of British goods and if one-half of that sum were spent in direct mail advertising rather than the whole of it on press advertising, employment would be greatly stimulated thereby.

Since its formation in February, 1917, and up to June 30th, 1925, the Euston Press Savings Association (Langley and Sons, Ltd.) has purchased for its members 10,015 Certificates at a cost of £7,833 5s. 6d.

FOR SALE BY PRIVATE TREATY.

WARRILOWS LIMITED, BIRMINGHAM.

BY Direction of Sir Arthur F. Whinney, K.B.E., the Receiver and Manager for the Debenture Holders.

EDWARDS, SON & BIGWOOD, F.I.A.,

have received instructions to offer for sale as a going concern the VERY VALUABLE OLD ESTABLISHED BUSINESS, TOGETHER WITH THE EXTENSIVE MODERN PREMISES, TRADE PLANT, FITTINGS AND STOCK IN TRADE.

THE PREMISES in which the business is carried on is a Handsome, Modern, Well-lighted, Heated and Ventilated Block of Buildings, mainly of 5 Storeys and Basement, completed in 1920, and constructed to comply with the requirements of the Factory Acts, and fitted with 4 lifts.

THE PROPERTY is partly Freehold and partly Leasehold and occupies an important site in Great Hampton Street, at the corner of Well Street, and with a good frontage to Barr Street, Hockley, in the heart of the Jewellery District, on the main road to Wolverhampton, within half a mile of the centre of the City of Birmingham.

TOTAL FLOOR SPACE 128,000 square feet.

THE PLANT comprises a nearly new up-to-date equipment of the highest quality for carrying on, on a large scale, the business of Litho, Letter-press and Colour Printing, Cardboard Box Making, the Production of Playing Cards, etc., and extensive retail Stationery Business.

Purchasers will be required to take over the Stock-in-Trade and Work in progress at Valuation.

Further particulars may be had of the Receiver and Manager, Sir Arthur F. Whinney, K.B.E., (Messrs. Whinney, Smith & Whinney, Chartered Accountants, 4b, Frederick's Place, Old Jewry, London, E.C.2), Messrs. Coward, Chance & Co., Solicitors, 30, Mincing Lane, London, E.C., or of Edwards, Son & Bigwood, Auctioneers, Surveyors and Valuers, 158, Edmund Street, Birmingham, with whom arrangements to view may be made.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Per line 1/0

Pushing the Sale of Print.

IT is a memorable thing in the history of British trade, and especially of the printing trade, that this week has brought the first British Advertising Convention. As was well said by Mr. Stuart A. Hirst, chairman of the Convention Organising Committee, we in this country are better producers than salesman. It is not so much on the score of quality that British manufacturers are open to unfavourable comparison with some of their overseas competitors, nor even so much on the score of efficiency of productive methods, as on the score of ability in "telling the world"—making known their goods in such fashion as to extend the market for them and thus cheapen production. There are still big possibilities of profitably extending the scope of the advertising of British products at home and abroad: there are big possibilities, also of improving the quality and effectiveness of such advertising as is undertaken. In the extension of advertising the printer is vitally interested, for it necessarily means more grist to his mill: and in the improvement of the quality of advertising the printer is interested no less, for such skill as he may acquire in exploiting the capabilities of the printing press for the production of effective advertising is a powerful means for the extension of his business. Such being the close association between the printing trade and the development of advertising, it was but fitting that representatives of the printing industry should be to the fore at the Harrogate gatherings—it would, indeed, have been still more fitting had they occupied a more prominent place than they did. However, the trade has cause for satisfaction in the fact that a number of its able representatives attended the Convention, and—as reported on another page—told forth in no uncertain tones the important place held by the printing industry in the forward march of present-day advertising.

Price Cutting.

A GREAT deal is said and written nowadays on the subject of price-cutting, just as so much was put forth in earlier days on that of sweated labour. The rise of trade unionism and the new view on labour questions have together served to practically eliminate what was termed sweated labour and there are comparatively few sections of any trade or industry into which reasonably fair conditions have not been introduced. If labour has, therefore, ceased to sweat, it has now fallen to the lot of the employer and proprietor to perspire in mental anguish at the prospect afforded by prices cut so close to the bone that all sustenance has gone. There is just this difference, perhaps, that, whereas your sweated labourer perspired continuously and without relief, our embarrassed employer has his moments; in plain words, there are the orders which do not hang entirely on an unprofitable price.

* * *

Stationery Office Methods.

THE Government officials are commendably keen on insisting upon fair conditions of labour and standard rates of pay for all workers engaged in the production of paper and print supplied to the requirements of the Stationery Office. They are no less keen in pitting employer against employer in search of a price which will make it difficult for the successful tenderer to pay the wages stipulated and at the same time get any for himself. It is something of an anomaly that such insistence should be made on a fair return for labour and so little regard paid to the deserts of the manufacturer. Of course, the argument is that of fair competition; but in practice it is a case of beating down prices and choosing the lowest. Paper may be better than printing so far as Stationery Office contracts are concerned, because it cannot possibly be worse. The printer who makes most mistakes and knows least about his costs gets the largest percentage of acceptances to his tenders. Paper values are more easily gauged than those of printing, because there are relative qualities and common market standards to gauge by which do not exist for printing. Consequently, printers are probably greater sufferers from S.O. orders than papermakers. Still, if it is to the public interest to economise to unlimited extents on stationery used in the public service, even though the methods employed contain the element of disaster for those to whom they are applied, it may be taken for granted that those in authority will efficiently safeguard the public interest.

* * *

Our Manufacturing Costs.

ON the matter of cost in manufacture there is something fundamentally wrong. Compared with other countries, our power and transport costs are out of proportion. So is our burden of income tax and rating, as well it might be with so many millions spent on the dole and so many more on civil administration. This Government is as helpless as any other to solve the problem of unemployment and is not much more greatly endowed with the faculty of intelligently sympathising with and practically helping the industry of the country. The first great step forward to be made is that of providing electric power in the mass and cheap enough to enable every manufacturer in the country materially to reduce his power bill. After that, there will be room to consider transport charges, not to speak of shipping rates, which at present are anything but conducive to the development of our export trade. But the first and the greatest thing that can be accomplished is the solution of the cheaper electricity problem. We may not have many fast-running rivers and we certainly have no Niagaras; but what rivers, waterfalls and other native founts of energy we have are not being made much use of.

WEST AND NORTH-WEST

London Master Printers' Outing.

Visit to Lanston Monotype Works.

Delightful weather favoured this Association on the occasion of its annual summer outing on Tuesday of last week. Boarding two charabancs, supplied by Messrs. Rickards of Paddington, master printers and their ladies to the number of just over 50 enjoyed a ride to the Lanston Monotype Corporation Works at Salfords, near Horley. The route was a picturesque one via Wimbledon, Morden, Leatherhead, Dorking and Reigate, and the return journey was made via Reigate Hill, Epsom, Sutton and Mitcham. A brief break was made on the outward journey at Dorking, and Salfords was ultimately reached about 1 p.m.

A Luncheon Welcome.

The company were welcomed by Mr. W. I. Burch (managing director), Mr. Pierpont (works manager), Mr. Atkinson and other representatives of the Corporation and were at once grouped and photographed. That over, an adjournment was made to the spacious dining hall where an excellent lunch was provided to which full justice was done. Mr. W. I. Burch presided, supported by Mr. Pierpont, Mr. Searle (president of the W. & N.-W. M. P. A.), Mr. Leveridge (vice-president), Mr. Simnett (vice-president, London Alliance), Alderman and Miss King, Mr. and Mrs. J. R. Burt, Mr. and Mrs. Crannis, Mr. and Mrs. Pollock, Mr. and Mrs. Perry, etc.

Mr. W. I. Burch, managing director, having proposed the loyal toast, which was duly honoured, proceeded to welcome the party to Horley in the name of the directors of the Lanston Monotype Corporation. He said they were delighted to have the opportunity of welcoming the West and North-West Master Printers' Association, and felt sure they had something of interest to show them. He had much pleasure in proposing success and prosperity to their Alliance. In London they knew the active part their Association took in the industry, and it was a pleasure to welcome them to Horley.

Mr. H. W. Searle, president of the West and North-West Association, briefly acknowledged the toast. He thanked Mr. Burch for the courteous welcome he had given them to Horley and for the very kind allusion he had made to the work of their Association, which was the oldest in the London Alliance. He hoped as an association they would continue to gain in strength and numbers and it was certain that such outings as they had that day went materially towards making the success of their Association. He was sure they would one and all be very interested in passing through the company's works. He was delighted to think there were so many ladies with them which gave added enjoyment to the outing and he had much pleasure in submitting the toast of "The Ladies" (applause).

Mrs. Pollock then aptly acknowledged the toast. She was sure the ladies would be equally interested in making a tour of the works and would take an intelligent interest in observing how the monotype machine was made.

Tour of Inspection.

Then followed a tour of inspection of the works. These might well serve for a model industrial institution—right in the heart of the country, surrounded by open fields. The buildings are grouped around spacious lawns, and many of the employees occupy delightfully picturesque cottages on the estate, with gardens full of flowers which were a joy to the eye and a charm inspiring the pleasantest sensations.

A tour of the interior of the workshops showed that everything had been planned to ensure work being done under conditions calculated to make it agreeable and efficient.

Starting with the drawing offices—where the type designs were first drawn, then reduced in wax, and ultimately reproduced in punches with a meticulous accuracy graded to the ten-thousandth part of an inch—the visitors were conducted in small parties by guides who intelligently explained the various operations which eventuated in the perfect matrix. Even more delicate were the processes by which the moulds were manufactured, and when the vast machine shop was reached, where the numerous delicate pieces of mechanism which when assembled constitute the complete casting machine, the company were ready to do full homage to the brains which had evolved so interesting, so delicate, and so efficient a machine as the Monotype.

After a short rest on the lawns the visitors assembled for tea, at the conclusion of which Mr. J. R. Burt said the president had already acknowledged the toast of "Success to the London Alliance," of which the West and North-West Association was a part, and it was now his pleasure to return thanks to the Monotype Corporation for the very excellent entertainment they had provided for them that day.

A Most Instructive Demonstration.

They had provided, he said, a real educational treat, such as they, as a District Association, strove to provide for their members. They had not only provided hospitality and entertainment for their members, but also for their ladies, and the more they could get the ladies to take an interest in their trade, the better it was for themselves. One of the objects of their Association was to uplift the trade, and one of the best ways of doing so was to show one another over their factories and help one another to solve their difficulties. It was, therefore, most interesting to go over these factories to see how the machines which they used in their works were made, and the many processes which were entailed before those machines could be placed on the market. That afternoon, he could safely say, they had experienced one of the most interesting and instructive outings they had yet had. He never remembered going over a factory where everything was so wonderfully organised, so compactly put together, and so excellently explained by those deputed to take them round. The smallness of each party enabled everyone to thoroughly grasp all the different processes involved in the production of this wonderful machine. The remarkable precision and accuracy with which everything was carried out was demonstrated by the presentation to each one of them with the Lord's Prayer inscribed on the top of an em quad. Let them repeat that prayer and thank God for all that had been done for them. On behalf of the West and North-West Association he wished to thank the directors for all they had done. They had put themselves to a considerable amount of trouble to make their outing a success, and he was sure it would be remembered for many a long day. He would like to take the opportunity also of thanking Mr. Crannis, their secretary, who had organised the excursion. He was pleased to say they had with them Mr. Simnett, the vice-president of No. 1, the London Alliance, and several officials of other associations and he would ask Mr. Simnett to second the vote of thanks which he now proposed.

Mr. Simnett, the vice-president, had much pleasure in seconding Mr. Burt's vote of thanks. It was always a great pleasure to meet Mr. Burch. They had seen him thoroughly enjoying himself in the ballroom at Buxton, they saw him again quite recently distinguishing himself in the presence of Royalty, on the occasion of the visit of Prince Henry at the Printing Exhibition and now they had seen him again as their host at the luncheon and tea-table. He could not help congratulating him on his way of combining business with pleasure. Mr. Simnett commented upon the marvellous improvements shown in the development of the Monotype machine of 20 years ago into the perfect model of to-day. They must all of them have been impressed with the perfect orderliness of the factory and grateful for the extreme courtesy that had been extended to them. They felt they were dealing with a company that had perfection as its key-note. He congratulated the directors upon having such a model factory. Mr. Burt had touched on the success which attended such outings as they had had that day; one could not imagine such a gathering taking place amongst master printers ten years ago. All the old conditions were changed, they now welcomed one another in their works and gave of their experiences to one another, which must be of vast advantage to the trade generally. That was the right direction to take and as their Associations got closer and closer together, they would make a step forward in uplifting of the trade and the quality of the output.

Mr. Burch in returning thanks, alluded to Mr. Simnett's remarks as to what took place at Buxton, and he felt he must say in justification that he went to Buxton as a printer and was only too delighted to participate in the hospitality extended to all the visitors there. So far as their visit to Horley was concerned, he could assure them it was a pleasure to welcome them there, and they admired the good work the associations were doing, and they were only too delighted to participate in that work for the benefit of the industry. With regard to their kind references to the orderliness of their factory, he could only say that Mr. Pierpont, their works manager, had been with them since the factory was started twenty-eight years ago, and its appearance to-day was largely due to his personal ability. He would like to add the directors' thanks to Mr. Crannis for so kindly making all the arrangements for bringing such a pleasant party together. He expressed regret at the absence of one of their old friends, Mr. Langley, who in course of conversation, had explained to him that the Association generally arranged an outing each year, but so far had not arranged one this. Mr. Langley put it so nicely that he had not the slightest hesitation in coming to the rescue, and that afternoon's meeting was soon arranged.

Mr. Crannis briefly returned thanks to the gathering for the little part he had played, nnd he could only add to what had already been said in expressing his thanks for the hospitality which had been extended to them by Mr. Burch and the Monotype Corporation that they were told on going round the engineering shops the engineers had to work to one-ten-thousandth part of an inch, and this he thought was characteristic of the excellent arrangements made for their comfort that afternoon.

At 6.30., with more expressions of thanks to their hosts, the party mounted the vehicles to return to town, both ladies and gentlemen carrying some choice blooms of roses and other flowers given by the Monotype Corporation.

Altogether the West and North-West Master Printers' Association is to be congratulated in having, through the hospitality of the Lanston Monotype Corporation, provided its membership with another delightful day which will take its place in their memories with the pleasurable recollection of that enjoyed last year, when Eynsford, Rochester, and Gad's Hill Place were visited.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

BELGIUM.

An agent, established in Brussels, is desirous of obtaining the representation, for his own account, of British firms for the sale in Belgium of fashion journals, stationery, art needlework papers, etc. (Reference No. 703.)

FRANCE.

An agent, established in Paris, is desirous of obtaining the representation of British firms for the sale in France of china clay and colours. (Reference No. 706.)

NORWAY.

A firm manufacturing collapsible tubes, etc., for containing toilet preparations is desirous of getting into touch with a British firm able to supply them with a special machine of British make, suitable for printing on collapsible tubes. (Reference No. 713.)

POLISH SILESIA.

A well-connected commission agent in Bielsko desires to obtain the representation for Polish Silesia of British paper manufacturers, especially such as are in a position to export printing and writing papers weighing more than 28 grammes per sq. metre. (Reference No. 714.)

ARGENTINA.

The principal of a British merchant firm, with a first-hand knowledge of the Argentine, who is shortly proceeding on a twelve months' business trip to that Republic, desires to get in touch with British firms interested in colours, heavy chemicals, etc., with a view to representation. (Reference No. 718.)

NEW ZEALAND.

A firm of agents established in Christchurch wish to obtain the representation of British manufacturers of office equipment and stationery. (Partial repetition of Reference No. 572). (Reference No. 725).

UNDER new Customs regulations of the Netherlands, "process blocks and printers' blocks" are admitted free of duty.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

Mr. R. B. Simnett.

Mr. R. B. Simnett, the recently-elected vice-president of the London Master Printers' Association, has of late come rapidly to the front in matters concerning the organisation of the printing industry. He holds high ideals as to the status of the craft, and aims at the perfection of work. He is, in fact, a constant advocate of better printing, with creative work in the background; and he practises in his business what he advances on the platform. Mr. Simnett is the youngest son of the late Benjamin Simnett, of Ormesby, St. Margarets, Norfolk, and was born in December, 1865. He joined the firm of Saunders, Phillips and Co., Ltd., in 1894 as secretary. In 1903 he was appointed a director, and in

Mr. R. B. Simnett.

January, 1919, he became joint managing director. A Fellow of the Institute of Directors, Mr. Simnett takes his work seriously, and he has helped in no small degree to give his firm the high standing to which it has attained.

On the organisation side of the industry the subject of this sketch has rendered good and persistent service. He was elected to the office of president of the South-West London Master Printers' Association in 1924-5, and was reinstated in the chair this year. He is a member of the London Executive Council and of the following committees: Organisation and Finance, Labour, National Advertising, and Costing. The London Committee of the Joint Industrial Council also enjoys the benefit of his ripe experience and clear thinking. With his appointment as vice-president of the London Association his advance to the leadership of the central body is a question of time, and the demands of that important office will not find him wanting. Mr. Simnett's hobbies are boating and carpentering.

TYNDALE FACSIMILE.—This year brings the four-hundredth anniversary of the publication of Tyndale's New Testament, and the Oxford University Press proposes to celebrate the event in interesting fashion. The only known scrap of the original is an imperfect copy, in the British Museum, of Tyndale's Prologue and a part of the translation of St. Matthew. He began to print an edition of 3,000 copies, of which this was one, at Cologne in 1525, but was discovered when he had reached the end of the tenth quire; and, though he escaped with his printed sheets to Worms and there issued 3,000 copies, not one of them was allowed to survive. What the Oxford University Press proposes to do is to publish a facsimile of this British Museum copy of the unfinished Cologne quarto.

Personal.

SIR CHARLES HYDE, the proprietor of the *Birmingham Post*, has offered to give the balance of £3,920 towards the funds of the Birmingham Children's Hospital if £20,000 be obtained by public subscription. Sir Charles has already made a donation of £1,000.

SIR ROBERT BAIRD, the proprietor of the *Belfast Telegraph*, the Right Hon. Thomas Moles, Mr. E. G. Robinson, and Mr. Frank Johnstone have, on the nomination of the Ulster District, been elected to Fellowship of the Institute of Journalists.

MR. S. M. NICOLL, of Greenock, general manager of Messrs. David Allen and Sons, colour and general printers, has been elected president of the Scottish Billposters' Association. Mr. J. M. Kay, of the West of Scotland Billposting Co., has been elected secretary in succession to Mr. Thomas Mackie, who has resigned after 13 years' service.

MR. W. M. GRAHAM (of the firm of Graham and Heslip), is the winner of the annual competition for the Belfast Printing Trades Golf Challenge Cup.

MR. FREDK. J. BOLD, formerly of the Goss Printing Press Co. and Messrs. R. W. Crabtree and Sons, Ltd., is joining the staff of Messrs. Usher-Walker, Ltd., as from July 1st. Mr. Bold is an outstanding personality in the newspaper world, and we are confident that his large circle of friends will wish him success in his new capacity.

MR. JOHN MCPHERSON, who had been in the service of *The Times* for 48 years, retired on a pension last week.

MR. MCPHERSON entered the office in October, 1876, and was placed in the composing room, where, after serving five years on day work, he spent the remaining 43 years in the stress of night work. He had served under five managers, five editors, and five printers. As a parting gift, his colleagues presented him with a silver *entrée* dish and a pair of cut-glass flower vases.

MR. THOMAS STEWART, a member of the machine room staff of the *Scotsman*, has been presented with an inscribed watch on retiring after 50 years' service.

MR. LAURANCE W. DEVLIN, of the composing room staff of the *Irish News*, Belfast, has been presented by the staff with a gold watch on leaving to take up an appointment at Bangor.

MR. S. E. MASTERSON, of the staff of the *Belfast Witness*, has been presented with a dressing case on leaving to take up the managership of the Belfast Steam Printing Company.

MR. and MRS. JOHN LUCAS, of Potter-street, Harlow, have celebrated their golden wedding. Mr. Lucas has for over 40 years been a member of the composing staff of the *West Essex Gazette*, Epping.

MR. T. DOVE, of Sheffield, who for several years has represented the Sheffield District on the Executive Committee of the Typographical Association, has been presented with a gold Waterman self-filling fountain pen on his leaving the Council.

AT the annual meeting of the United Kingdom Advertising Association at Blackpool last week Councillor T. D. Schofield, of Bridgend, the retiring president, was presented by the members, through his successor, Mr. Cyril Sheldon, of Leeds, with a gold jewel and chain to commemorate his year of office.

MR. J. KALTENBORN, the assistant editor of the *Brooklyn Eagle*, visited Wembley on Saturday, and conducted a party from Brooklyn on a "whirlwind" tour of the Exhibition in a space of two hours, in which time Australia, New Zealand, the three Canadian Pavilions, India, the Gold Coast, Nigeria, Sierra Leone, Palestine, South Africa, and the British Government Pavilion were visited.

The Stationers' Company.

Lord Balfour, Mr. Kipling and Sir J. Barrie Enrolled as Honorary Freemen and Liverymen.

Lord Balfour, Sir James Barrie, and Mr. Rudyard Kipling were on Friday enrolled as Honorary Freemen and Liverymen of the Stationers' Company in recognition of their services to literature. The ceremony, accompanied by its quaint observances, took place in the historic Stationers' Hall, in the presence of a company of distinguished guests.

Each of the three distinguished men had to face the same honourable ordeal, being ceremoniously conducted by Lord Marshall of Chipstead and Sir G. W. Truscott to a centre table on a raised platform to be greeted by the Master (Mr. Richard Bentley), the Wardens, and the Liverymen. Each had to read the ancient declaration of a Freeman Bloud, and each had to step aside with the aeadle, and come forward again clad in a Livery gown.

The Luncheon.

The ceremony of investiture having been concluded the company were entertained at luncheon, the Master proposing the health of each guest separately.

Proposing the health of Lord Balfour, the Master referred to Lord Balfour's services to the State, and then detailed some chapters in the history of the Company. In its earlier days—in those of the Star Chamber—the Guild, he said, was largely used both politically and religiously as an instrument of repression; and previous Masters were armed with drastic and extraordinary powers of search of domicile, destruction of unauthorised printing presses, and of the damasking of unlawful copies.

Lord Balfour, in replying, said he was not aware that in the earlier part of the 17th century the Stationers' Company was an instrument for suppressing free thought. He began to reflect whether if the Dean of St. Paul's and himself had lived in the days to which the Master referred, their activities might not have been directed, or misdirected, towards dealing with speculations which in those days, though he hoped not in these, might have been regarded as perilous in their character.

Sir James Barrie, in the course of his response, said he was proud to be a Freeman and Liveryman of what he saw was long ago called the mystery or art of the stationers, but that they should care to include him seemed to be yet another of the Company's mysteries.

Mr. Kipling and the "Eleventh Plague."

Mr. Rudyard Kipling, in responding, referred to the honour conferred upon him as being a heavy responsibility. Continuing, he said: "One cannot deny that the world might have been happier if stationery had never been invented. Yet it must have been a brother of our mystery—an original Hieratic Stationer—who first discovered that if you soak the leaves of the papyrus plant in the muddy waters of the Nile, and beat upon them with a mallet, the beastly stuff sticks together and makes what looks like paper. So we called it paper, and we supplied it as stationery, and men began to write upon it with reed pens. And when, in the course of time, we had rooted every green thing out of the Valley of the Nile; when we had killed the fatted calf and the unfatted calf, and the calf unborn, to make vellum, we tore the very rags off the backs of beggars, and we ground them and we pulped them to make more and more stationery. Why did we do that? Because some desperate soul, impatient of the slow, beautiful handicraft of the past, had invented an apparatus called the printing press. But, a printing press without paper being as innocuous as an unloaded gun, we instantly charged it with stationery—the magnificent paper of Caxton's time—and we improved the machine itself; and we devised special inks for it; and we created the business of publishing and distribution, and among us we launched the Eleventh Plague on suffering humanity. Since that dreadful date there has not been a crime in the Decalogue, from anonymous letter-writing to the spread of idealism, which we have not fostered, facilitated, and democratised. Incidentally, too, we have turned life into the nightmare of a never-empty wastepaper basket."

Among other toasts honoured was the health of Lord Allenby, who acknowledged the compliment, and of the guests, which was responded to by Dean Inge.

Printing Ink for India.

The Government of India has published the report of the Tariff Board regarding the claim to protection of the printers' ink industry. The Hooghly Ink Co. of Calcutta, the largest manufacturers in India, had urged either exemption from the payment of duty upon all imported raw materials, representing 15 per cent. *ad valorem*, or an increase in the import duty on the manufactured article from 2½ to 15 per cent. The Board recommended the Government of India to increase the import duty to 5 per cent. as the most simple and direct method of helping the industry, which possessed only a few natural advantages and whose market was limited. The Board added that if the duty were raised to 15 per cent. the result would be to raise the average selling price by over £15, which was clearly inadmissible.

Firms' Annual Outings.

ON Saturday last the employees of Messrs. B. Winstone and Sons, Ltd., went for their annual outing to Margate by charabanc. An excellent luncheon was provided by the company at the Metropole Hotel, at which about 130 were present. Mr. Eric W. Muirsmith, commercial director, occupied the chair (supported by Mr. F. R. Briant, director), and proposed the toast of "The King," after which Mr. H. Smith proposed the toast of "The Firm." Speaking for the works' side, he expressed his confidence in the company's products and the willingness with which all contributed to the firm's success. Mr. Eric Muirsmith replied that it was a pleasure for the management to have an opportunity of meeting the staff socially, and hoped that all present would have a happy and enjoyable day. A message was received from Mr. W. Muirsmith, J.P., chairman and managing director, conveying his good wishes to the gathering, which message was received with much enthusiasm. After a few enjoyable hours at Margate the return journey was commenced at 6 o'clock, the party arriving in the City at 10.30. Satisfaction was expressed on every hand with the arrangements which had been made and so successfully carried out. It was a thoroughly enjoyable day much appreciated by all.

THE employees of the Record Composition Co., Ltd., trade type-setters, held their 11th annual outing on Saturday, when a party numbering 51 journeyed to Brighton. In the morning a criket match between the lino and mono departments took place, and the afternoon was occupied with a drive through the Ouse Valley. Weather conditions were ideal, and a most enjoyable day was spent.

A REPRESENTATIVE gathering of the machine-room staff of the *Daily Chronicle*, presided over by Mr. Daniels, overseer, and Messrs. Swash and Lazarus, fathers of the chapel, was held at the Trust House London Hotel, Southend, on Saturday. Mr. G. W. Mascord, a director and general works superintendent, was present by invitation of the chapel, and addressed the men.

THE Compositors' Chapel of the Cornwall Press, Ltd., held their annual outing at Brighton on the 27th ult., the party numbering upwards of a hundred. At luncheon, in the Royal Pavilion, an enthusiastic welcome was given to Mr. W. Coker Iliffe (chairman of the company), who occupied the chair. The chairman called attention to the fact that there were in the compositors' department five men with a record of over fifty years' service each, and on behalf of the directors he presented Messrs. C. H. Russell, A. Miles and G. Bullen with a gold watch each in recognition of 55 years, 50 years and 60 years' service respectively. Mr. Iliffe mentioned that unfortunately Messrs. T. Temple and J. Green, with 53 and 54 years' service respectively, were unable to be present owing to illness, but he proposed asking the secretary of the company to call upon them and make the presentations.

A NEW number (March-April) has just been issued of the *Monotype Recorder*. Several articles of interest to printers, together with a number of reproductions of pages of ancient books are included. The whole is beautifully printed, and says much for the capabilities of the Monotype way.

"THE proof of the block is in the printing" is the slogan that runs through a handsomely produced pamphlet that reaches us from Messrs. John Swain and Son, Ltd. It contains superb examples of half-tone block printing, and provides proof of how very effective a half-tone illustration can be when from a block of the highest quality.

THE attractions of the 35 Babcock "Optimus" two-revolution press—which prints a 22 in. by 33 in. sheet at 3,000 an hour—are brought forcibly to our notice by the receipt of publicity matter sent us by the well-known typefounders and printers' engineers, Messrs John Haddon and Co., of Salisbury-square London, E.C.4.

"TYPE TALKS," the neat miniature magazine which Messrs. Macaire, Mould and Co., Ltd., of Mount View Press, Crouch Hill, send monthly to their friends, maintains its attractive snappiness and indicates a good sense of sales pushing publicity.

Messrs. Jas. Truscott and Son, Ltd.

Annual Wayzgoose.

The annual wayzgoose of Messrs. Jas. Truscott and Son, Ltd., was held at Clacton-on-Sea on Saturday, June 20th, when Sir George Wyatt Truscott, chairman of the company, presided over a company of members of the staff, guests, and pensioners of the firm, at a lunch which was held in St. James's Hall. Sir George was supported by Col. Roy Truscott, Mr. W. S. Tredgold, Mr. A. Bennett and Mr. Eric Truscott.

After the toast of "The King" had been duly honoured, Mr. Ford, the deputy overseer of the composing department, in proposing the toast of "the firm and the health of the chairman," asked permission to take the latter part of the toast first—the health of the chairman. He said all appreciated that the health of the chairman was imperative to the success of the House of Truscott, and from the directors to the youngest messenger boy they all hoped Sir George would be blessed with good health to enable him to carry on his duties as controller of the House of Truscott for many years to come. Mr. Ford said he felt it was a fitting occasion for him to tender to the directors the staff's appreciation of the friendly manner with which they listened to any complaint that was brought to their notice. He felt proud to say that all complaints and grievances were always settled amicably. It was a proof of the traditionally happy relations existing between the administration and the staff that these annual gatherings had been given continuously since 1865 and had always been cordially supported. Concluding, Mr. Ford said that the whole staff was determined that the House of Truscott should know of no failures through the lack of co-ordination between employer and employee.

Sir George, replying, thanked all present for the very cordial reception which they had given the toast. He mentioned that this was his jubilee year in the firm, and that he went to his first wayzgoose at the "Greyhound," Great Marlow, in 1875, when his late brother, Mr. James Freeman Truscott, presided. He emphasised the cordial relations which had always existed between the firm and the staff during that half century, and expressed his heartfelt appreciation of the great kindness which he personally had always received. He wished particularly to thank Mr. Ford for his recognition of the fact that the directors were always individually accessible to any member of their staff at any time that they wanted to approach them.

Sir George extended a very hearty welcome to the visitors and complimented the stewards on the excellence of the arrangements.

The catering was most admirably carried out by Messrs. E. J. Tweed and Son of Colchester. The party returned to London late in the evening by special train after a most successful outing, the enjoyment of which had been much increased by fine weather.

Presentation to Mr. H. Holmes.

Mr. H. Holmes relinquished his appointment as managing director of Messrs. Charles Morgan and Co., Ltd., wholesale stationers, High Holborn, on June 30th. During the afternoon the whole of the clerical staff assembled in the counting house, and the chairman, accompanied by the directors, presented to Mr. Holmes, on behalf of the directors and staff, a suitably inscribed 18 carat gold hunter watch; also a case of notes for Mrs. Holmes to purchase a gate-legged table bearing an engraved plate, as a memento of Mr. Holmes' association with the firm since the year 1891.

Mr. Holmes informs us he has not made any plans for the future. It was originally intended that he should take an interest in a business in the country, but negotiations have been dropped, and he now intends to remain in London, his address being 72, Chatsworth-gardens, Acton Hill, W.3.

THE centenary of the invention of photography is being celebrated in Paris by means of an international photographic and cinematographic congress, at the headquarters of the National Union of French Photographic Societies.

Monotype Users' Association.

Costs and Customs.

On the occasion of the annual meeting of the West of England and South Wales Monotype Users' Association, held at Bristol on Monday of last week, the members were entertained to lunch by the Lanston Monotype Corporation, Mr. W. I. Burch, managing director, presiding. On the proposition of Mr. R. J. Webber (Cardiff), supported by Mr. Botwright (Bath), hearty thanks were accorded to Mr. Burch and his co-directors for their hospitality.

Mr. J. Corrigan presided, and the annual report and accounts were submitted and adopted. Officers were elected as follows: President, Mr. J. Corrigan; vice-presidents, Messrs. C. E. Brendon, R. J. Webber and S. A. Penney; secretary, Mr. R. C. Hobbs; treasurer, Mr. Hill; auditor, Mr. Conyer. Committee re-elected.

Mr. F. Waterhouse, chairman of the National Committee, expressed his pleasure at being present and gave an interesting review of the negotiations with the Typographical Association regarding caster attendants, and spoke of the importance of training sufficient keyboard operators. He remarked on the value of the Association's work in bringing together the hundreds of monotype users in the country, and stated that the capital represented in the machines in use exceeded three million sterling. The closer study of cost, the regulation of customs, and the protection of all the interests of monotype users came within the scope of their programme. He alluded to the care with which the Lanston Monotype Corporation attended to all enquiries, and treated all customers as friends.

How to Increase Sales.

Mr. A. E. Goodwin, hon. secretary of National Committee of the Monotype Users' Association, said: "Two problems of outstanding importance are being discussed everywhere to-day: 'How to Reduce Cost?' and 'How to Increase Sales?' Taking the last question first—everyone tells us to-day that British goods are as good in quality as ever, and we know that this is true of British printing. Go to any exhibition of international printing to-day and British work stands the test well for style and quality. But it is in the marketing of goods British manufacturers and merchants can improve their methods, and if the assistance of the printer was called in more frequently we should certainly see an improvement. But printers need to set an example to other traders.

Get Ready.

"Next week the value of advertising will be proclaimed from the heights of Harrogate in no uncertain way. Are the printers doing their share in this effort? Are you getting ready to take advantage of this opportunity when interest will be aroused and attention called to the importance of all advertising methods?

"A few months ago the Federation issued thousands of copies of a booklet showing how booklets would help business. One member sent us twenty names and he has secured three good orders out of that number from firms who had never thought of issuing a booklet before. To create new work should be the great aim.

"The versatility of the monotype is well-nigh indescribable. It can do anything except sign cheques! (Laughter). But it is specially adapted for printing for advertisers, because of the great variety of faces and styles it gives you. Truth in advertising is essential, but beauty and variety must also be observed, to be successful in advertising.

Book Printing Costs.

"Then the monotype is invaluable for book production.

"But it is becoming painfully evident that the mere possession of a monotype does not always imply that the firm can take up book production without possessing other facilities and knowledge. I referred to reduction of costs being a pressing question to-day, but before you can reduce your costs, you must *know* what they are. This is not quite as simple as it looks at first sight.

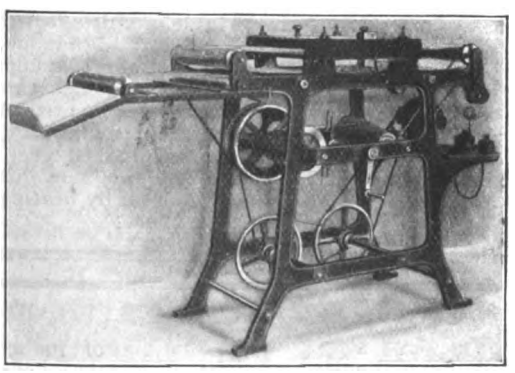
"The cost of Monotype composition is made up of many items besides the wages of the keyboard and caster operators Considerable thought has been given to working out the best method of arriving at the complete cost. I had a lengthy treatise last week, showing how a member of the M.U.A. arrived at the cost of display type. But one great principle needs to be kept in mind. The System should show you the *complete* cost compared with the price at which you are selling the product. Subdividing of cost is the only satisfactory way of telling you where you can safely reduce the cost. But you also want to know, if you are selling composition at say 2s. 3d. per 1,000 ens, whether it is costing you 2s. or 2s. 6d.

"Then if you go in for book production you want to know something of publishers. They do not *all* tell you of the difficulties you will need to provide for and allow for in your costs —*e.g.*, author's corrections, keeping type standing, proofs, paper supplied, storing printed quires. Although *old*-established book printers are to-day being paid for all such items, new concerns are invited to overlook such expenses and be gratified at being given a start in such a lucrative territory, and are pressed to drop these reasonable charges."

In conclusion, Mr. Goodwin emphasised the importance of all monotype users training sufficient men and keeping up their quota of apprentices. Also he urged all members to complete and return their staff figures, to enable statistics to be prepared.

Mr. G. S. Unwin followed, and supported the suggestion that there should be no departure from such well-established customs as charging for authors' corrections, standing type and storing customers' stock. No difficulty was experienced in dealing with reputable publishers.

Mr. G. P. Reveirs, chairman of the London and Home Counties M.U.A., endorsed these remarks, and pointed out the importance of accuracy in charging for authors' corrections; whilst unnecessary details should not be furnished, these should be readily available for reference.



Thanks to the chairman were accorded after animated discussion on many topics.

MR. JOHN PATRICKSON BOULTON, of Barrow-in-Furness, resident managing director of the *Barrow News and Mail*, Ltd., left £3,761 (net personalty nil).

Australian Notes.

Pulp from Australian Wood—The Tasmanian Experiments — Mr. Avery's Report—Melbourne Newspaper Deal—Melbourne Paper Closes Down—The "Sydney Sun" Sales Record—Will of Mr. Robert Sands—Simmons, Ltd.—Boxmakers' Dividend—Wage Reductions—Trade Union's Progress—State Printing Abandoned—Large Newspaper Press Installed—Commercial Items—A Protection Proposal.

(From Our Sydney Correspondent.)

MR. D. AVERY, director of the Amalgamated Zinc, Ltd., has returned to Australia on the completion of his mission to Europe, where experiments were made with a view to testing the suitability of Australian timbers for the manufacture of paper. Mr. Avery took with him on his expedition 100 tons of beech and eucalyptus timber from Tasmania, and on his return to Melbourne he described the results as most successful. The pulp into which the Australian wood was converted in Holland was taken to English mills and there turned into paper of the best texture. Samples of this paper were, at the time of Mr. Avery's return to Melbourne, on their way to Australia.

WHILE Mr. Avery described the experiments as most successful, he would not commit himself definitely as to whether the Amalgamated Zinc, Ltd., would embark on the new industry. He has yet to discuss the matter with his co-directors, when certain details will have to be considered. His report, it was intimated, will be optimistic; and it is assumed that if it is decided to establish paper mills, these will be situated in Tasmania.

THE *Sun* Newspapers (Melbourne), Ltd. intimate that the *Evening Sun* has ceased publication and that the *Sun News Pictorial* has been disposed of at a thoroughly satisfactory figure to the *Herald* Proprietary, by whom it will be taken over at an early date. According to a statement by Sir Hugh R. Denison, chairman of the *Sun* Newspapers (Melbourne), Ltd., the financial success achieved by the *Sun News Pictorial* has been nullified by the loss on the *Evening Sun*. The former periodical is a morning illustrated paper.

NEW records in circulation are set up by the *Sydney Sun* for its daily and Sunday issues. The average sales during the January-March quarter of the present year give the figure of 1,349,342 copies each week. The daily circulation for the quarter was 184,925 and for the Sunday issues 239,892. In the preceding quarter, October to December, the daily figure was 185,236, and the Sunday circulation 237,781.

THE late Mr. Sands, left estate valued at £40,884. He directed his trustees to set apart 1,000 shares in John Sands, Ltd, and to pay the dividends arising therefrom to Mr. Herbert Price as long as he continues to be general manager.

New Trade Marks.

PRESSOGRAPH.

456,986. Paper (except paper hangings), stationery and bookbinding. Robert Hermann Ferdinand Timme, 12 and 14, Underwood-street, City-road, London, N.1; printer and stationer.—March 7th, 1925.

(a Corporation organised under the laws of the State of Pennsylvania, United States of America), corner of Front and Market-streets, City of Chester, State of Pennsylvania, United States of America; manufacturers.—February 5th, 1925. Address for service in the United Kingdom is, care of Haseltine, Lake and Co., 28, Southampton-buildings, London, W.C.2.

Marking British Goods.

The National Union of Manufacturers have been pressing for a long time past for the introduction of an up-to-date Merchandise Marks Act, whereby it is made incumbent upon all and sundry to disclose on their goods the country of origin. At present finished articles of foreign manufacture are freely marketed here at round about the prices of the British equivalent, says a statement issued by the Union, so the purchasing public do not benefit as regards cheapness, and the craftsman is losing his job. British manufacturers have been urged to stamp their goods with their names and the place to which they belong. Some, however, have been rather shy of making a declaration of this nature on the goods they produce, and it is thus impossible for overseas importers and the purchasing public to know exactly what they are buying.

ON the occasion of the annual excursion, or "wayzgoose," of the Wrexham and District Joint Industrial Committee of the Printing and Allied Trades at Llandudno, a bowling match took place on the Llandudno Bowling Club's green for a challenge cup, the teams representing the Master Printers' Alliance and the Typographical Association. The latter were the holders from last year, when they won it at Rhyl, and they now qualified to retain it for another year by beating the Master Printers by 98 points.

Profit Sharing Schemes.

According to returns received in connection with inquiries made this year by the Minister of Labour, there were 225 firms in Great Britain and Northern Ireland who were practising profit sharing or co-partnership at the end of 1924. The number of workpeople employed by these 225 firms covered by the returns received was about 340,000, of whom, it is estimated, about 172,000 were eligible to participate in the benefits conferred by the schemes.

In paper, printing, bookbinding, publishing, etc., there were 16 schemes, of which particulars have been received and 4,268 employees participated. The average amount of bonus per head was £7 15s. and the average percentage addition to earnings was 5·8. Schemes under which no bonus was paid are included for the purpose of calculating the average amount of bonus per head, and the average percentage addition to earnings; but in calculating the latter figure it has been necessary to omit certain schemes in which the percentage could not be stated.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

LETTERPRESS POSTERS.

By ALFRED LANGLEY

(Chairman of the Advertising Committee, Federation of Master Printers: Ex-President, London Master Printers' Association).

In a matter of ten or twelve minutes it is difficult to deal adequately with the subject of posters, or even deal with any one of the many phases of poster advertising. Recognising this, I would prefer to confine my attention to posters as an integral part of the advertising campaign, and the possibilities of letterpress posters as an alternative to the lithographic picture poster where poster advertising is regarded as being too costly. First of all let it be said that there is no greater power of publicity than poster advertising. There is no cheaper means of conveying a message to the public. There is no other medium that reaches so many millions and circulates among so many grades of possible readers.

I do not wish to weary you with figures, but in support of my contention that poster advertising is the cheapest form of publicity, may I give the figures quoted by the Underground Railway of the total passengers carried by their services during the last Whitsuntide?

Whit-Saturday	...	...	6,700,000
Whit-Sunday	...	..	4,000,000
Whit-Monday	...	...	6,300,000
or total of	...	...	17,000,000

of which 13,190,000 were carried by, buses. These figures will give you some idea of the extent of the publicity to be obtained by 'bus and tube advertisements, and it wants but little imagination to realise the number of those who see and read the hoardings and the advertisements at railway stations, or the masses who throng the streets. Newspapers may publish their net sales and the approximate number of their readers, some may possibly boast of a seven figure circulation, but the number of people who see and read posters on the hoardings and in railway stations and advertisements on public conveyances must exceed even the largest figures reached by any newspapers. I do not wish to disparage the value of newspaper advertising to the advantage of poster advertising: each has its sphere and place in the complete campaign. The poster is the bugle call to attention and should be the initial step in a well-planned scheme.

The poster is of necessity a broadcast announcement, the legitimate successor to the town crier of a bygone age. I am not suggesting that the latter official was always clear and intelligible, but the Broadcast Co-

An address delivered to the Printing Session at the British Advertising Convention, Harrogate.

of to-day has set a standard of enunciation, intelligent announcing, and simplified messages for the million that we can at any rate accept. I would have posters conceived and printed on those principles. The object of a poster is to announce—other forms of publicity should be used to amplify. First impressions are frequently very lasting. If the effect of a poster be rapid, it lies dormant for a time often to be recalled vividly when literature bearing on the subject comes at a later date either in the form of booklets or newspaper advertising, thus securing a cumulative value to the effort.

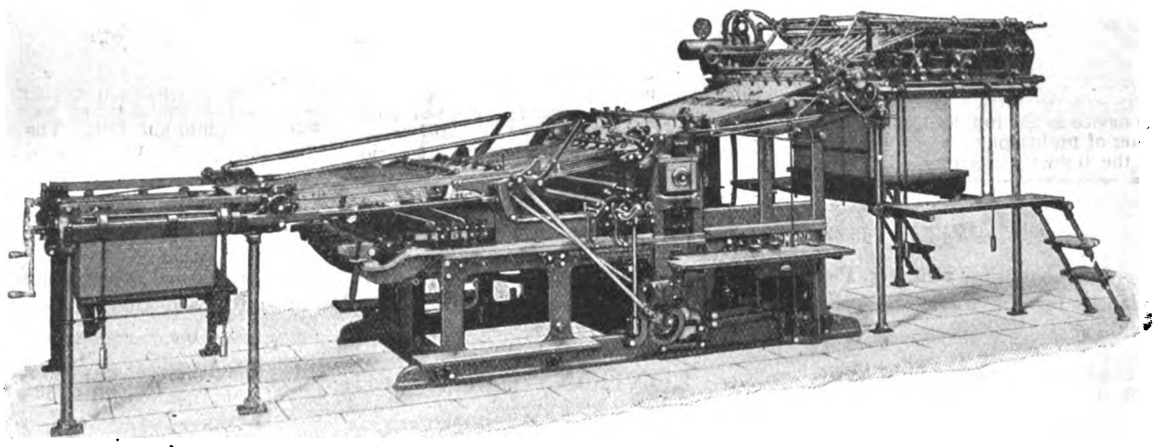
Letterpress as Alternative to Litho.

Now as to the possibilities of letterpress posters as an alternative to the lithographic picture. No would-be advertiser need be afraid of including a poster campaign in his scheme on the ground of expense if he will give the same thought and consideration to the letterpress poster as he has given, or does give, to the advantages and merits of the litho poster. A letterpress poster to-day can be produced with as much character, force, attractiveness and pulling power as a picture poster, provided the advertiser and his printer will exercise the same discrimination and devote the same amount of consideration in its preparation and production.

I could give you many instances, had I the time, to bear out my contention, but two will suffice. During last winter, Bovril issued lettering posters—they may have been lithographed, but to all intents, purposes and appearance, they were letterpress posters—and if you will recall those posters, one was a 48 sheet, "This will be a Bovril Winter" and another read "Bovril puts Beef into you." I venture to think that each of these pure lettering posters gave the message with more force and directness than any of the humorous or serious picture posters they have ever issued. Take the Nestle's milk poster, "Mothers nurse your babies; if you can't—get Nestles," is another example where, compared with any of the Nestle series of picture posters the lettering poster is superior in forceful argument. These posters have the outstanding merit in advertising inasmuch as they convey the message direct in one movement instead of through the medium of a picture or a joke, which at its best must always mean a two-step or indirect method.

One must admit that in the past very little consideration has been given to this branch of printing by printers themselves, and one does not wonder that advertisers have seldom seen what has been done; or had they seen it, they would have regarded the efforts in this direction as unworthy of a second thought. Poster types in the past were crude specimens of advertising, and poster setting and display were so limited by the faces of type available, that even the letterpress printer of the highest ability was unable to give the advertiser the true interpretation of his message or express his ideas with that degree of flexibility so necessary now to scientific salesmanship. I must admit that the printer himself frequently lacked the advertising sense, and too often failed to bring to his work the spirit of advertising so essentiial. Probably he was too much engrossed in the practice of his most exacting and all-absorbing craft.

With a demand for a wider interpretation of the advertiser's needs, the printer of to-day has become a live force and the main factor in all advertising where practical knowledge of typography and technical details are so essential. Beautiful types are now available with outlines infinitely superior to much of the litho lettering. Families or series of these faces are available in all sizes, so that the beauty, spirit and feeling required can be expressed in uniformity of style without monotony. This gives the compositor flexibility and elasticity that hitherto could only be exercised by the artist or lithographer.



Linoleum Process.

I would like to touch briefly upon a method of production that has emerged from the experimental or dilettante stage to the commercial and practical application, and that has been termed the lino-cut process—the method of reproducing drawings, designs, and lettering by engraving or cutting on a "composition" or prepared linoleum. By this process it is possible to get all the effects, expressions and feeling of the old wood engraving and many of the effects obtainable by litho; it is a return to the beautiful hand work of the craftsman. The cost of production when all is taken into consideration is considerably less than litho, for those designs that are suitable; while the plates are produced at about ¼ the cost of line zincos, and where handling has to be considered the weight can be expressed in ounces against the pounds when compared with litho stones. Lettering of every description can be cut, silhouette designs, bold illustrations, impressionist pictures and borders can be employed to lend additional charm to the letterpress poster, rendering it a very possible rival to litho printing, and a practical as well as economical proposition where cost has to be considered.

The Miehle

WITH AUTOMATIC PILE FEEDER AND A PILE DELIVERY

The Miehle can now be supplied, as here illustrated, complete with the Pile Suction Feeder (with sheet-turning arrangement for perfecting) and Pile Delivery. Full particulars of these additional units will be supplied on application.

An important feature of the Feeder is an arrangement whereby it is unnecessary to disturb the pile of sheets when printing the reverse side. To feed the sheets and turn them over, the pile is put into the Feeder with the leading edge towards the outer feed roll. By this means the sheets are automatically reversed and come down on to the feed board the right way up. Thus there is no re-piling or turning over of sheets by hand, or re-piling or turning of the sheets when working a second or third colour on either side.

It is suction fed, the pumps for creating the vacuum for the suckers and the compressed air for the blowers being of the rotary type, driven by a small independent motor. Each sucker head carries two suction arrangements, two blower arrangements, and two sheet grips. A sucker head is also carried on the control for the height of the pile.

This Feeder, which is carefully designed and well constructed, is provided with safety devices which include multiple-sheet and no-sheet trips. The pile is automatically controlled, so that it is kept always at the right height for feeding.

The Pile Delivery deposits sheets clear of the machine, printed side up or down, on to a board or truck which automatically adjusts itself to the correct level throughout the run. The sheets as they fall on to the Delivery are automatically knocked up and keep the pile even on all sides. A blade is supplied for fitting over the centre of the board or truck for dividing slit sheets. Special provision is made for preventing the sheets from curling on their passage down the delivery tapes. The delivery can quickly be altered from face-up to face-down, or vice versa. Trucks for the removal of the pile can be wheeled in from both sides of the delivery.

The Miehle, the Pile Feeder, and Pile Delivery are manufactured by

Essential Points of Posters.

In a paper I read to the London Society of Compositors' Jobbing Guild I ventured to give a few of the essential points of a poster. First, it must give information. Second, it must give information in a manner that shall compel attention. Further, it must be suitable in style to the subject it advertises. On reflection, I do not think any students of the essentials in advertising will disagree with my contentions. If that may be assumed, what can we say of some of the picture posters that are issued? In order to give a familiar instance of what I wish to convey, may I venture to repeat my criticism of the Wembley posters issued last year? You may call to mind a series of beautiful 16 sheet posters on the hoardings last year—each had a mythical but strange device at the top, and underneath was a chapter of philosophy purporting to be relative to the industry or art which the device with a very obscure meaning was supposed to illustrate. While no doubt all of us were capable of appreciating the beauty of the poster as an example of the art of the printer, I venture to assert they were failures as posters, for they did not possess any of the necessary qualifications of a poster as such.

A poster that was intended to attract many millions of visitors to a big show like Wembley needed to be a clear call to the man in the street, and not an enigma. A few might have had the ability to discern or discover the hidden meaning of the devices and their reference or relevance to the wonders at the Exhibition, and a few literary highbrows may have been interested in the philosophic paragraphs; but many millions were needed at Wembley to ensure its success. and the appeal should have been made to the masses.

Enigmatic "Art."

A poster fails as a poster just as much as an Epstein panel fails as a Hudson Memorial, if an interpreter be needed; and while we are pleased to see the standard of art raised and the quality of posters improved in all directions as an advertising force, dignified simplicity and a direct appeal by the straight message to the home and those who have to cater for it need never fear to compete with obscure meaning designs, studies in morbid anatomy and psycho-analysis, or even humour on the hoardings. The poster word becomes the household word. The names of goods sold by the printed poster word become household words, and that is the first principle in advertising.

There is a doubt in my mind whether the poster that depends upon humour—unless not directly relevant, the pun or the paraphrasing of a well-known quotation, or even humour directly relevant—however good the poster may be from the artistic or production standpoints, fulfils its true mission according to the essential points.

We who are interested in advertising should pause and consider very carefully before striving for originality for originality's sake—the worst form of egoism and a true symptom of mediocrity in art. "Art for Art's Sake" is a very laudable ambition in a world that knows no buying and selling or in a nation that has no income-tax demands. The poster is the big shout in the passing show, or the megaphone in the commercial fair, and passers by have no time to try and discover what the artist thinks he sees in the soul of his model, or to visualise his nightmare, however vivid it may have been to him.

CELLULOID PRINTING SURFACES.—A process has been invented (French patent 589,348, May 27th, 1925, Deutsche Renck Rapide Klischee Anstalten), by which the surface of celluloid is reduced to a thick paste by a solvent containing glacial acetic acid, and is then covered with a coat of aqueous gelatine mixed with glacial acetic and glycerine, to be chromed after solidification, then exposed to the light, and finally successively treated with a solvent of the parts of gelatine not printed by light and a solvent of celluloid. In this process the coat of aqueous gelatine forms with the softened celluloid a close mixture, which congeals rapidly; when subsequently chromed an image is reproduced on it by a suitable photographic process, with or without a screen. Finally, this coat is successively treated with a solvent of the parts of the gelatine not printed by light, and then a celluloid solvent. Thus these blank parts of gelatine are eliminated, whereas those printed by light, as also the subjacent coat of celluloid closely mixed with the gelatine, are not attacked by the solvent, but remain as they were after being chromed and treated by the photographic process.

Moisture in Paper.

Its Effect on Ink.

We are making no attempt here to completely cover the subject of ink and its relation to paper. We do want, however, to mention the relation moisture in paper has to the proper working of ink.

There are two ways in which ink dries; one is by absorption, the other is by oxidation. Ink dries on plain and dull surfaces and on uncoated papers largely by absorption, while just the reverse is true in the case of highly coated papers, where of necessity ink must dry largely by oxidation.

If inks mixed to dry largely by absorption are applied to a sheet of paper which already contains an excessive amount of moisture, it is obvious the paper cannot absorb or set the ink as quickly or as readily as it should. Such conditions will tend to increase off-set and smooching.

Two-tone inks require very careful consideration of moisture in paper. The stain in a two-tone ink applied to a sheet of paper containing excessive moisture will "spread" or "crawl" from the edge of the halftone dot to a larger extent than on a paper with less moisture. If paper is too dry the stain in two-tone ink may strike through the sheet, the dry paper absorbing the free stain very quickly, even to the extent of showing on the reverse side, and it may show absolutely no two-tone effect.

These are a few of the troubles likely to occur in applying ink to paper containing too much or too little moisture. They show, however, the necessity of knowing moisture conditions if quality printing is to be produced. Likewise, these conditions must be uniform and consistent through the run. It may seem a bit far-fetched to lay these ink receiving problems to conditions on the wet end of the paper machine, but the fact remains that every step in the sequence of making a sheet of paper bears a certain relation to the finished condition. It will be interesting, perhaps, to trace back through a few of these steps.

Eliminating questions of storage and finishing, and getting directly back into the machine room, we find that where the sheet is to run through a stack and has certain areas more moist than others, a slightly higher polish occurs on these moist areas, and while the sheet may ultimately contain a uniform moisture, these more polished areas have somewhat the effect of a coating which tends to resist the absorption of ink.

Relative Dryness.

The question now arises as to the reason for any moisture in a sheet which has just come off the driers. It might be stated that it is not so much a question of sensible moisture as the relation in moisture content between adjacent areas. While the drier cylinders are hotter at the ends and tend to dry a sheet out more along the edges, there is a fairly uniform drying effect along the middle portion of the cylinder so that the sheet passing into the driers without a uniform moisture condition cannot dry uniformly if certain portions of the sheet are wetter than others. The driers simply increase the relative dryness of the web and of course cannot bring all portions to the same degree of dryness.

If a sheet comes into the dryer in such a condition, we must look into the wet end and there we find the most important factors controlling the ultimate moisture absorbing and moisture retaining qualities of the sheet. The first factor here is one where water is removed from the sheet by pressure and capillary action. The wet sheet is in contact with the woollen felt whose fibres act somewhat as a lamp wick in that they attract water from the object in contact with them. To aid this, we pass the felt and sheet through press rolls whose function is to surface the sheet as well as to drive water out into the felt. The water which the felt carries must be removed to leave its fibres free to soak up more water as they come in contact with the sheet again. If certain portions of the felt have a greater capacity for pulling and holding this moisture, it may be due to conditions incidental to the manufacture of the felt or to conditions present in handling and running the felt.

Where the Papermaker can Help.

If portions of a felt cannot accept this moisture, it must be because they are still busy holding on to something else. It may be oil, grease, filler, colour, pitch, short stock, or one of a number of other undesirable classes of felt-filling materials. Obviously, if a felt is to be free to accept water, we must get rid of this foreign matter before that portion of the felt comes in contact with the web again, and here is the point where the papermaker can, by his careful attention and interest, save himself and his company a great deal of trouble later on. He can see that his suction boxes are pulling equally across the felt so as to extract the same amount of water in each unit of width; that the shower pipes are clear and throwing the same amount of water on the felt all the way across; that the whipper is exerting sufficient slap to the felt to drive it away from these undesirable particles, and yet is not so violent as to abnormally shorten the length of life of the felt; that his press rolls are in a condition to press out the right amount of water all the way across; to wash his felts whenever there is evidence of a lack of uniformity in their porosity.

It is true that water is being removed from the sheet even before it reaches the presses, but it must be realised that much of this removal is by gravity and by capillary attraction between the table rolls and the wire. The uniformity of this water removal, of course, depends on the formation of the sheet, but it is generally pretty constant throughout the width. The suction boxes on the wire must be free and pulling uniformly also, but the fact remains that more careful attention to the felts will result in more satisfactory conditions in the rest of the journey of the sheet to the press room, and if the paper manufacturer is interested in having his product looked upon by careful printers more favourably, it behoves him to start in his investigation by giving careful consideration to the question of felts.—*Alfelco Facts.*

WHY YOU SHOULD USE TYPON

TYPON gives per fect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON requires no oiling or special treatment in developing; highly skilled labour is therefore not required.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase. Typon material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON adds to the resources of the Litho and Planographic Printer and reduces his working costs.

TYPON PAPER NEGATIVES

SOLVE your photo-reproduction problems for you!

They are cheaper, quicker, easier to handle, and better in every way than any other method.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

MESSRS. ANDREW LEVY AND CO., LTD., envelope manufacturers and wholesale stationers, Great Junction-street, Leith, have purchased the extensive premises in Constitution-street, Leith, formerly occupied by Messrs. William Hall and Son, cabinet-makers, etc.

DISSOLUTION of Partnership is announced between C. H. Collins, A. E. Pomeroy, and C. E. Oates, fine art publishers and printers, 70, Hampstead-road, under the style of Thomas Ross and Son; also between A. Hemingway and J. M. Beaumont, wholesale stationers, fancy goods and toy merchants, formerly at 9a, Market-walk, Huddersfield, York, but now at 3a, Chapel-hill, Huddersfield aforesaid, and Springdale Mills, Longroyd Bridge, Huddersfield, under the style of Chas. E. Walton and Co., the Continental House, and North British Wood Toy Co.

WALBROOK AND CO., LTD.—A meeting of creditors will be held at the offices of Messrs. Walbrook and Hosken, solicitors, 4, St. Paul's Churchyard, E.C., on Friday, the 17th inst., at 11.30 a.m. Mr. L. A. Reddall, 1, Guildhall-chambers, Basinghall-street, E.C.2, is the liquidator of the company.

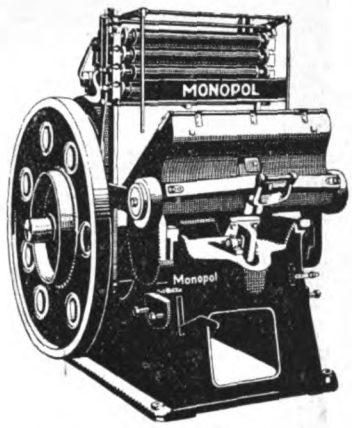
THE *Torbay Express*, the first evening paper to be issued in Torquay, the editor-in-chief of which is Sir James G. Owen, of Exeter, has been amalgamated with its rival, the *Torbay Herald*, which is an offshoot of the *Western Morning News*, Plymouth, now the property of Mr. Harold Harmsworth. When the necessary extensions and alterations have been made the amalgamated paper will in future be published from the offices of the *Torbay Herald*.

THE proprietors of *Reynolds' Illustrated News* state that rumours that negotiations are proceeding with the Right Hon. J. H. Thomas, M.P., for the purchase of *Reynolds' Illustrated News* are untrue; the further suggestion that the Right Hon. J. H. Wheatley, M.P., has made an offer for the paper is equally inaccurate.

RATING BILL PROGRESS.—In Standing Committee last week Mr. Neville Chamberlain, answering Mr. Sidney Webb, said there was no foundation whatever for the report that the Rating and Valuation Bill was to be dropped. Clause 17 was discussed and eventually added to the Bill. It provides that "there shall be established in every county a committee of the County Council called 'the County Valuation Committee,'" and defines its constitution.

WE regret to announce the death of Mr. Geo. W. Lockwood, governing director of Messrs. Geo. W. Lockwood, Ltd., printers, Atlantic Works, City-road, Manchester, the sad event taking place on the 3rd inst. at his residence, "Southbank," Hale, Cheshire, in his 76th year. Up to six months ago Mr. Lockwood had taken an active part in the business, which was founded by him in 1877. In April this year the business was formed into a private limited company. Mr. Lockwood will be succeeded by his only son, Colonel G. P. Lockwood, M.C., who, with the exception of his absence on active service throughout the war, has always been closely connected with the business.

MR. FREDERICK GEORGE HOLE, senior representative of Messrs. Underhill, Ltd., printers and stationers, Plymouth, passed away on Sunday after a short illness, aged 57.



THE death has occurred of Mr. Charles Heath Lemon, who was for 30 years the Newcastle representative for Messrs. Hudson and Kearns, Ltd., stationers and printers, London.

NEVER having got over the loss of a son in the battle of Jutland, the news that another son had been drowned in China further depressed George Sydney Waterlow (73), and on Thursday he was found shot at the Grand Hotel, Plymouth. At the inquest a verdict of suicide while temporarily insane was returned.

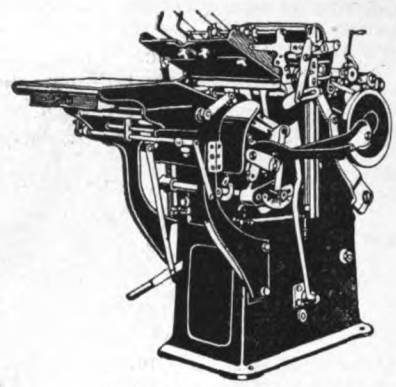
IT was announced at a meeting of the Torquay Corporation last week, that the Mayor had extended an official invitation to the Master Printers' Federation of Great Britain and Ireland, the Bill Posters' Association and the British Advertising Convention to hold their respective annual conferences at Torquay in 1927.

THE *Daily Telegraph* film, "Behind the Scenes of a Great Newspaper," is shown each night this week at the Tivoli. The film, which is of considerable interest to all newspaper readers, depicts the production of a modern newspaper in all its stages, from the first process of paper manufacture to the final printing and distribution.

Regardless
of
The PLATEN You Buy
or
The Price You Pay
There is
No Greater Value
Than MONOPOL.

Built in three Sizes.

The "MONOPOL" Art Platen



is specially built to produce the very Heaviest Tint and Register Colour Work at a High Speed.

Camless Drive of Roller Carriage.

Throw-off of Inking and Distributing Rollers from each other, and from the Inking Cylinder by a single lever movement.

Separate Drive for Inking Rollers, permitting inking-up without running machine.

Automatic Hand Safety Guard.

Built in three Sizes.

The "MONOPOL" Safety Platen

is the *fastest* and most up-to-date hand-fed Platen on the market.

Speed Range: 2,000-3,500 impressions per hour.

The impression is automatically thrown off in case of a misfeed.

The sheets are fed by hand to front gauges on a sloping feed board, in a similar way as on a cylinder machine.

PRINTED SIDE UP DELIVERY, each sheet being in full view of the operator.

The delivery device can be raised out of position in a few seconds to allow for easy access to the platen.

Can be seen in London and Provinces.

Sole Agents:

36-38, Whitefriars Street,

W. J. LIGHT & Co LIMITED

Fleet Street, London, E.C.4

Telephone: **CENTRAL 3839.**

MR. JAMES HENRY GOLDSMITH (68), of Southampton, lately general manager and editor-in-chief of the *Hampshire Advertiser*, the *Southern Daily Echo*, and associated newspapers, left £14,502 (net personalty £12,628).

TELEGRAPHING PICTURES.—Noteworthy as a practical application of picture telegraphy, was the fact that the London *Daily News* last week published pictures of the California earthquake just eight days after the disaster. The photographs were taken at Santa Barbara, in Southern California, and carried by aeroplane 350 miles to San Francisco. They were then telegraphed across the United States, a distance of nearly 3,000 miles to New York in time to catch the mail to England. The apparatus used is operated by an intense beam of light shining through the photographic film to be transmitted on to a photo-electric cell. As the film is rotated the varying density causes a varying electric current to pass. At the receiving end a beam of light actuates in a similar way on to an unexposed film, thus producing a replica of the film transmitted.

RESTRICTION ON ADVERTISING.—The new draft regulations, just issued by the Ministry of Transport, state that no advertisements shall be paraded or distributed in the London streets (newspapers being excepted from the operation of this clause); that no animals or persons in fancy costumes shall be used for advertisement purposes; and that no person shall be permitted to use a vehicle solely or mainly for such a purpose. It is expected that the regulations will not take effect for at least three months.

FOR forging English banknotes, a former Russian officer named Vasilli Mamoroff, was sentenced in Berlin on Thursday to two and a half years' imprisonment.

MR. WALTER TURNER, founder of the *Mexborough and Swinton Times* Publishing Co., has died at Bridlington in his 73rd year.

Litho Plates Made by Photography.

Ogden Multiple Duplicating Machine.

The lithographer who prints wholly or in part from photographically produced plates cannot but be interested in an apparatus for the production of such plates. If he is considering the acquisition of plate-making plant his interest is of a very practical character, and even if the extent or nature of his business does not warrant the installation of a large equipment he likes to know what apparatus for the purpose is on the market and to have some idea of its special features. Accordingly we were interested to receive an invitation to inspect the Ogden Multiple Duplicating machine, to which reference has previously been made in our pages. It will be remembered that there was some expectation of an Ogden installation being on show at the Printing Exhibition, but that it was found impossible to complete the arrangements in time.

The Ogden Multiple Duplicating Machine.

The accompanying illustration provides a good general view of the Ogden machine, and conveys the idea that the Ogden is a very substantial piece of apparatus—as indeed it is. A medium-sized machine weighs nearly a couple of tons, and covers a floor space of about 100 square feet. The machine appears to be very strongly built, and bears the marks of first class engineering skill in its construction and finish. It is an example of precision engineering, the claim being made that the accuracy of the screw mechanism, etc., is such that movements of the printing plate can be controlled to 1/1,000th of an inch.

The machine has a dual purpose, being adaptable either for printing down a negative in multiple repetition upon a zinc or aluminium printing plate, or for making a multiple negative, to be afterwards reproduced upon a printing surface. That is to say, if a negative (either single or multiple) is supplied, the machine will print this down upon metal accurately stepped out in accordance with any desired plan of repeating and placing the subject on the printing plate. Alternatively, our illustration shows the use of the attachment for negative making, with the use of an incandescent electric lamp. In this process dry plates are commonly used, but films can be used if desired, and a positive is printed in contact, being repeated the required number of times with the requisite positioning, this being done by means of accurate stepping mechanism.

For the production of printing plates it is the central bed of the machine that is employed, the negative being fixed within an immovable holder, and the sensitised metal plate being placed in close contact thereover. Lighting is by arc lamp placed on the floor, an angular reflector being used to direct the light upwards. It is the metal plate and not the negative that is moved for the production of multiple images, the lighting apparatus remaining stationary. The negative can, of course, be either a single or a multiple negative. A special point is made of the means for adjusting the negative; the method employed allows the use of negative glass of any reasonable shape or thickness even of varying thickness; films also can be employed. Great efficiency is claimed, too, for the means of applying pressure during printing, so as to ensure perfect contact over the whole printing surface; the vacuum method is dispensed with, and direct pressure applied. A notable feature of the Ogden machine is that the work of producing printing plates is carried out by daylight.

The Ogden is well known in the United States, where over 60 machines are in actual operation, and several important British firms have already ordered the machine, which is being marketed by the American Machine and Foundry Co., Ltd., of Brooklyn, U.S.A., and 58, Holborn-viaduct, London. We understand that it is open to any one practically interested to arrange for a personal demonstration of the Ogden Multiple Duplicating machine.

Paper Money Forgery Allegation.

Accused Committed for Trial.

In connection with the recent raid at Earl's-court-road, when a considerable quantity of photographic plant alleged to have been used in the manufacture of spurious Post Office money orders, etc., was seized by the police, William Henry Harrison, aged 40, described as an engineer, appeared before Mr. Marshall at West London Police court.

Harold James Gates, process engraver and photographic lithographer, in the service of Messrs. Barclay and Fry, Ltd., contractors to the Government for the supply of Post Office money orders, etc., stated that he had examined the apparatus at Scotland yard, and with those articles and a reversing mirror and lens he could produce the money order forms.

The witness described how this could be done, and, in reply to Mr. Keeves, who defended, agreed that a good deal of the plant would, with additions, be suitable for reproducing etchings, but said that as it was at present it had no commercial value.

Mr. Keeves submitted on behalf of the prisoner that the charge relating to the possession of "bond" paper should be dismissed, as, according to the prosecution, anyone could quite innocently be in possession of such paper.

The magistrate upheld the contention, and dismissed that charge.

On the other charges the prisoner, who pleaded "Not Guilty" and reserved his defence, was committed for trial at the Central Criminal Court.

The "Monomark" System.

Trade Marks to be Obsolete?

An international identification system which seems to hold important possibilities for trade in general, including the printing and allied trades, was explained at a luncheon given at the Hotel Victoria on Thursday. The luncheon was held to draw attention to the aims of a company which has been formed to develop an invention known as "Monomarks," which was devised and developed by Mr. William Morris. Lord Riddell, Sir Howard Spicer and Mr. J. Gomer Berry were amongst those who attended under the presidency of Sir Sydney Skinner.

Mr. William Morris, the originator and elaborator of the system, stated that in the course of everyday business it often happened that manufacturer and buyer, though keenly interested in an article, were unable to get into touch with each other through lack of information. It was with the intention of obviating this anomaly that he had worked out the "Monomark" system.

By this scheme each commercial organisation and individual would become a subscriber to British Monomarks, which would issue to them an individually unique nomination composed of a group of symbols known as a "monomark." This "monomark" would be used as a means of international identification, and would replace such existing systems as addresses, code nomenclature and trade marks. They proposed that manufacturers or merchants should stamp the "monomark" on their wares, or, when ordered to do so, the "monomark" of their customer. Any article whether textile, paper, wood, leather, or any other material might bear a "monomark," which, if necessary, might be as small as a hall-mark. Not only would it be the equivalent of a full name and address, but the first letter of the prefix would establish the country of issue. The "monomark" system, it was added, is being taken up in all civilised countries, and each country will eventually possess a central clearing house to which postal communications bearing the country's "monomark" prefix will be delivered and from which they will be forwarded, untouched in any way, direct to the correct recipient, thus ensuring dispatch, secrecy, direct communication, and preventing forgery.

The legend "Made in England" was often a lie, but "Made in England BCM/H44S" was a signed statement which might be challenged by means of a postage stamp.

Many leaders of British commerce are now interesting themselves in the "monomark" system.

Costing Examination.

The awards of the Costing Examination held at the Stationers' Hall on June 29th, 1925, have just been issued by the examiner, Mr. W. Howard Hazell.

The results are as follows:—

FIRST CLASS.

Smith, M. A. (Miss) Nowell, V. D.

SECOND CLASS.

Philcox, C. H. Wintle, W. J.
Page, J. P. A. Dean, H. B.
Ward, L. H. J. Dodd, C. F.
Chipps, L. C.

Memorial to Sir Arthur Pearson.

A memorial to Sir Arthur Pearson was unveiled last week in St. Bride's Church, Fleet-street, E.C.4, by Lord Burnham.

Lord Burnham said that nobody would deny that the fame of Sir Arthur Pearson should be commemorated in the chosen temple of journalism, for he had been one of the creators of modern newspapers, and nobody had understood more thoroughly the mystery of the newspaper Press. The Fresh Air Fund, which he created, had given millions of poor children the chance of spending some time in the peace and recreation of the countryside. The finest of all his achievements was the foundation of St. Dunstan's.

After the unveiling of the memorial it was dedicated by the Bishop of Kensington.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6

Adverse Balance in National Trade.

THE printing and allied trades are eminently sensitive to the ups and dows that occur in the tide of national prosperity—or adversity; so much so that they are often characterised as being "barometric" of the state of general trade. Optimism in our own particular industry is accordingly made more difficult even than it has lately been, when we learn that the Board of Trade returns, made public at the week-end, indicate a still further movement in the direction of decreasing export trade, which combines with increasing imports to pile up still higher a trade balance that is not in favour of this country. Such figures of the returns as relate to the printing and allied trades—chiefly paper and stationery—show an unhealthy tendency pretty much in keeping with the movement of trade in general. It is, however, some comfort to observe that the figures in this section indicate that the first six months' trading this year compares favourably with that of the corresponding periods of the two preceding years.

F.B.I. Sounds an Alarm.

THE grand council of the Federation of British Industries at their meeting on Wednesday of last week considered a report from the staff on some of the factors which have produced the present trade position, and appointed a committee to consider the report. The report states that the prosperity of British industry before the war primarily depended on a continuously expanding foreign trade, made possible by the continuous investment on a large scale of British capital for the purpose of developing hitherto undeveloped countries; on reasonably stable political conditions, and on a plentiful supply of money involving a tendency for prices to rise throughout the world. In 1914 capital and labour had moved continuously for many years into the great exporting industries, rather than into the industries which worked for the home market, and even in those industries which worked for both markets the tendency had been for a steady development in the relative importance of the export branch to the "home" branch. Since the war, however, precisely opposite economic forces had been at work. British trade since the war had also been affected by heavy taxation, depleting the fund of savings available for industrial and foreign investment, and diverting such savings as were available to gilt edged rather than industrial securities. The influence of the greatly increased expenditure on social services, housing, unemployment relief, education, pensions, etc., had directly stimulated home trade, while at the same time checking export trade by increasing costs through the increase in local taxation and direct contributions, and reducing the funds available for foreign and industrial investment through central taxation. The present condition of trade in the country, the report states, has every appearance of becoming permanent. During the last few months the position has been steadily growing worse, and this at a time when conditions are favourable for improvement.

* * *

"Buy British Goods."

THIS slogan, revived by the Prime Minister and the President of the Board of Trade, formed the theme of the recent British Advertising Convention held at Harrogate. If the problem how to increase sales of British manufactured goods can be satisfactorily solved much good will result. Our workpeople do not lack skill, neither are our manufacturers wanting in enterprise, and, therefore, to galvanise more life into our operations we must enthuse our workers with courage, resolution and optimism. The President of the Board of Trade pointed out that to-day Britain was selling less than 80 per cent. of the manufactures she sold overseas before the war, while her purchases of manufactured goods were up by more than 10 per cent.

Standardisation of Paper and Boards.

Printers and Stationers' Agreement Ratified.

The National Association of Wholesale Stationers and Paper Merchants has recently been in further conference with the Federation of Master Printers, as a result of which it has been agreed to introduce standardised methods of dealing and selling in certain classes of papers and boards. After acceptance by the Wholesale Stationers, the following agreement was finally approved by the Council of the Federation of Master Printers, which met on Tuesday :—

The following standards are mutually agreed, and the members of the National Association of Wholesale Stationers and Paper Merchants will as soon as possible convert their stocks and price lists to conform with the new standards. The Federation of Master Printers of Great Britain and Ireland will actively support the adoption of these new standards by all their members.

These conditions apply to paper, cards, pulp, paste and Bristol boards, but do not include wrapping papers, strawboards and millboards.

Sale by Weight and by Thousand.

All papers and boards to be sold by the thousand sheets. Sheets of paper and boards to be packed in 1,000's, 500's, 250's or 100's, according to size and weight, as may be most convenient. If a master printer requires less than the quantity usually packed, the paper or boards should be supplied in 10, 20 or 25 sheets, or some other decimal part of a thousand.

Standard Sizes.

All papers, cards, pulp, paste and Bristol boards sold under a name, to be cut to standard size, as specified hereafter.

All papers and boards not standard size, to be considered a special or off size, and listed or sold by inch measurement, and not by a standard name.

All papers and boards to be cut square and with clean edges, except deckle edge and hand made papers.

Boards.

All cards, pulp, paste and Bristol boards to be described, at the option of the seller, either by the thickness thereof stated in thousandths of an inch, or pounds weight per 100 boards. A variation of 5 per cent. in thickness or weight either way to be allowed.

Cards to be sold as 50's, 100's, etc., and not in uneven quantities.

The standard size of cut cards to be as follows :—

Name.	Size.
Thirds	$1\frac{1}{2} \times 3$
Extra thirds	$1\frac{3}{4} \times 3$
Small	$2\frac{3}{8} \times 3\frac{5}{8}$
Carte-de-visite	$2\frac{1}{2} \times 4\frac{1}{8}$
Large	$3 \times 4\frac{1}{2}$
Postcard	$3\frac{1}{2} \times 5\frac{1}{2}$
Court	$3\frac{1}{2} \times 4\frac{1}{2}$
Double small	$3\frac{5}{8} \times 4\frac{3}{4}$
Cabinet (Photo)	$4\frac{1}{4} \times 6\frac{1}{2}$
Double large	$4\frac{1}{2} \times 6$
Quad small	$4\frac{3}{4} \times 7\frac{1}{4}$
Quad large	6×9

Marking of Package.

All packages to be clearly marked with :—
1. Quality. 2. Size in inches. 3. Weight or substance. 4. Number of sheets in the package.

Special Makings.

To the order of a customer, paper may be made in any size or number of sheets to the package, but must not be marked with the standard name unless it be in all respects a standard size and thousand. If a papermaker or stationer, to meet his customer's requirements, stocks off-size papers, they must be described by their size in inches and not by a standard name.

Variation in Weight, etc.

The percentage of variation in weight in a thousand, the over or short make in special makings, and the inclusion of the wrapper and string in the weight, as at present agreed by the British Paper Trade Customs, are not affected by these new standards.

Standard Names & Sizes for Paper & Boards

If boards are sold under a name and are untrimmed, they must be of such a size as to cut to standard size.

Papers.—Trimmed.

All double and quad sizes are to be exact multiples of the standard sizes.

Firms' Annual Outings.

Chertsey was the destination of about 90 of the employees of Messrs. Morton, Burt and Sons, Ltd., on July 11th, for their annual outing. In glorious weather three charabancs started from the Bayswater works, reaching the town in time for the occupants to spend about two hours by or on the river before lunch. The directors of the company, Messrs. J. R. Burt, A. H. K. Burt and J. E. Jones, were of the party, and it says much for the friendly feeling prevailing that notwithstanding the attractions of the Regatta very few were absent from the sports in a paddock during the afternoon. Ten short speeches provided diversion after the Royal toast had been honoured at lunch, and before rising from tea the prizes won at the sports were presented. The official programme being completed with the prize-giving, the evening was free for all to spend as inclination prompted, the gaily decorated river naturally claiming most attention until at 8.30 the charabancs were again in motion conveying sun scorched and tired but merry workers back once more to their homes.

The *Western Evening*, Plymouth, had its annual wayzgoose on Saturday, the venue being Bideford, where dinner and high tea were taken, and Westward Ho! Presiding at the dinner, Mr. W. O. Mills, editor of the paper, welcomed by Mr. F. T. Cole and Mr. Uren, the editorial and commercial representatives respectively of the *Herald* at Barnstaple.

The employees of the St. Stephen's Press (the *Bristol Times and Mirror*) held their annual outing at the Wye Valley. The party travelled in motor coaches, taking luncheon at the "Swan" Hotel, Ross, and tea at the "King's Head" Hotel, Chepstow. A message, conveying the thanks of the employees for the outing, was sent to Mr. Herbert Hawkins, managing director.

The American Miehle Company's Presses

A Transformation

is what the American Miehle Company's Vertical Job Press has produced in those Job Departments where it has been installed.

The Vertical attains the limit in **convenience, adaptability, speed** and **quality.**

By reason of these factors it is the greatest money-earner ever placed before Printers. The numerous repeat orders conclusively prove this statement.

Call and let us explain the machine to you—have it demonstrated in our Showroom.

Also trust deed dated June 24th, 1925 (supplemental to trust deed dated January 4th, 1893, securing £20,000 second debenture stock), charged on the same property. Trustees: Sir William L. Grant, K.C.B., New Barn, West Malling, Kent, Admiral of the Fleet; and W. E. Dedrick, Brome House, West Malling.

BANKRUPTCY.

Re JOHN HORN (LONDON), LTD.—This company carried on business as publishers, printers, stationers, etc., at The Vineyard, 97-9, Aldersgate-street, E.C. A compulsory winding up order was made against it last December on a creditor's petition and accounts were prepared showing total liabilities £52,610, made up of unsecured creditors, £6,322; preferential claims, £287; and loans on debenture bond, £46,000; the assets valued at £15,725 are absorbed in the debenture and preferential claims, and the total deficiency to the contributories is estimated at £37,136, the issued capital being 5,000 deferred shares of 1s. each and two ordinary of £1 each. Mr. E. T. A. Phillips, official receiver and liquidator, reports that the company was incorporated as a private company on September 18th, 1923, with a nominal capital of £5,000, and was promoted by William Gardner Sinclair. The directors of the company appointed by the signatories were William Gardner Sinclair and Edward Royden Alltree. On February 25th, 1924, the board appointed Donald Farquhar McDonald Gardner Sinclair as an additional director. The qualification of a director was the holding of one share in the company, but Alltree and D. F. M. G. Sinclair do not appear to have qualified. Their remuneration has never been determined. John Donald Fletcher acted as secretary of the company until February 25th, 1924, when D. F. M. G. Sinclair was appointed in his place. John Horn (London), Ltd. (the old company), was incorporated on May 9th, 1919, and went into voluntary liquidation on August 22nd, 1923. By an agreement dated July 25th, 1923, made between John Horn (London), Ltd. (the old company) and William Gardner Sinclair, the latter purchased, as from March 31st, 1923, as a going concern, the goodwill, exclusive right to use the name John Horn (London), premises, plant, etc., and the benefit of all pending contracts in connection with the business of box-makers and cardboard manufacturers carried on by the vendor company at Vine-yard, Aldersgate-street, London, E.C. The consideration was the payment of £46,000, and payment by the purchaser of all outstanding liabilities of the said business. The agreement provided that the purchaser should proceed to form a new company with a nominal capital of £5,000, and should give a first mortgage debenture constituting a floating charge on the undertaking of the new company, and all its assets present and future for the purpose of securing the due payment of the consideration of £46,000 The debenture to contain a provision that in the event of any of the payments of £9,000 becoming unpaid the whole amount should immediately become due and enforceable. The company carried on business at Vineyard, Aldersgate-street, London, E.C., the lease of those premises having been granted to John Horn (London), Ltd. On September 28th, 1923, the directors passed a resolution creating a debenture for £46,000 carrying interest at 5 per cent. per annum from September 28th, 1927, and the same was isued to Reginald Charles James Goodrich, liquidator of the old company. Alltree states that Sinclair had a very serious breakdown in health, which ultimately resulted in his being confined in a mental home, and it was a great shock to all concerned when it became apparent that Sinclair was unable to meet the payment due under his guarantee. D. F. M. G. Sinclair states that on February 25th, 1924, he was appointed by the board as managing director and secretary of the company. Owing to the continued illness of Sinclair the official receiver has not been able to obtain any information from him regarding the company's affairs. Accounts prepared on behalf of the company disclose that the result of its trading for the six months ended March 31st, 1924, was a net loss of £5,239 6s. According to such accounts the loss incurred prior to the date of incorporation was estimated at £2,975 10s. 9d. A board meeting was held on October 8th, 1924, when it was reported that a demand had been received from the debenture holder for payment of the instalment of £9,000 due on September 28th, 1924. The managing director reported that neither the company, nor his father, the guarantor, were in a position to pay the same. On October 9th, 1924, the debenture holder served notice upon the company for payment of the £36,000, due under the debenture within seven days. On October 17th, 1924, the debenture holder took steps to protect his security and appointed Mr. Alan Clarke Vincent, incorporated accountant, of 13, Queen-street, London, E.C., as receiver on his behalf. The failure of the company is attributable by its officials to trade depression, the inability of W. Gardner Sinclair to pay the amounts due under his guarantee, and to his breakdown in health, which prevented him giving the necessary attention to the company's business.

Successful Gala Day.

As a sports gala, "Printers' Day" at the Headingley Grounds, Leeds, has become one of the principal athletic gatherings in the city. Organised by the Leeds and District Printing and Allied Trades in aid of printers' charities, the gala has now reached its fifth year, and Saturday's record attendance should bring a considerable addition to the sum of £500 which has been distributed among the charities during the past four years.

The meeting has not always been favoured with fine weather, but there was no fault to find on this score on Saturday. A varied and attractive programme provided many close finishes, and altogether the afternoon was a distinct success. Mr. Robert D. Chorley, President of the Executive, undertook the duties of referee, and the judges were Mr. J. Blakley, Mr. H. Wood, Mr. F. Daniel, Miss P. Huddleston, Miss A. Hewson, Mr. C. H. Lister, Mr. F. Thorpe, Mr. J. Innis, and Mr. E. Ellyard. A fancy dress parade provoked keen competition, the judging of this section being carried out by Mr. R. L. Matthews (Chief Constable), Mrs. Matthews and Miss Matthews, assisted by Mr. Benn, manager of the Empire, and Mr. Brown, manager of the Hippodrome.

The prizes were presented by the Lord Mayor and Lady Mayoress (Mr. and Mrs. C. G. Gibson). On her arrival the Lady Mayoress received a beautiful bouquet from Miss Huddleston, and in turn presented Miss Huddleston with a handbag, given by the Leeds and District Master Printers' Association as a recognition of the work Miss Huddleston has done on behalf of the gala since its inception.

A lengthy programme of music was played by the Leeds City Prize Band, and during the afternoon massed gymnastic displays were given by the members of the Salem, Armley Old Boys and Armley Gymnastic Clubs, under the personal direction of Mr. E. Ellyard. Other attractions included simultaneous Indian club exhibitions by Mr. W. Oldfield, Mr. P. Bickerdike, Mr. C. Shillito, and Mr. J. Atkinson, while Mr. P. Bickerdike and Mr. H. Oates gave a display of ju jitsu. An additional attraction in the veterans' race is promised for next year, Mr. Benn having intimated that he will give a trophy to be held each year by the winner of this race—three victories by the same man to make him the owner of the trophy—and in addition a memento for the winner each year.

The results of the principal events were as follows:—

100 yards flat (Dickinson Trophy)—1, N. Pullan; 2, E. Fish; 3, W. E. Howland.

440 yards flat (Chorley Cup)—1, W. E. Howland; 2, F. Kellet; 3, S. Beaumont. Time 57 2-5s.

Veterans' 60 yards flat 1, A. Shanks; 2, J. Smith; 3, J. A. Freeman.

Mile relay (Technical School Cup)—1, Electro Plate Works; 2, *Yorkshire Evening Post*.

High jump—1, A. Ingleby, 5ft. 2in.; 2, D. Cunliffe, 5ft.; 3, S. Beaumont, 5ft.

Tug of war (Jubb Shield)—Geo. Mann and Co's Larchfield Work's Team.

Women's Tug of War (Richardson Shield)—1, J. Waddington's "A" team.

Three-quarter-mile ladies' walk (Gilchrist Trophy)—1, E. Asquith; 2, B. Blackburn; 3, A. Stoddart. Time 6m. 1 1-5s.

Fancy dress, ladies—1, E. Connell as "Boxing"; 2, Alice Smith as "Eliza Comes to Stay"; 3, E. Cooper as "A Lily." Men—1, E. Shelley as "An Eastern Beggar"; 2, W. Mountain as "A Chinaman."

Paper Box Trade Inquiry.

The official inquiry under the Trades Boards Act into the paper box trade, which was to have been opened at 5, Old Palace-yard, Westminster, last week, has been adjourned until Monday, July 20th, at 11 a.m., when evidence will be taken.

B. Sculthorp and Son, Ltd. (office suppliers, stationers, etc., London).—G. A. Ashcroft of 1, Camberwell-grove, S.E., ceased to act as receiver or manager on May 23rd, 1925.

Personal.

Viscount and Viscountess Burnham, the Rt. Hon. C. W. Bowerman, M.P., Sir William and Lady Davies, Sir Emsley and Lady Carr, Mr. J. E. R. Findlay and Sir Harry Brittain sailed from Southampton on Saturday in the "Empress of France" *via* Canada to attend the third Imperial Press Conference in Australia.

Sir Albert Spicer presided at the Foundation Day celebrations and the distribution of prizes at the Mill Hill School on Thursday.

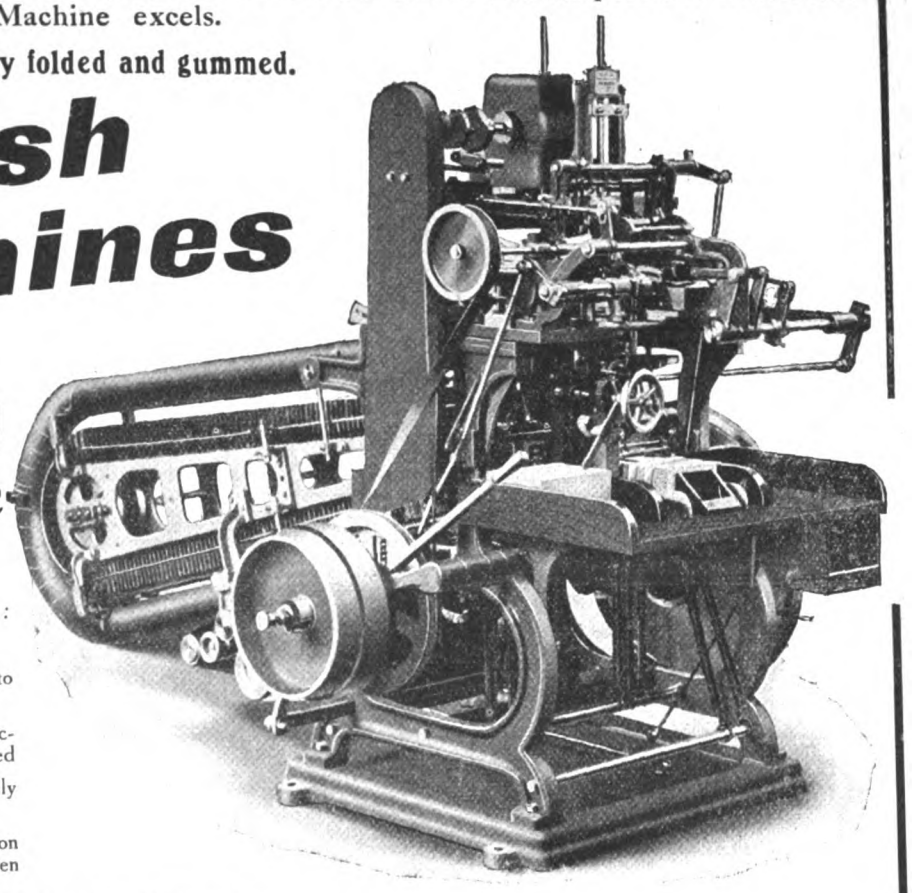
Mr. P. N. McFarlane, a director of *Graphic* Publications, Ltd, has been appointed publishing manager of Messrs. Cassell and Co., and has been given a seat on the directorate. He will also act in an advisory capacity in connection with the various publishing and newspaper interests of Sir William Berry and Mr. Gomer Berry.

Mr. Sidney F. Wicks has been appointed a director on the board of Cross-Courtenay, Ltd., printers and advertising consultants, 7, Brazennose-street, Manchester.

Hearty congratulations to Mr. Charles Baker and Mrs. Baker on their golden wedding, celebrated on Tuesday, the 14th inst. Mr. Baker is the founder and proprietor of our esteemed contemporary, the *Newspaper World*.

Mr. Edwin Ombler, of Messrs. Ombler and Sons, Ltd., printers and paper-bag manufacturers, Hull, has this month completed fifty years of business life. To celebrate the occasion the employees were taken to Lake Windermere for the annual outing.

Mrs. Amelia Beatley, a pensioner upon the funds of the Printers' Pension Corporation, received a congratulatory telegram on her 100th birthday from Sir H. Morgan, president of the Corporation's festival in November next.



In the making of Envelopes one of the things that count is Speed—Quick Delivery for the Customer and a High Rate of Production for the Manufacturer. SPEED plus EFFICIENCY are two of the points in which this IMPROVED TYPE of BRITISH Made Machine excels.

60,000 to 70,000 Envelopes per day, perfectly folded and gummed.

Buy British Machines

The High Speed "LEADER" Envelope Folding and Gumming Machine

is a Tremendous Asset to the Plant of any Up-to-date Envelope Manufacturer.

They are giving Real Production because they have:

1.—Semi-Rotary Plunger Drive. No Cam. (Patented).
2.—Adjustable for any size within fixed range.
3.—Improved Rotary Delivery, Grippers eliminated (Patented)
4.—Wipe Gumming of the Tip retained, at High Speed, by new mechanism (Patented).
5.—Improved Hot Air Drying arrangement.
6.—Continuous Chain Drive.
7.—Disengaging Gear fitted to Gum Boxes.
8.—Gum Boxes that are very accessible and easily replenished
9.—Recorders for counting Daily Output.
10.—Front Crosshead mounted on pillars, making machine open and accessible.

Printers' Managers and Overseers

(PARENT) ASSOCIATION.

Annual Report and Accounts.

When the president, Mr. R. H. Berry, opened the proceedings of the July meeting of the P. M. and O. A. at the "Old Bell," Holborn, on Tuesday of last week, the gathering was small, but it quickly improved to an attendance worthy of the important agenda to be presented. The principal business was to receive the annual report and accounts of the whole Association for the year ended April 30th, 1925.

The president referred with regret to the death of Mr. J. J. Smith, an old member who had taken a very active interest in the Association and had served on the council as well as having frequently assisted as raconteur at meetings of a social kind. The president expressed the Association's indebtedness to Mr. S. A. Dawson, who had acted in very brotherly fashion towards Mr. Smith and his family in their sad experience. All present then stood in silence to the memory of the deceased.

Four candidates for membership were present, and, after election, received a very cordial welcome from the president and the meeting. These were: Mr. J. Bell (Messrs. Shirley and Co., Holloway-road, N., overseer, letterpress department); Mr. F. H. W. Fox (the *Christian Herald* Co., Ltd., overseer, letterpress machine department); Mr. E. Mills (Messrs. Mansell, Hunt, Catty and Co., Ltd., Cressy-road, Hampstead, N.W., overseer, letterpress machine department); and Mr. S. Patterson (Messrs David Allen and Sons, Ltd., Wandsworth, S.W., overseer, letterpress machine department).

The president drew attention to the presence with them that evening of a well-known and hard-working member, who had been prevented by illness from attending the meetings for a year or more—Mr. G. H. T. Freeman. The meeting having given Mr. Freeman a hearty ovation, he briefly responded, expressing his thanks for kindness shown in his illness by members of the P. M. and O. A., and particularly by the president, Mr. Berry.

Annual Outing to be Revived.

The meeting next discussed a recommendation of the council, "That an outing be held on Saturday, September 19th at High Beach." The president recalled that he had thrown out the hint of this at the last meeting. The council, he said, had since discussed the idea, and strongly approved of it. The general secretary had been in touch with the hotel at High Becah, and there seemed every prospect of a most enjoyable day being arranged.

The president having proposed, and Mr. R. B. Simpson having seconded a motion that the recommendation be accepted, this was carried unanimously. It was also agreed that the lecture and entertainment committee be empowered to proceed with the necessary arrangements, and that Messrs. Campling, Dawson, Jarvis (J. W.), Simpson, Hutchins and Shepherd, who had helped at the recent United Gathering, be asked to assist the committee.

The Year's Working.

The meeting agreed to take as read the report which had previously been circulated to members. This put on record that the past year had been mainly a period of steady progress, alike in the Parent Association and in the various provincial centres. The membership showed an upward tendency, there being an increase of 17 on the year. Reference was made to the improving financial position of the Association, to its active interest in technical education and to the success of the social side of the Association's work in all parts of the country, and the report ended with an appeal to members to use their influence towards augmenting their numbers, mention being made of the special effort to this end made recently in London by the president.

The accounts indicated a very satisfactory state of affairs, the outstanding feature being an increase of £541 in capital account. In the year's expenditure was to be noticed the sum of £268 paid in unemployment benefit (to 33 members) and £65 to the London School of Printing.

The auditors, Messrs. W. H. Mann and R. B. Simpson testified (the former in writing and the latter in person) to the very satisfactory way in which the Association's books are kept, and thanked the general secretary and the financial secretary for the facilities given for the audit.

Mr. Dawson was the first speaker in the discussion, in which several members joined. He congratulated the president and council on the report, which, he said, was the most satisfactory that the Association had had for some considerable time. He emphasised the need for active support of the president's efforts to extend the membership of the Parent Association.

The accounts were considered in detail and a number of questions asked and answered.

In regard to death benefit Mr. Dawson congratulated the officials upon the promptitude with which payment is made to the representatives of deceased members. In this connection the general secretary mentioned that in the last five years the Association had paid out £4,265 in death benefit.

A feature of the discussion was once again the raising by Mr. Dawson of questions relating to the Association's monthly journal. The speakers on this subject included Messrs. J. C. Pugh, A. E. Jarvis, E. W. Whittle, E. H. Berryman and J. Acton. The general secretary drew attention to the increasing balance upon the credit side of the Association's accounts, and the meeting as a whole seemed to regard the present state of affairs as very satisfactory.

The president put forward on behalf of the council the suggestion that the Association should, in the coming winter, again arrange for a series of whist drives. After some discussion—in the course of which Mr. Jarvis put forward the alternative suggestion of bridge drives—it was formally proposed, seconded and carried that the whist drives be continued.

Members were reminded that there is no meeting of the Parent Association in August.

Printers' Claim Succeeds.

In the Bow County Court on Friday, before Judge Snagge, Messrs. H. Milner and Co., of Truro Works, Truro-road, Walthamstow, E., printers and box-makers, sued Mr. C. E. West, of 11, Norfolk road, Higham Hill, Walthamstow, E., to recover £22 14s, balance alleged to be due for printing work done. The case was a rather complicated one, and a remarkable feature was that the defendant had sworn an affidavit that he had never had any transactions with the plaintiff.

Judge Snagge, giving judgment for the plaintiff for the amount claimed, with costs, said it appeared to be an undefended action. As future proceedings were foreshadowed he would say nothing about that affidavit that had been sworn beyond advising the defendant to have the very best advice, before he saw another one. He did think that it was most important that litigants who put their signatures to documents, under oath, should say the truth, the whole truth, and nothing but the truth. The affidavit the defendant had sworn was wholly inconsistent with his attitude as shown by the evidence he had given.

Judgment was then entered for the plaintiff, with costs.

Printing, Bookbinding and Kindred

TRADES OVERSEERS' ASSOCIATION.

The June meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C., the chair being occupied by Mr. J. Fleming (president), supported by Mr. Aves (vice-president). In spite of the warmth of the evening there was quite a good attendance of the members. After some Association business had been dealt with, Mr. Chris Atkins, late bindery overseer at the Co-Operative Printing Society and afterwards bookbinding instructor at the London Printing School, gave an interesting chat on "Fleet-street."

After the passing of the minutes, the meeting proceeded to the election of the following gentlemen to membership:—Messrs. J. J. Catlin and W. Collins, warehouse overseers, both of the Amalgamated Press; T. Ashford, letterpress machine overseer, Messrs. Howard and Jones, Ltd.; W. G. Lowe (honorary member), works overseer, Messrs. Bailey Bros.; H. W. Smith (honorary member), overseer of the warehouse, Messrs. Loxley Bros.

The chairman extended to the newly-elected members a warm welcome on behalf of the Association.

The president and secretary then gave an account of the recent deputation from the Association to the Master Printers' Federation on the question of notice.

Both speakers bore testimony to the friendly manner in which the deputation was received, and the thoroughly outspoken yet harmonious way in which the proceedings were conducted.

From the information given to the meeting it was understood that the Federation desired a clearer definition of the positions held by the various members of the Association before coming to a final understanding on the question.

After other members of the deputation had spoken of the very agreeable way with which they had been received, the meeting endorsed the action of the secretary in presenting to the Master Printers' Federation full information and a list of the members.

Letters were then submitted from Messrs. R. Hazell, W. J. Evans, A. J. Daines, Jones (secretary of the Womens' Branch of the Paper Workers' Union), G. A. Eden and J. A. Esler (the Association's hon. technical representative).

Mr. Esler's letter referred to the Winterbottom Scholarship, and explained to the meeting the full nature and working of the scheme. Details of the scheme were given in our issue of June 25th.

The members next turned their attention to the appeal made on behalf of the annual outing of the Vellum Binders and Machine Rulers' Pension Society, and then granted their usual donation of three guineas.

Mr. F. C. Peacock, the popular secretary of that Society, returned thanks to the Association for its generous contribution.

Mr. Smith next reported on the latest arrangements made for the Association's coming-of-age celebration, in connection with which a carnival dance and dinner will be held on September 25th at the Holborn Restaurant.

Mr. Atkins then dealt in an interesting fashion with the early history associated with Fleet-street and spoke also of the early days of the Fleet River, Temple Bar, St. Bride's Church, Poppins'-court, Turnagain-lane, Shoe-lane and other places, and then dealt with the many celebrities connected with them.

On the proposition of the chairman the thanks of the meeting were tendered to Mr. Atkins for his address.

Curling Paper.

Having observed on more than one occasion lately references to papermakers' difficulties and to complaints which, it is alleged, "printers are making about unsatisfactory paper supplied by mills," a correspondent for-

wards four photographs of a ream of paper taken from a consignment of one ton recently delivered to a printer. We print herewith reproductions of two of the photographs. The writer adds:

"This paper was warehoused for three or four weeks in a cool, dry room, and you will

observe the condition in which it is. The photographs, of course, were taken out of doors, in order to obtain the necessary sunlight.

"What is the object of engineers trying to speed up printing machines, and put on the market new machines giving increased output, when a printer is expected to machine paper like that shown in the photographs?

"It is not a case of an isolated ream, as this ream was taken *ex* a consignment of one ton, and the result is, it either has to be all returned to the makers, or printed off at a very slow speed.

"The attitude taken up by papermakers is also very instructive, as on the above complaint being made, the reply received is as follows:—'We beg to inform you that the mill can throw no light on the complaint about the paper supplied to you *ex* Order 230 curling. They say they made the paper exactly the same in every respect as previous parcels; and if the paper curls, it certainly is not the fault of the mill.'

"The above attitude is, unfortunately, the one taken up by a number of the mills."

GREAT improvement is noted in the Dutch paper industry, and exports are much greater than in 1924.

New Composing Machines Bring New Business

¶ One of our customers tells us that the **extra** work he has been able to handle since he replaced his old, out-of-date machine with an Intertype has paid for the installation.

¶ It is a demonstrable fact that keeping a machine too long—failing to take advantage of new inventions successfully applied in the trade—is a definite source of loss.

¶ There are many British printers to whom we should like the opportunity of proving that an up-to-date Intertype—the Better Machine—will quickly pay for itself out of the **extra** work its installation makes possible. If you have an old composing machine, let us discuss this matter with you. Send a card to-day—there is no obligation.

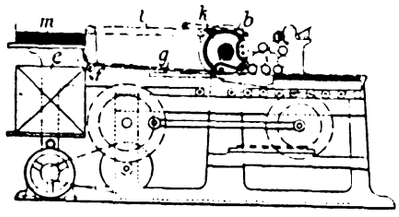
New Inventions

Guards for Platen Machines.



Mr. J. P. Udal has patented an invention whereby in printing, cutting-out and like machines of the platen type, a guard h formed by a spiral spring, a cord, or a padded bar is swept above the closing platen a by an arrangement of linkwork. The guard h is supported by a pair of levers f at either end of the frame carried on a rod

g supported in the ends of levers b, which with levers c are secured to a rod d pivotally carried by the platen. One lever c is connected to a fixed point by an adjustable link e, and an extension f' on one of the levers f is connected by a link i either to the platen a (as shown) or to a point on the link e. Any of the levers and links may be curved.

A Continuous Revolution Cylinder.

Under an invention by the Rockstroh-Werke Akt. Ges., a continuous revolution cylinder machine is constructed with an automatic sheet feeding mechanism of known kind comprising a pile e and separating and forwarding mechanism f which feeds the

sheets to a feed-table g tangential to the underside of the impression cylinder b. The printed sheets are taken from the top of the cylinder and are passed printed face upwards over a bridge k to a conveyer l and on to a pile m.

Making Printing Inks.

Under a patent by Messrs. J. W. Leadbeter and W. A. Towler charcoal made from peat or coconut or other shells is used for making printing and lithographic inks, mixed with some or all of the following materials, namely, pitch made from peat tar, glycerine, ordinary soap dried and reduced to powder, linseed-oil varnish, linseed oil, cotton-seed oil, and resin oil obtained by distillation of pine cones.

Type Printing Surfaces.

An invention by Mr. R. S. Devlaminck relates to a method whereby circulars, etc., are printed in imitation of type-written matter by means of a printing surface produced by a typewriter and inked in a special manner. The matter to be printed is impressed in a thin sheet of tin or other suitable metal in a typewriter provided with an elastic impression roller and plaster of paris, cement, resin or other suitable material is applied to the impressed side of the metal to fill the intaglio impressions and form a rigid backing for the metal sheet. The relief side of the sheet is inked by pressing upon it by means of a roller, a sheet of paper or fabric impregnated with ink.

Safety Papers.

According to an invention by Messrs. Todd Co., Inc., for which a patent application has been made, benzidine, tolidine, dianisidine, and their salts, characterised generally by a molecular arrangement known as di-phenyl linking, are added to paper pulp, or to the sizing used therewith, or paper may be impregnated with a solution thereof in the production of safety papers. 30 lbs. of dianisidine sulphate to a ton of pulp is mentioned, and such substances may be produced in the paper itself by impregnating first with the acetate and then passing the treated web through a solution of an acid or salt, such as sulphuric acid or sodium sulphate.

Rubberised Paper.

One of the objects of an invention by Mr. K. L. Moses is to provide an improved product manufactured from paper material, which product is remarkably tough, has high tear-resisting qualities, is very flexible, presents a high folding number, has a surface that will resist strong abrasion by a blunt instrument and is capable of being put to a great variety of uses by subjecting it to various kinds of surface treatment, while it will also retain its tough qualities even when saturated with water. The base material of the improved product is made on a paper-making machine, and it has somewhat the nature of paper, in that it is made from a liquid pulp of fibrous material, but it differs from ordinary paper in that the fibres are relatively long fibres and are loosely matted together to produce a highly porous web.

The pulp or stock may be formed of hemp fibre, jute fibre, ramie fibre or other similar material having long fibres, and this stock is prepared similarly to ordinary paper stock, except that the beating is not carried so far, and the stock is exceedingly free.

After this highly porous sheet material of loosely matted fibres is formed, it is then subjected to a rubberising process, by which the individual fibres are coated with rubber, without, however, necessarily having the interstices between the fibres entirely filled with rubber. This rubberising process may be carried out by immersing the product in a rubber, gutta-percha or balata solution, which solution may be a hydrocarbon solution or a solution in the nature of an emulsion or a suspensoid of the above-named gums.

After the web or sheet has been subjected to the rubber solution so as to provide a coating for the individual fibres, it is dried in some suitable way. When the rubber coating is a hydrocarbon solution, the drying is effected by evaporating the volatile solvent, and where the latex emulsion is employed, the drying is effected by evaporating the moisture in the emulsion. After the material is dried it may be subjected to a condensing process to render it more compact and to condense the somewhat loosely matted fibres.

TECHNICAL PAPERS.—The eight series (No 1) of papers and addresses presented before the Technical Association of the American Pulp and Paper Industry is published from New York under the title of "Technical Association Papers," price $3. The publication conforms to the size and character of previous issues. Running to about 210 pages of letterpress, the contents, thus preserved in a permanent form, cover a wide field and represent a valuable addition to the literature of paper technology. In addition to the proceedings of the annual meeting, there are several papers on a variety of important subjects, many of them being illustrated, thus adding to the usefulness of the work. A list of officers, a directory of members and a subject index complete the volume.

SOME interesting samples of pergament paper come from Mr. J. A. Holman, 20–21, Queenhithe, London, representing Vohl Pergament A.G., Gottingen. The white papers are clean and strong, and all have special characteristics which render them eminently suitable for wrapping purposes. A new line is the export pergament, 115-20 gr., a brown wrapping treated with glycerine. Toughness and pliability recommend it to large wholesale houses in this country, who have placed large orders for it, being attracted by its adaptability for making neat parcels.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE week has brought no fresh flood of trade, nor any expectations of any. If there is a steady stream of business, it is rather because its volume does not permit of its being placed in the category of rivers. So far as home demand is concerned, it is of the thin, attenuated variety. The more one hears from those in commercial and industrial circles other than our own, the more dismal does the outlook seem. Textile manufacturers cannot help feeling the influence of affairs in the Far East, which was their happy hunting ground for heavy contracts. Engineers and shipbuilders complain of lost tenders and home authorities are developing a fondness for indulging in that sort of economy which consists in placing orders abroad at prices apparently more favourable than our own. If the builders of machinery and ships cannot hold their ground against the Continent, with engineers' wages so little above the pre-war level in comparison with other industries, the investigator may well look elsewhere than at wages for the cause of high production cost.

* * *

SWEDISH bank papers have recently undergone a slight reduction in price for quantity which makes it difficult for English mills to keep pace. In one way the best Swedish bank is more to the taste of buyers than the standard English quality. It has a stiffer or crisper feel and rattle. This may be due to conditions of manufacture; but it is to be noted that not all Swedish mills impart this character and very few mills outside Sweden are able to approach it. The cheap English bank is a well-made paper, good to look at, clean in colour and strong to the tear, but it does lack the crisp crackle that users like. Often enough have we seen this feature turn the scale in favour of the foreign importer.

* * *

ESPARTO mills are finding less trade arising from home sources and some of the mills that were exceedingly busy a few months ago report a falling away. Fortunately there are special lines of manufacture at certain of the mills which serve to keep the machines fully employed. Export trade in esparto papers is quite good under the circumstances, a fair demand being entertained from the Far East. South America is also said to be showing a decided preference for esparto tinted imitation art papers.

* * *

REFERRING to South America, we have received from Messrs. Wiggins, Teape and Co., Ltd., a copy of a splendid little booklet prepared for issue to users and buyers of paper in the Argentine. Here is commendable enterprise and the turning of an opportunity to good account, for the distribution of the booklet will synchronise with the visit of the Prince of Wales. Got up in Spanish and English and with a cover embellished with an actual photo miniature of the Prince the contents are devised in telling fashion and the printing beautifully executed. It is in every way appropriate and fitting that a house like Wiggins Teape's should be setting a lead to the industry and trade in the right use of publicity. The same business sense that visualises the value of planned advertisement ensures a keen initiative over the possibilities that arise for expansion of export trade.

Papermakers' Directory.

The Papermakers' Directory of All Nations, 1925, has been brought up to date, an essential feature in a book of reference. This has been a task of no little difficulty in view of recent occurrences, especially in regard to some of the European countries. Accordingly it has been necessary to re cast the sections dealing with Czecho - Slovakia, Hungary and Lithuania. In regard to Hungarian mills, the names are given in two-language form, which is an undoubted convenience. All that was possible to get a complete list of the working plants in Russia has been done, and the book contains entries of some 80 paper, pulp and board establishments which were actually working last year.

With regard to the general scheme of the Directory, this, the 34th edition, follows the useful lines previously set down. The first section deals with the paper mills in Great Britain and Ireland, with particulars of location, production, number and width of machines, tonnage output, power used, etc. In addition to the alphabetical arrangement, the mills are also given in numerical and geographical order, which helps to facilitate in tracing a reference. Equally valuable is the index to allied trades, such as wholesale stationers and paper merchants, waste paper, rag and paper stock dealers, cardboard box manufacturers, china clay producers and merchants, paper bag makers, paper agents and mill representatives, export merchant shippers of paper, etc. The list of agents appears to be very complete, the line of business in each case being conveniently indicated by reference marks, while the mills represented are clearly shown.

A large part of the volume is devoted to the paper, pulp and board mills of foreign countries and the British Colonies, which are arranged alphabetically both as to countries and names, similar details being given as in the case of Great Britain. The comprehensive list of mill productions is another welcome feature. There are over 400 trade headings, arranged as to the class of goods manufactured, the country of origin and the names of producing firms being incorporated.

There are other sections of Dean's Directory which help to complete its usefulness, such as those which contain an index to commercial prospectuses, Paper Trade Customs, particulars of British and foreign paper trade associations, sizes of British papers and tables of equivalent weights and sizes. Altogether an indispensable book for all who are concerned with paper. It is published by Dean and Son, Ltd., 29, King-street, Covent garden, London, at 21s. net.

THOMAS AND GREEN, LTD., Soho Mills, Wooburn Green, Bucks, have long been noted for their tinted papers. Their 424 Beacon M F. tinteds, of which a pattern book is just to hand, are excellent examples. They are stocked in twelve colours in various sizes and weights. The paper itself is a clean, close sheet, and the tints, which are evenly applied, are well adapted for effective work.

THE *British and Colonial Printer and Stationer* circulates all over the world.

Wolvercote Mill and Union Labour.

Notices Withdrawn.

We are glad to learn that the labour unsettlement at Wolvercote Mill, near Oxford, of the Oxford University Press, is likely to pass over without any serious trouble.

The union section raised an objection to the employment of non unionists, and to advance their claims tendered notices which were accepted by the management.

The mill authorities took the stand that the matter was one for solution among the men themselves, especially as wages or hours of labour were in no way involved.

Evidently members of the trade unions see the justice of this contention, and have deferred any action, but meanwhile by peaceful persuasion will use every effort to get non-union labour to join one of the unions.

THE Australian overseas trade figures for the eleven months ended May 31st, 1925, show imports of paper and stationery £6,000,000.

Standardisation of Paper and Boards.

Mr. W. Howard Hazell, J.P., the Leading Advocate of the Standardisation Proposals, Discusses the New Agreement.

The final ratification last week of the agreement between the Federation of Master Printers and the National Association of Wholesale Stationers and Paper Merchants marks a big step in the direction of increased efficiency in the printing and allied trades. It is a forward move that leads towards important savings of time and money, and is one upon which the whole industry has cause to congratulate itself. Knowing that Mr. W. Howard Hazell, J.P. (who is now president of the Federation of Master Printers), has, since about 1917, been pressing this reform upon the trade, and that it is largely to his initiative, energy and ability that the success of the scheme is due, a representative of the *British and Colonial Printer and Stationer* took the first opportunity of calling upon Mr. Hazell to congratulate him upon the adoption of the standardisation scheme and to evoke a few comments and items of further information that might be of general interest.

Scheme Capable of Extension.

Though highly gratified at the outcome of the long-drawn-out standardisation negotiations, Mr. Hazell hastened to impress upon our representative that he regards the agreement signed as only a first step in the direction of applying sane and efficient methods to selling and dealing in paper and boards. The scheme as it stands can be extended by the adding of clauses relating to such other items of standardisation as may be agreed upon later, and it therefore opens the door to a more comprehensive application of the principles making for economy and efficiency.

The first such additional clause, Mr. Hazell remarked, will probably be one that is already under discussion, viz., an arbitration clause, to cover disputes that may arise between members of the Association of Wholesale Stationers and members of the Federation of Master Printers. Probably the great majority of printers would prefer to settle the occasional disputes which arise about the purchase of paper by arbitration instead of by recourse to the law. A panel of experts selected by the two associations will probably be arranged, and when the method of arbitration has been agreed a new clause will be added to the standard conditions.

Advantages of Standard Conditions.

Proceeding to discuss the scheme, Mr. Hazell pointed out that the main purpose of the agreement is to bring in uniformity where previously there has been confusion. The outstanding advantage is the adoption of the thousand instead of the ream as the basis for calculating amounts and cost of paper required for printing. Innumerable errors have arisen in the past because of the fact that printers, in drawing up their estimates, have had to base their calculations of paper and length of run upon reams, the number of sheets in which has been a variable quantity, whilst in quoting to the customer they have had to deal in thousands. There was thus a liability to base the estimate upon the ream instead of on thousands, with consequent serious error of price. To calculate in thousands in both cases will be a big step towards economy of effort and accuracy of estimating.

Again, the use of the thousand basis will greatly simplify calculation of the cost of small quantities of paper, for the working out of reams, quires and sheets will be replaced by dealing with thousands and parts of thousands —and the division of the price of a thousand sheets into that of 100's or 10's is merely a matter of moving the decimal point. A probable outcome of the adoption of the thousand basis will be the abandoning of the quire of 24 sheets and the adoption in its place of some decimal part of the thousand—say 20, 25 or 100 sheets.

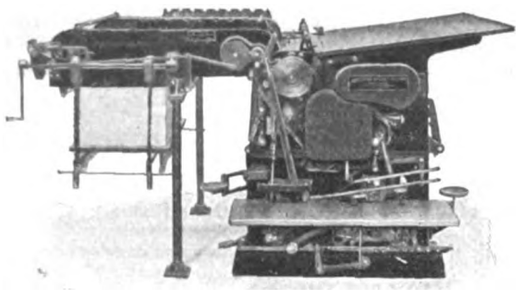
Then in regard to sizes, a great deal of confusion will be abolished. Names of sizes that have been of variable significance disappear. Every maker will stock standard sizes known by standard names, each of which names will refer to one size only; and such extra sizes as are needed to meet special requirements will be designated in inches, and not described by names.

It will be a great advantage, too, that packages of paper will be plainly marked with the nature, size and quantity of the paper contained. Stock-taking, keeping stocks and ordering will thus be greatly simplified.

Ready Reckoner.

During the period of transition it will, of course, be found that printers will have to handle paper packed partly in thousands, and partly in the old packings of 480's and 516's. To simplify the matter of converting the price of reams into the price of thousands, or parts of a thousand, a comprehensive ready reckoner has been prepared in the form of a printed sheet, which shows at a glance the equivalent prices of these quantities of paper calculated out for reams costing from 3s. to 80s. In respect of boards, buyers will be greatly assisted by the thickness of boards being described in one-thousandths of an inch, or their weight in lbs. per 100 boards. The old and very unsatisfactory method of designating boards as three-sheet, four-sheet, etc., is thus abandoned.

Even, now, of course, we are not left without anomalies, and one is that it is the custom for envelopes to be sold by the thousand and the notepaper used with them to be sold by the ream of 480 sheets. It will be an obvious step in the right direction when notepaper also is sold by the thousand sheets.



It was not found possible to fix a definite date on which the new standard conditions should come into force, as it will of course take some time for the wholesale stationers to get rid of their present stocks and replace them by paper packed to the standard conditions. During this time master printers must exercise patience and be reasonable with their suppliers, endeavouring to help them in any difficulties that may arise. The gradual adoption of the new system is, however assured, as over 1,000 printers, representing the bulk of the purchasing power in the trade have signed a statement that they are in favour of standardisation and wish to place their orders on standard conditions.

L&M

OFFSET LITHO ROTARY

WITH PILE DELIVERY.

FEED SIDE OF THE L&M OFFSET LITHO ROTARY WITH PILE DELIVERY.

This is a two-revolution press—a very desirable feature in a machine for colour printing in dead register. The printed sheets are delivered face up on the pile clear of the machine at a convenient height for examination. The plate cylinder is of large diameter, which facilitates perfect inking, damping, and manipulation of the plate. The damping mechanism is placed below the plate cylinder, so that splashing of water does not affect any other part of the machine. The ink distribution is highly efficient. A combination mechanism automatically trips the impression cylinder, inking rollers, ink-ductor, and water-ductor rollers. The machine attendant can fully control the press without leaving his seat.

It is built with Pile Delivery, but can be supplied with an ordinary delivery board if desired.

This Offset Press is built in three sizes:—

Machine No.	Size of Sheet. in. in.	Size of Design. in. in.
No 1	37½ x 52	37 x 52
No. 2	33½ x 45½	33 x 45½
No. 4	25 x 37	24½ x 37

Factories and Workshops.

Chief Inspector's Report.

The annual report of the Chief Inspector of Factories and Workshops for 1924 states that, taking industry as a whole, trade conditions have been bad, though there have been particular industries and branches of industry which have been very prosperous. It has been suggested in some quarters that older workers, more especially in the case of women, were being replaced by young labour, but the inspectors have not, in fact, obtained any evidence of this. Discussing trade developments, the report says that the new industrial areas continue to grow, and the removal of factories from the centre to the outskirts of London is steadily increasing. Perhaps the most noteworthy development is the continued and rapid increase in the generation and use of electricity. Large new stations are being erected, while current is being distributed at voltages hardly thought of a few years ago. Important developments, too, have been taking place in the chemical industry.

Endurite.

An entirely new process, the manufacture of endurite, has been started in connection with a paper mill in the Edinburgh district, and this promises to develop greatly. This is to use up all the waste products from the esparto grass, the coarse fibre of which is unsuitable for papermaking. At present many of the mills pay large sums annually for the removal of this waste, which will now be collected, ground, and pressed in steam and hydraulic presses. The resulting material can be stained to any colour, and may be used in the manufacture of combs, buttons, tooth brushes, etc., just like the casein products. Its principal use, however, will be in electrical work, as it possesses extremely high power of electrical resistance.

Rubber Latex.

Again, the discovery that the addition of ammonia to the rubber latex as collected on the plantations prevents coagulation, and renders the fluid suitable for export in bulk, is leading to interesting developments in the rubber trade, this material being now used for the production of a very fine sheet rubber suitable for many classes of rubber goods.

Pipe Conveyors in Paper Mills.

At several paper mills in Scotland a system of pipe conveyors is now in operation through which the pulp is pumped from the boilers to the beater house, a system which has effected a marked improvement in the general conditions in the beater house.

More Factories.

The number of registered factories in Great Britain has again increased. The total in March stood at 142,494, as against 139,920 for 1923. The number of workshops continues to decline, and is now 133,729, as opposed to 140,850 last year. Factories thus for the first time exceed workshops in number. The decline in workshops is largely due to the introduction of electrical power, the use of which converts premises from a workshop into a factory. There is, too, the tendency for the small places to be absorbed by the big.

Reported Accidents.

In the papermaking industry the total number of accidents reported in 1924 was 1,914, 1,706 being males (with nine fatal accidents) and 208 females. Under the heading of letterpress, litho printing and photography 2,445 accidents were reported, 1,562 males (seven fatal) and 883 females (two fatal).

While the staff report few fresh developments in "Safety First" organisation, some slight progress has been made, and where an effective organisation is actually at work the results reported are remarkable.

The report contains a review of the system of employment of women and young persons on the basis of two shifts, and states that the years 1921–24 have not provided a favourable field for experiment, the depressed state of trade making it difficult to judge whether the demand for the two-shift system is likely to be extensive, or whether, if its operation is continued, advantage will be taken of it under normal conditions.

Leipzig Fair.

The Leipzig International Sample Fair owes its existence to the initiative displayed by the merchants generally, and which on two occasions every year brings to an actual realisation the exchange of commodities between Europe and the rest of the world. The Leipzig International Sample Fairs which take place twice yearly, beginning of March and the end of August, show the interchange of commodities in a very practical manner, over 14,000 manufacturers and exhibitors taking part. These goods are housed in 100 large Halls situated in and about Leipzig, and almost 200,000 visitors were present at the last Exhibition held in March, 1925. Almost every nationality in the world was represented amongst the visitors, and over 1,200 of the leading merchants in this country were present. The Leipzig Sample Fair having been in existence since the year 1268 has made a name for itself all over the world and is recognised as being the leading International Exhibition on the Continent.

MESSRS. SAMUEL JONES AND CO., LTD., are sending out some attractive lines of non-curling gummed paper suitable for various classes of printing. Four qualities have been specially made for lithographic treatment; there is a similar set for the best class of letterpress printing; and a further series for cheap letterpress label work. Paper and gumming are both well suited for their particular purpose.

THE address of the High Commissioner for Canada is now the Canadian Building, Trafalgar-square, London, S.W.1.

Leeds as a Printing Centre.

In a special article indicating the important place held by printing in the city of Leeds, the *Leeds Mercury* states that in this Yorkshire city—

Over 8,000 men earn their living in the city in various branches of the trade.

Over ninety firms, in addition to some thirty "one man" businesses, are producing printed matter day by day.

Paper used runs into thousands of miles a year. One firm alone spends £40,000 a year on materials.

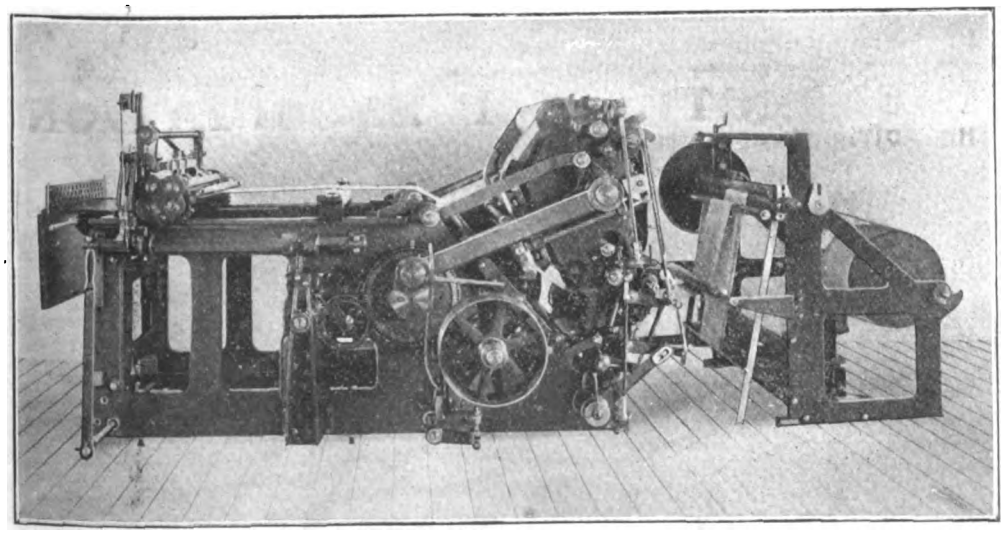
Between 600 and 700 men are employed in the largest concern in the city. Four or five others each have over 500 in their works.

The Printing School.

Very high praise is given in the article to the Leeds School of Printing, which is described as "incomparably the finest in the country."

"The highest achievements of the present," it is stated, "mingle with the scarcely born ideas of the future to make a visit a fascinating experience. The school has its secrets, and some of them seem at first glance far out of the realm of printing. But the master printer to-day has to be chemist, physicist, engineer, photographer, mathematician, and business man in one. So it comes about that the most important war work in replacing the German dye industry by British manufactures was done at the school. It was in connection with research to prepare dyes for sensitising photographic plates."

The school has had an enormous influence on the development of the later processes of colour printing. . . . With its up-to-date equipment for producing line, half-tone and colour illustrations; for casting type and setting it; for producing anything from a delicate colour print down to a single printed sheet; for making blocks and binding books; the school is a training centre for everybody, from a director to a printer's devil.



"The demand for students exceeds the supply. They go everywhere, from the composing rooms on big liners to the label-producing departments of over-seas fruit canning factories.

"A student at the school, which is affiliated to the University for the purpose, can take the degree of Bachelor of Commerce, with printing as a special subject. There is a post-graduate course for a diploma."

THE COMMERCIAL OUTLOOK.—The Association of British Chambers of Commerce announce that in view of the serious industrial and commercial outlook, Mr. Stanley Machin, the president of the Association, is making inquiries through the members of his Council and through the presidents of Chambers of Commerce, inviting them to furnish him with suggestions as to what steps can best be taken to remedy the present difficult situation.

Trade Notes.

PARTNERSHIP has been dissolved between A. H. Routledge and E. S. Weller, stationers and fancy goods dealers, 117, Regent-street, Leamington, under the style of Routledge and Weller.

THE London printing firm of Harrison and Sons, Ltd., is amongst those who have already applied for commercial "Monomarks"—in connection with the new identification system described in our issue of last week.

M.P. FEDERATION COUNCIL.—At a meeting last week of the Council of the Federation of Master Printers, a report recommending for consideration of its members three systems of profit-sharing was adopted; a benevolent fund for master printers was inaugurated; and consideration was given to a pensions scheme for printing office staffs. An interesting feature of the meeting was the presenting of articles of furniture to the late president of the Federation, Mr. W. B. Wykes, and to Lieut.-Col. H. Rivers Fletcher, past-president, in recognition of services rendered.

J.I.C. FLAG DAY.—Contributions are still being received as a result of the recent Flag Day on behalf of the Printers' War Orphans Fund, and reminders are being sent to those who have not yet returned their collecting sheets. Upwards of £3,000 has been received, and when the Scottish collection is made at the end of the year it is anticipated that last year's total is likely to be reached—though it was hoped that that figure would be considerably exceeded.

A MEETING to inaugurate a District Committee of the Joint Industrial Council is to be held at Letchworth next Tuesday, the 28th inst., when the speakers will include Messrs. A. E. Goodwin, A. E. Holmes and P. D. Michael.

NORTH-EASTERN Alliance of Master Printers is holding its summer meeting to-day (Thursday) at Redcar. Opportunities will be given for discussing new activities of the Federation, such as paper standardisation, profit-sharing, pension schemes and collective advertising.

PENNY POSTAGE.—In his statement to the House of Commons on Monday the Postmaster-General said he regretted that he could not say much about the penny post beyond that the Government continued to hope that as and when they could afford it they would be glad to revert to the system of penny post. It remained one objective of their policy, and they hoped to achieve it in the lifetime of the present Parliament. Several members urged the early restoration of the penny post, as to which Viscount Wolmer (Assistant-Postmaster-General) said there was no need to preach to the converted; the appeal should be addressed to the Treasury.

FORGERY CASE SENTENCE.—William Henry Harrison, age 40, pleaded guilty at the Old Bailey on Thursday to being found in possession of instruments for forging Post Office money orders and advice forms, and was sentenced to four years' penal servitude. He also pleaded guilty to being concerned in long firm frauds, and was sentenced to three years' penal servitude, the sentences to run concurrently. The Common Serjeant, in passing sentence, said Harrison was striking at the root of the financial safety of the country. The forging of money orders was the most dangerous thing in the world.

'PHONED PHOTOS.—An exhibition of photographs that have been transmitted over telephone lines from distances ranging up to 3,305 miles, the distance between New York City and San Francisco, is being held at the Royal Society, Burlington House, London, on Wednesday and Thursday of this week. The specimens include a reproduction of a three-colour photograph sent by 'phone.

COLLECTIVE ADVERTISING.—The third issue of advertising literature has now been posted to all traders and manufacturers whose names were sent in by members of the Federation of Master Prin ers subscribing to the Federation Collective Advertising Scheme. It is a folder which illustrates and explains the nature and use of mailing cards, broadsides, posters, cut-outs, showcards, blotters and stationery, and it strikes us as a very attractive bit of publicity matter. We understand that this folder has already brought in a number of inquiries to the Federation, who are anxious to extend their mailing list of potential buyers of print.

COSTING FOR TIN PRINTERS.—Mr. A. Williamson, the costing secretary of the Federation of Master Printers, has been instructed by the Tin Printers' Federation to prepare a scheme of cost-finding adapted to the special needs of members of this organisation.

THE provincial wholesale branch managers of Messrs. W. H. Smith and Son have undertaken to subscribe £60 a year in support of a bed in King's College Hospital.

IT is officially notified that all correspondence and orders for H.M. Stationery Office, Sale Office, should in future be addressed to the Director of Publications at the new address, Adastral House, Kingsway, W.C.2

GUTENBERG BIBLE.—One of the earliest printed books still in existence was brought to London on Monday by Mr. Edward Goldston, a Museum-street book dealer. It is a Gutenberg Bible, in two volumes, of which there are 13 known sets in the world, and was printed between 1450 and 1455. This set was discovered by Mr. Goldston in the Melk Monastery, Vienna, where it has been for 300 years. He is said to have paid well over £10,000 for it.

PRINTERS' SPORTS AT BIRMINGHAM.—The annual athletic meeting of the *Birmingham Post* and *Birmingham Mail* was held at the office grounds at Yardley on Saturday. The president, Sir Charles Hyde, proprietor of the papers, attended, and presented the prizes.

THE annual cricket match between the Jockeys and the Press will this year take place on the ground of the Sussex County Cricket Club, at Hove, on Monday, July 27th.

THE combined staffs engaged in the production of the *Western Morning News*, Plymouth, including the editorial, commercial, publishing, case-room, machine, stereotyping and process, had their annual wayzgoose on Saturday. The party, numbering over 50, took train to Totnes, where a steamer, flying the *Western Morning News* flag, was ready to convey them down the river to Dartmouth, where lunch was taken. The journey was then continued to Paignton, where dinner was served during the early evening. A return by train to Plymouth ended an enjoyable day.

DICKINSON'S FIRE BRIGADE.—The House of Dickinson Fire Brigade (Apsley and Croxley) took part in the South Midland District Competitions of the National Fire Brigades Association held at Edgware on Saturday, July 11th. They were successful in winning the following trophies:—1st prize, Hose Cart Drill; 1st, Hook Ladder; 1st, Escape; 1st, Steamer Turn-out; 1st, Steamer, Wet; 2nd, Steamer Wet Drill; 2nd, Steamer Dry Drill: 2nd, Hose Cart; 3rd, Four Men Dry Drill; 3rd, One Man Drill; Hertfordshire Shield (open to all Brigades in Hertfordshire); and Grand Aggregate Shield.

MR. PIERCE WILLIAM RICHARDS, whose death, at the age of 43 years, has taken place at Cardiff, was the proprietor of the Cardiff Riverside Printing Works.

MR. H. C. ANNING, London director of the *Bristol Times and Mirror* and its associated newspapers, passed away on Tuesday morning at his home.

MR. H. GILL, who has died at Leeds at the age of 61 years, was formerly a compositor on the *Leeds Times* and had latterly been on the case-room staff of the *Yorkshire Evening News*.

MR. FREDERICK HENRY AMPHLETT, who died at Virwood, Dorset, on Friday, aged 59, for nearly 30 years chief sub-editor of *Reynolds's Newspaper*, retired from active journalism before the war.

MR. WILLIAM ALLISON, the racing journalist, died on Wednesday of last week, at his residence in South Kensington, at the age of 74.

MR. BERTRAM WALDROM MATZ, editor of the *Dickensian*, died on Friday, aged 60. He was a partner in the publishing business of Cecil Palm r.

THERE was a large attendance at St. Andrew's Church, and the old cemetery, Plymouth, on Thursday of last week on the occasion of the funeral of Mr. Ernest George Emmerson, partner with Mr. Percy Smerdon in the well-known firm of Messrs. Sellicks, booksellers, stationers and printers, Bedford-street, Plymouth.

THE Irish Master Printers' Association executive committee have passed a vote of condolence with the family of the late Mr. John Shannon, of the *Coleraine Chronicle*, an early member of the Association. A similar vote has been passed by the Associated Irish Newspapers.

THE late Mr. William Alfred Fletcher, Ulverston, printer and stationer, of the firm of Messrs. Fletcher and Robinson, left £10,077 (net personalty £8,797).

THE late Mr. John Ker Henderson, of Bonnington Paper Mills, Leith, retired papermaker, left £8,567.

AT the annual meeting of the South Wales branch of the National Union of Journalists, at Cardiff, Mr. A. W. Barratt (Newport) presided. Mr. Arthur Stephens was elected president for the forthcoming year. Mr. W. E. Pegg (treasurer) and Mr. Dan Lewis (secretary) were unanimously re-elected. A successful year was reported, the membership of the branch constituting a record.

TENDER FOR PRINTING PAPER AND BOARDS FOR SOUTH AFRICA.—His Majesty's Trade Commissioner in South Africa (Mr. W. G. Wickham) reports that the Union Tender Board invites tenders for the supply of printing paper and boards to the Government Printer at Pretoria. Tenders must be received in Pretoria by Wednesday, August 12th. Further particulars may be obtained by firms interested in the supply of goods manufactured in the United Kingdom, upon application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

PAPER AND BOARDS FOR EGYPT.—The Commercial Secretary at Cairo (Mr. E. H. Mulock) reports that the Egyptian Government Press are inviting tenders for the supply of smooth surface writing paper, calender printings for common forms, buff tinted paper, news-print, millboard, thickness 1.1 mm. and 2.2 mm., strawboard 1.1 mm. and 2.2 m.m. A copy of the specification, conditions of tender, together with samples of some of the papers required may be inspected by interested United Kingdom firms at Room 41, Department of Overseas Trade, 35, Old Queen-street, London.

MESSRS. SAMUEL JONES AND CO., LTD., have sent out printed specimens of Devonvale coated paper. The colour and black and white effects are very striking.

Empire Essay Competition.

The results of the British Empire Essay Competition organised by the Society of Women Journalists are as follows:—

Adult Section.—First prize, £50: Sir Alfred Davies, Reform Club, Pall Mall; second prize, £25: Major Herbert Noyes, Morland, Marazion, Cornwall.

Girls' Section.—Prize, £10: Miss Esther Hamilton, 7, Worcester-crescent, Clifton, Bristol (Clifton High School). (Age 15 years, 10 months.)

Boys' Section.—Prize, £10: James Munro Bertram, St. Paul's Manse, Reed-street, Oamaru, New Zealand (Whitaker Boys' High School, Oamaru). (Age 14 years, 8 months.)

The final adjudicators were the Duchess of Atholl, Lord Riddell, and Mr. John Walter. The prize money was presented by Lord and Lady Burnham (president, Society of Women Journalists).

Printers' Readers Provincial Guild.

East Anglia's Annual Meeting.

The East Anglia District of the Provincial Guild of Printers' Readers held their second annual meeting at Messrs. Pratt's Restaurant, Great Yarmouth, on Saturday.

In the district chairman's absence (Mr. A. W. Daynes) the chair was taken by Mr. H. Edwards (Beccles), who opened the proceedings with a brief speech. The annual report and correspondence were presented by the district secretary (Mr. W. E. Cooper), who expressed the district's thanks to Messrs. H. Edwards and K. J. Hancy (Bungay) for compiling papers of interest to readers The treasurer (Mr. A. A. Oliver, Norwich) gave financial details and reported a satisfactory balance in hand. It was decided to make an extra grant of 30s. to national funds.

Mr. R. B. Devereux (Beccles) outlined the steps taken by reader-delegates at the Lowestoft T. A. conference in June, and expressed the opinion that a more promising future was in store for printers' readers, as was emphasised by the reception of the Guild motion. At the triennial delegate meeting of the Typograpical Association it was agreed that the reader's minimum rate of pay should be the linotype rate of the branch (or grade) where employed. This would affect only those readers who were not already in receipt of the more favourable rates, as most of the large printing houses were already paying experienced readers a higher raie.

Four new members were enrolled, and an application considered from a Bungay reader.

In view of the distance from district headquarters of the Colchester area it was thought advisable to approach the national secretary (Mr. W. E. Fursland, Tonbridge) with a view to initiating an East Anglia District South. National notice papers were distributed, and these contained reference to the formation of a new district—South-Western—with Mr. J. Bassett, 11, Park-road, Compton, Plymouth, as secretary, and a second article, "Some Reminiscences of My Life," by Mr. C. Doggerell (Tonbridge).

The election of officers for ensuing year resulted as follows:—District chairman, Mr. A. W. Daynes (Norwich); district secretary, Mr. W. E. Cooper (Alexandra-road, Norwich); district treasurer, Mr. A. A. Oliver; committee, Messrs. E. C. Woodhouse, S. Fiske (Bungay), J. Hughes and H. Edwards (Beccles); auditors, S. A. Holland and E. C. Woodhouse.

After business members sat down to an excellent tea, and votes of thanks to the chairman and acting officials brought the proceedings to a close. On the invitation of the Caxton Press (Beccles) readers' "chapel" it was agreed to hold the next quarterly meeting there in October.

Joint Industrial Council.

At the quarterly meeting of the Joint Industrial Council of the Printing and Allied Trades, held on Wednesday of last week, General W. Wright Bemrose, of Derby, and Mr. W. C. Warren were elected chairman and vice chairman respectively for the ensuing year. The thanks of the Council were expressed by Mr. W. Howard Hazell to Mr. George Isaacs, the retiring chairman, who has served the Council well in his year of office.

A resolution was passed calling the attention of the Government to the urgent necessity of amending the Merchandise Marks Act in order that the public might more easily recognise British goods.

Reports were, as usual, received from the various committees. The Health Committee's report, presented by Mr. E. H. Lee, recorded progress in experiments with regard to the lighting of printing offices. The Apprenticeship Committee, through Mr. J. D. French, reported on the question of increasing the supply of women workers, a matter which it was decided to refer to the unions. The Conciliation Committee's report, presented by the joint secretaries, told of very useful work accomplished in the direction of the pacific settlement of disputes.

THE New York *Nation* celebrates its sixtieth birthday by issuing an attractive special number.

Mr. E. H. Sharman Honoured.

Presentations from Trade Friends.

An interesting and enjoyable function took place at Oddenino's Imperial Restaurant on July 13th. This was the date of the 50th anniversary of the birthday of Mr. E. H. Sharman, and his many friends in the paper trade took the opportunity of entertaining him at luncheon. "Bert," as he is familiarly addressed, was the recipient of many hearty congratulations, and there was pleasing evidence of the respect and esteem in which he is held, even by competitors. Mr. Sharman is the head of the firm Messrs. E. H. Sharman and Co., paper agents and merchants, 20-21, Queenhithe,

MR. E. H. SHARMAN.

Upper Thames-street, London, E.C.4. Among those present were:—Messrs. F. E. Griffiths (E. H. Sharman and Co.), A. H. Johnson (A. H. Johnson and Co.), G. E. Oswick (Reed and Smith), C. Pretzlik (Chas. Pretzlik), W. Gissler (Gissler and Pass), J. Mutimer (Davies and Royle), J. T. Steele (Spicers, Ltd.), A. Wardill (Wardill and Gilbert), E. E. Moore (Moore and Dewdney), L. Joseph, G. Lambert, B. Weatherill, H. H. Klass, S. J. Gillis, etc., etc. Mr. Gissler, it may be mentioned, made a special journey by aeroplane from Cologne on Sunday in order to be present. Communications expressing regret at not being able to be present were read from Mr. J. Muller (Schleipen and Erkens), referred to as Mr: Sharman's oldest continental friend, Mr. Wallington, H. J. Bradly and Mr. R. Baker.

"The King" having been duly honoured, Mr. F. E. Griffiths called upon all present to drink to the "Health and continued prosperity of their guest." He had known Mr. Sharman and had worked with him for over thirty years, and had found in him a partner who had never let him down. He had the qualities of a gentleman and a thorough sport, whether they were discussing business or not, and he hoped that he would long be spared to carry on his good work.

Mr. A. H. Johnson, in an interesting speech, referred to the great esteem in which Mr. Sharman was held by those present and the trade generally. It was the wish of all that he may enjoy long life, happiness and prosperity. The pleasant duty had devolved upon him to ask Mr. Sharman's acceptance of an oxidised silver timepiece, bearing the following inscription: "Bert, 13th July, 1875 -13th July, 1925, as an appreciation of good friends to a real friend."

Mr. Sharman, in acknowledging the gift, thanked all present for their kindness, and said that the clock would for ever stand on his office mantel piece as a reminder of their good wishes and esteem.

Mr. Walter Gissler also presented to Mr. Sharman a solid silver cigarette box as a token of esteem and of their long, co-operative and friendly business relationships. Mr. Gissler hoped that he would be offered a cigarette from this box upon every occasion that he came to England.

Speeches were also made by Messrs. J. Mutimer, A. Dewsnap, E. E. Moore and others. Mr. Pretzlik, on behalf of Mr. J. Muller, presented Mr. Sharman with a handsome cigarette holder.

Mr. Sharman returned thanks in suitable terms.

Curling of Paper.

SIR,—We were very interested to read in your last week's issue the piece on "Curling Paper." We can confirm the writer's remarks, for just lately we had consignments of paper which has been hopelessly spongy, wavy and cockly, and these have not been from the same mill, but from entirely different makers. The paper was required for litho work, and it has been impossible to use a great amount.

One mill to which we complained replied that their cutters often had to be adjusted and "we have even to go to the extent of putting temporary wrappers round one end of the roll if necessary to make the roll bigger in circumference." They, moreover, went so far as to suggest that there was really nothing wrong with the paper, but that we did not know how to print it. When mills make such absurd remarks, what can one do in the matter?

WIDDOWSON AND CO.

Leicester, July 20th.

SIR,—The question of curling of bond or bank paper is a matter of great importance to mills in England making these grades, and who are troubled with the defect mentioned.

As a practical papermaker of over thirty years' practical experience in both American and English mills, I have made thousands of tons of this particular paper in a notable American mill with five machines running at 400 per minute. At this particular mill there is no trouble with curled papers.

To make these papers like the Americans it is essential to use a certain bleached sulphite and also adopt a certain system of beating, and then mills will get the results they are after. I would guarantee to go into any British modern mill and use a Marshall refiner like the Yanks use, and make certain slight alterations to the beaters, and do away with 80 per cent. of the trouble met with. The rest would be done on the machine. I enclose some samples run at the speed above mentioned.

AN UNEMPLOYED FOREMAN PAPERMAKER.

Trade Union Matters.

T.A. COMPENSATION CASE.—At a recent meeting of the Executive Council of the Typographical Association a report was received from the secretary of the Brighton branch on the case of a member who had lost two fingers through an accident while working a platen machine. The Branch Committee were given the necessary permission to engage a solicitor to press the claim for compensation.

EX-SERVICE TRAINEE'S PROBATION.—The secretary of the Ashton branch of the Typographical Association has asked the headquarters of the Association for a ruling as to the period of probation which should be served by an ex-service trainee under the Government scheme. The age of the trainee was 39, and he joined the T.A. in February last at the commencement of his last year of apprenticeship. The Executive Council decided that he should serve a probation in accordance with his age, viz., three years.

MR. W. COLBY, of the Executive Council of the Typographical Association, has reported very favourably on an interview he has had with Mr. F. C. Macarkie, chairman of directors of the Doncaster and Boston Press, Ltd., with regard to enrolling men at the *Boston Guardian* office.

OUT OF WORK POINT.—It has been reported to the Executive Council of the Typographical Association that, owing to shortage of work, the members at an office in Blackburn had been placed on short time, and the father of the chapel had asked if it would be in order for each member to take a full week off and sign for unemployment benfit. They have been informed that in such circumstances they would not be eligible to draw out-of-work allowance.

T.A. GRADING.—The first meeting of the joint committee of the Typographical Association and the Federation of Master Printers to consider the question of re-grading will be held on Wednesday next, the 29th inst.

Printers' Managers and Overseers' ASSOCIATION.

Seeley Cup Competition.

Yorkshire journeyed to Sheepridge, Huddersfield, on Saturday last to meet Manchester on the green of the Belle Vue Hotel, in the first round of the Seeley Cup Competition. Yorkshire could only place twelve men on the field, therefore four of the best players (Messrs. E. Garrett, Geo. H. Rider, R. W. Hughes and E. C. Balls) on the side of Manchester were unable to find opponents In the end Yorkshire won by 29 points.

At half-time fifty ladies and gentlemen sat down to a substantial tea provided by host Cowlishaw, and at the close President Hamer (Yorkshire) and President Scouler (Manchester) delivered themselves of a few appropriate words of cheer. Regret was expressed that Mr. H. Crowther, owing to bereavement, was unable to be present, whilst feeling reference was made in connection with the late Fred Robinson (Manchester).

The scores were :—

Wheelhouse, J D....	21	v.	Nuttall, J. H.	...	11
Hamer, A. L.	... 16	v.	Hellewell, A.	...	21
Hirst, F. ...	... 21	v.	Scouler, F. ...	...	8

Short Time in Binderies.

A CONFERENCE was arranged to take place on Wednesday of this week between the Federation of Master Printers and the bookbinding section of the Paperworkers' Union on the question of the working of short time in binderies. The Union's opposition to short time working raises a problem that is of great importance alike to workpeople and to their employers. Doubtless both parties would welcome some definite solution that should make equitable provision for periods of temporary slackness of business. What the employer would like to find is some means of retaining the services of temporarily unneeded employees without increasing costs of production; whilst the employee looks for security of employment and continuity of wages. It would seem to us that the most promising line of inquiry in this respect would be to seek a means of providing for interchange of personnel between firms temporarily experiencing periods of rush or of slackness. Safeguards would be necessary, and there would, of course, be difficulties in applying any scheme; but something should be possible in this direction. As the problem is a general one, would it not be wise to make it a national matter, and have it negotiated not with one union separately, but for the whole trade, by the Printing and Kindred Trades Federation?

The Joint Industrial Council.

THE Joint Industrial Council of the Printing and Allied Trades, whose quarterly meeting is reported on another page of this issue, is now feeling itself to be very firmly established. It has proved the practicability of co-operation between employers and workpeople in tackling a variety of problems of general importance to the industry, not excluding industrial disputes by which both parties are liable to suffer heavily. It is obvious that no organisation on the side only of the employers or of the trade unions can speak or act with real authority as representing the whole of the great printing industry; but a composite body like the J.I.C.—national in its scope and fairly representative of employers and employed—is an organ through which the whole industry can express its agreed opinion either upon its own domestic affairs or upon affairs in general which affect the printing trade. The lengthy annual report of the J.I.C. presented at last week's meeting recalled how in the past year the Council has effectually performed this important function. In respect of general affairs it has been able to make known the views of the printing trade on such matters as postal rates and regulations, and the amending of the Merchandise Marks Act—matters which touch closely on the consumption of printed matter and the meeting of competition from foreign printers. Then as regards domestic affairs the J.I.C.—which is, by the formation of new District Committees throughout the country, rapidly making itself more thoroughly national in its organisation—has exerted beneficent influence in the direction not only of maintaining peace in the industry but also of assisting the War Orphans' Fund of the Printers' Pension Corporation, inquiring into, and informing the trade upon, matters affecting health in workshops and offices, and pointing the way to improvements in respect of apprenticeship and provision for unemployment. In respect of conciliation the Council, whilst being able to point to various instances of useful service rendered, particularly congratulates itself upon the success it achieved in the recent bookbinders' dispute, the J.I.C.'s part in which stands out as one of the most satisfying features of the Council's existence. In respect of that dispute the annual report stated that "the thanks of the Council, and of the whole printing and allied industries, are due to the members of that Conciliation Committee, to the chairman and to the joint secretaries for the work they performed." We think the trade will universally endorse this statement of indebtedness to those who worked hard and well in the interests of industrial peace.

Curling Papers.

CONSIDERABLE interest is being taken in the subject of curling in paper. This is, of course, a serious trouble for the user, and any suggestions for preventing it would be of great service to the papermaker and the printer alike. The illustrations which we gave in our issue of July 16th, page 45, have attracted a good deal of notice. It is only fair to say, however, that the paper in question, an M G. manilla, was not made in this country. Indeed, it was rather an extreme example of curling. Nevertheless, curling is a well-recognised fact, and British papers are not immune from it. The difficulty is to avoid the defect, which, as a writer on the subject points out, has become particularly prominent since the introduction of mechanical feeders on printing presses. It can be readily understood that the tendency of paper to curl must in such circumstances be a source of loss and delay. Naturally, papermakers are anxious to avoid any defect in their product; but this one of curling presents special difficulties since it arises from the treatment necessarily given in the course of manufacture. Papermakers, however, have solved intricate problems in the past, and the attention focused upon this one might lead to good results.

"THE Setting of Chemical and Mathematical Formulæ" ("Der Satz chemischer und mathematischer Formeln") is the title of the third volume of the book-trade monographs published by the Verlag des Deutschen Buchgewerbevereins, of Leipzig. This is the second and revised edition. Well produced, in paper wrapper, it is priced at M.2.

Printer Wins the King's Prize.

Blue Riband of Rifle Shooting.

At Bisley on Saturday the honours of the year's greatest rifle shooting match were carried off by a representative of the printing trade. The King's Prize of £250, the gold medal and gold badge of the National Rifle Association and £25 were won by Mr. Archie Smith, who is employed as a clerk in the composing department of the printing and bookbinding works of Messrs. W. H. Smith and Son at Stamford-street, London, S.E. Mr. Smith, a slim, clean-shaven young man of 28, has been shooting for only about three years, and owes much of his skill to his membership of Messrs. W. H. Smith and Son's miniature rifle club; he is also a member of the City Rifle Club. He is a former Sapper of the Royal Engineers and lives at Wood Green.

Mr. Smith's score was 226, and his victory was very closely contested, his nearest rivals gaining only one point less. The closeness of the scoring caused excitement to run very high. Mr. Smith brought forward 96 points from the second stage of the competition on Thursday; at 900 yards he totalled 64, but at 1,000 yards he shot even better, and with a score of 66, nearly all bull's-eyes and inners, he brought his total up to 226. A huge crowd watched the final shooting and surged round Smith when he was proclaimed the winner to shower congratulations upon him.

"Chairing" the Winner.

When the cheering ceased, Mr. Smith was hoisted into the old King's Prizewinner's chair, and, preceded by the band of the 2nd Dorsetshire Regiment, playing "See the Conquering Hero Comes," was carried first to the N.R.A. offices, where the usual rifle test was passed satisfactorily, and then to the Umbrella Tent. There the Gold Medallist received from Admiral of the Fleet Lord Jellicoe the many prizes which accompany the King's annual gift of £250. First of these was an autographed portrait of the King himself, then the N.R.A. Gold Medal, and, lastly, the Gold Badge, pinned to his sleeve by Lord Jellicoe.

Within an hour of the completion of the match, Lord Cheylesmore, chairman of the Council, received the following telegram from the King: "Please convey to Sapper A. Smith my hearty congratulations on winning the prize I so gladly give to the National Rifle Association." The telegram also was handed to Mr. Smith as a further memento of his victory.

Luncheon in his Honour.

Mr. Smith received general congratulations when he returned to work at Stamford-street on Monday, and in the afternoon a private luncheon was given in his honour at the Hotel Victoria by Mr. W. T. Welfare, manager of the printing department. It was attended by the heads and representatives of the various departments of the firm, among them being Mr. Margetts, secretary of the "W.H.S." Rifle Club, Mr. Feltham (news department), Mr. F. Major (secretary) and Mr. Odell (overseer, printing department). On behalf of the overseers of the departments a silver cigarette-box was presented to Mr. Smith.

Personal.

MR. W. I. BURCH has been presented with a gold-mounted umbrella and walking stick by the National Committee of the Monotype Users' Association who thereby express their esteem and their congratulations upon his recent appointment to be managing director of the Lanston Monotype Corporation.

MR. A. E. GOODWIN, secretary of the Federation of Master Printers and joint secretary of the Joint Industrial Council, goes by invitation to America at the beginning of October to attend a Chicago convention of the United Typothetæ, which begins on October 15th.

MR. GOODWIN, in inquiring into the conditions and methods of the printing industry of America, will pay special attention to the facilities provided for technical education and to the new Salesmanship Department which has been set up by the United Typothetæ.

MR. F. L. ARMSTRONG, general secretary of the Newspaper Society, underwent an operation at King's College Hospital, Denmark-hill on Monday. On Wednesday morning we learned that the patient was going on as well as could be expected.

MR. C. CRABTREE, of Leeds, representing the printing machinery trade, was a member of the deputation that waited upon the President of the Board of Trade (Sir Philip Cunliffe-Lister) on Friday to discuss the question of the inauguration of a campaign to stimulate the purchase of British goods.

SIR PHILIP GUNLIFFE-LISTER promised full and careful consideration to all the arguments put forward.

DR. NEIL MUNRO, editor of the *Glasgow Evening News* for many years, has been elected a Scottish director of the Berry group of newspapers.

MR. ADAM MURRAY, on the occasion of his retirement from the post of manager of Lennoxmill Print Works, Lennoxtown, N.B.—a position he has held for 23 years—has been presented by the employees with a pair of easy chairs.

MR. F. COLEBAUM, advertising manager of the *Guardian*, the Church weekly, has been appointed manager of that concern.

MR. D. HUGHES PARRY is to edit the *Solicitors' Journal*.

THE King, last week, conferred the honour of Knighthood upon Mr. William J. Morcom, J.P., Holmwood, Caterham Valley, Surrey. Sir William is a well known and highly-respected member of the London paper trade, having carried on business as a paper agent at 49, Queen Victoria street, E.C., for many years. In local government work and the Territorial movement Sir William has taken a very active and enthusiastic interest, and during the war he rendered valuable service in promoting recruiting. He married the only daughter of the late Mr. George Smythe.

SIR LEICESTER HARMSWORTH has purchased Sir Wilfrid Laurier's library, and has presented it to the Canadian Government. It will be placed with the Northcliffe collection in the Canadian Archives Building.

MR. C. A. BANG, O.B.E., who was associated for nearly 25 years with Mr. Heinemann, the publisher, has been appointed an Officer of the Order of the Italian Crown in recognition of his services to Italian literature and science.

MR. J. T. STEELE, of Messrs. Spicers Limited, has been unanimously elected deputy chairman, in place of the late Mr. A. Barton Kent, of the British Export Trade Council. Lord Desborough is president and Sir Wilfred Stokes, chairman.

MR. J. R. FIRTH, governing director of Messrs. P. J. Firth, Ltd., of Sydney, who, with his family, has been on an extended visit to this country and the Continent, leaves for the United States this week. Mr. Firth has been in the market for box-making machinery, etc.

MR. ALFRED L. RICHMAN, co-managing director of L. S. Dixon and Co., Ltd., lately completed his 50th year with the firm.

MR. L. S. DIXON himself, it may be recalled, attained his 81st birthday last year, during his lengthy tour in America. In spite of his years, Mr. Dixon continues to take an active interest in the business and continues to enjoy good health.

MR. T. PARKER SMITH (Smith, Stone and Knight), Mr. A. Barran (Wall-Paper Manufacturers, Ltd.), and Mr. T. R. Fothergill (F. Steiner and Co.), have been elected members of the Council of the Colour Users' Association. Members elected by their various trade groups include Mr. T. S. Cooper (Wall-paper and Litho. Printing), and Mr. J. Reid (Paper-making).

MR. HENRY G. DOWLING has been awarded one of the eleven medals presented by the Royal Society of Arts for his lecture on "Wall-papers" before the members of that Society.

Belgian Printers' Strike.

The growing industrial unrest in Belgium was increased on Monday when a strike of printers was declared. The demands of the workmen include an increase in wages of 12.50 francs per week, and an annual holiday of six consecutive days, with pay, independent of the 10 days allotted for the various public holidays. Conditions are particularly serious for provincial newspapers, especially at Antwerp, where there is a central printing establishment, the employees of which have refused to work. In Brussels a temporary agreement has been reached and newspapers are continuing to be printed. Certain class papers, however, have had to cease publication, among which is the racing paper, the *Journal des Courses de Chevaux*.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. **A boon to all users of Gold Leaf, Foils, &c.**

GOLD LEAF
In all shades & sizes.

RIBBON GOLD LEAF
from ¼in. to 3¼in. wide,
WHITE TRANSFER BLOCKING FOIL
in two qualities.
"FEST" specially prepared for fine work.

METAL LEAF,
ALUMINIUM LEAF
in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

BRONZE POWDERS
60 different shades & qualities in stock.

BLOCKING POWDERS.

EGG ALBUMEN
in Flake and Powder.

GLUE (Best Scotch)
and other brands in stock.

CELLULOID GOLD.

SILVER LEAF.
&c., &c.

The Bookbinder

Notes and News.

Bookbinding and Profits.

There is no improvement to be reported so far as the condition of the bookbinding industry is concerned. For some weeks past all sections have been quiet and the number of union members unemployed has increased. Stationery binders are pinched for orders, and there is much price-cutting in consequence. Normally bookbinding should be a particularly lucrative proposition in the sense that there is very little about it that is unproductive. The compositor has his distribution, his reading, proof-pulling and clearing up, all tending to create a relatively high cost of production and incidentally making it so difficult to assess costs precisely that many printers make no pretence of arriving at them. Instead, they fix on an arbitrary figure which seems low enough and which has at least the merit of covering wages and a bit of something else. Small wonder, then, that there is often a grave doubt as to whether composition is profitable. It is commonly stated that the machine room in a printing office helps to pay for the composing department, and perhaps it sometimes does. Even the machines are difficult to fix costing rates for, however, and then again there is a lot of unproductive time to be taken into account. There is washing up, oiling and cleaning and quite an amount of idle time, all of which costs money and helps to make it an expensive process to print paper.

A Productive Department.

The bookbinding department is more straightforward, especially so when devoted mainly to stationery binding. To begin with, there are the ruling machines, which can give 48 hours of chargeable work in a 48-hour week. For long-run work there are reliable and cheap automatic feeders to increase output and keep the wage bill down. So ruling is a comparatively cheap and certainly a very economical process. Then there is the folding, sewing and making up, all performed by female labour and supported by fast-running machines which are inexpensive to run and quick to set in operation. Here again we can have recorded a full 100 per cent. output. The same thing in the binding department, where, excepting in large establishments there is a great deal of hand and small machine work which is all productive and permits of full output at low cost.

Throwing Profits Away.

Taking these things into account there is every reason for affirming that bookbinding should yield very profitable results. In earlier days, when no effort was made to get at the real cost of things, a rather liberal allowance was made for bookbinding charges and good profits usually did accrue. There is more than a suspicion that when some firms find their costs to-day, and when official examples are set before the trade as a whole, those who make no attempt to ascertain their own costs are inclined to take a figure below those in use elsewhere—this, of course, in order to undercut and get more business. In practice it does not always work out that they get more business; because when one house cuts others follow suit, and so in the end the whole trade suffers. Thus it comes about that a section of the industry which is naturally well placed for making profits is reduced to a precarious condition through the folly of the few.

The Leather Market.

Having said more than we intended on the subject of costs, let us turn to the condition of the market. Leather prices tend to become rather stiff, as is evident from the fact that skivers of good quality are now priced at 7¼d. to 8¼d. per square foot. There has also been an increase in the price of forils. A card just to hand announces sample dozens of red basils at 8d. per foot, roller basils at 9d. and pair basils at 10d. For good class skins the average price for basils is 10d. per foot and as much as 11d. per foot for full binding skins. Thin basils for half binding are quoted 9d. per foot. Special lines of paste grains are offered at 8½d. per foot, plain skivers at 7½d. Rough fleshes are figuring at 11d. per foot, rough goats at 1s., rough calf 1s. 3d. to 1s. 6d., fair calf 2s., hard grained goats 1s. 9d. to 2s., moroccos 2s. to 2s. 3d., pigskins 1s. 6d., anglo-hides 1s. 9d., with second grades at 1s. 7d.

Strawboards.

Other materials remain firm in price, those that are unaltered including bookcloths, buckrams, glues, threads, calico, goldleaf and millboards. Strawboards have eased to an appreciable extent and agents lists are at present based upon £8 5s. per ton delivered for 8 to 18 oz. unlined boards. The reduction corresponds with the summer season and represents what will probably be the low water mark. The present is as good a time as any to buy strawboards, but once again we would urge the bookbinder to compare the relative merits of British and Dutch boards. Price alone does not decide the issue. Rather it is a matter of how many boards and then the comparison in quality, stability in price, and availability. Finally, it is the duty of every bookbinder to buy British goods wherever he can.

Marble Papers.

There are still some bookbinders paying phenomenal prices for foreign marble papers. They do it out of blind allegiance to custom. If they would stop to think, they would appreciate the saving that could be made by buying British marble or printed design papers. The latter do not cost half the price of the Belgian product and they are in many ways superior. Every wholesale stationer can supply them, and in large quantity they can be bought at a big reduction. Where, then, is the wisdom of helping to import bookbinding papers?

Co-operation between Printer and Binder.

One of the best ways in which the printers can co-operate with bookbinders is to familiarise themselves thoroughly with the requirements which they should meet to enable the bookbinder to produce the best books possible. Many printers have done this, but there are some who unconsciously place obstacles in the binder's way. For instance, we often receive sheets in which the margins of sheets of the same forme vary. This makes a great deal of trouble for the binder, and puts him to considerable additional and unnecessary expense in cutting and folding. It is due principally to the carelessness of feeders on presses, and the failure of their employers to instruct them properly.

Effect of Faulty Sheets.

No matter what extra work the binder may put on these sheets in his efforts to offset the results of varying margins, the final product is not as good as it would be if the printers were more careful about this matter.

There is also the matter of the grain of the paper. Every book printer should know that the grain of the text paper of a book should run parallel with the front and backbone of the book. The grain of the paper on which the inserts are printed should run parallel with the grain of the paper on which the text is printed. These are elementary things. Most printers know them, but some printers seem to be in need of this information.

Closer Touch Needed.

Another desirable improvement in the relation between printer and binder would be a means of putting the two in closer touch with each other in regard to such matters as impositions, shortages, etc. At present most of the communications between printer and binder are handled through the publisher. By reason of the legal relationships of the parties this is the logical way, but I believe that better results could be obtained by all three parties if printer and binder could be put into closer touch in the matters which I have mentioned.

Binding Style and Selection of Materials.

I believe that printers do not avail themselves to the fullest possible extent of one of the most valuable services which the binder can offer. This is in the matter of binding style and the selection of binding materials. When you are called upon to offer suggestions to your customers in these matters, you will find it to your advantage to call on your binder to assist you.

Benefits of Association.

I am a strong believer in, and a supporter of, the co-operation idea as it is embodied in trade associations. I believe that there is nothing which is of greater benefit to an industry as a whole than a well-organised and active trade associatson. Inasmuch as it benefits every firm in the industry, it ought to receive the active support of all. It can be effective only in proportion as it receives such support.—Mr. LOUIS SATENSTEIN, addressing the New York Employing Printers' Association.

THE Cercle des Bibliophiles Français et Etrangers, 24, Rue Ernest Renan, Paris, intends to form an experimental printing and binding workshop, where new kinds of type will be designed and tested, and researches made in new processes of engraving and in new kinds of paper.

THE French Syndicate of Electrotypers has sent out a circular stating that, as the cost of metals has been steadily increasing for some months and is now so great that they cannot bear the expense alone, the higher cost of living also making it necessary to pay higher wages, they are reluctantly compelled to make a further increase in prices. The existing increase of 80 per cent. is, therefore, increased to 95 per cent.

British Bookbinding Supreme.

There is at least one business in which this country easily beats all competitors, and that is bookbinding, says a writer in the *North Mail and Newcastle Chronicle*. Convincing evidence of our superiority was afforded at the International Book Fair held at Florence. Englishmen do not take kindly to the foreign style of binding, or rather lack of binding. The popular French novels, with their paper covers, quickly fall to pieces. In these cases, of course, it may be said that the books last just as long as you are likely to want them. But serious historical and critical works, which ordinarily require rather prolonged study, are frequently produced in the same flimsy fnshion. Presumably it is mainly a question of price. In this country there is a demand for well-bound books, and people are prepared to pay the price. On the Continent it would seem that a similar demand has yet to he created.

A Bookbinder Visitor.

Now enjoying a tour through Europe, including England, Mr. Samuel Weinkrantz is returning to his native Poland, which he left at the age of 19 about 40 years ago. When he left Poland he had no capital and his only business asset was a practical knowledge of the bookbinding trade. To-day he is a successful business man, president of the Hano-Weinkrantz Co., Inc., 133, Mulberry-street, New York, and a prominent member of the Master Bookbinders' Association. He branched out in business as he puts it, "without a nickel in my pockets." As time went on he purchased a Sheridan cutting machine and went "on tick" for the $100 payment. Time and effort brought their rewards, however, and Mr. Weinkrantz developed his business until to-day it occupies a space of 10,000 sq. ft. and is equipped to do printing, binding and ruling of every kind. In addition he does an extensive business as a paper jobber, selling to printers and stationers.

Leather and Imitations.

The use of the word "leather" to describe the bindings of books which are bound in material other than leather is prohibited by the Federal Trade Commission of the U.S.A. as an unfair method of competition. The Commission has found fault in this respect with the New York firm of Boni and Liveright, Inc., which, according to the Commission's findings, publishes and sells a set of books under the name of "Modern Library," these books being bound in a cloth binding which is finished to simulate closely the appearance and texture of leather, but which, the Commission says, contains no leather whatsoever. Also on the paper wrapper bearing the name of the book and the author there is printed in conspicuous type the words "Limp Croft-leather." It was also alleged that the concern published catalogues, leaflets and other trade literature in which appeared such statements concerning the bindings of their books as "Modern Library volumes are bound by hand of limp leather."

The Commission prohibits the using of the word "leather," either alone or in combination with any other word or words, except the words 'imitation,' 'artificial,' or 'substitute,' to describe the bindings of books which are bound in material other than leather.

Malpractice in Book Cloth Selling.

A practice of certain bookbinders' supply houses of getting into direct touch with the binder's customers is arousing much concern amongst bookbinders in the United States. The Employing Bookbinders' Association of New York recently passed a resolution disapproving of such practices and calling upon members to discourage them at every opportunity.

It appears that certain bookbinders' supply houses engaged in the selling of cloth and imitation leather, have inaugurated a practice whereby they approach the binder's customers and offer to sell them their goods at a certain price, provided said customers agree to take a considerable quantity within a fixed period. Thereafter, these customers, in giving orders for the binding of books, direct the binders to purchase for the binders' account certain cloths or imitation leathers direct from such supply houses as have made these arrangements with the customers.

The Bookbinders' Association maintains that such practices are unfair to the binding industry in that they take away from each and every binder independence of character, pride in his work, opportunity for the personal touch and self expression, and encourage other binders' supply houses selling other materials, to establish similar practices, the result of which will have a tendency to destroy the character and standing of the bookbinding industry so that it will become merely mechanical in its operation.

Dermatoid Leather Cloth.

We have received from Messrs. E. A. Bristow and Co., papermakers' agents, Temple Bar House, 23-28, Fleet-street, E.C.4, pattern books of Dermatoid products which are adaptable to a number of decorative and useful purposes. "Dermatoid," as its name implies ("skin-like"), stands for a leather cloth or leatherette treated with a wash which renders it waterproof and hard-wearing. The leather cloths have an extraordinary resemblance to leather, with correspondingly correct embossings; they are pliable and easily worked, and, what is most essential in a leather cloth, there is that nice warm feel of leather.

This is particularly the case with the quality BB, No. 905-50, white, which is exactly like soft leather to the touch, a characteristic, in fact, of all grades of Dermatoid leather cloths.

A large variety of embossings are represented in the L.K.Z. series of embossed papers, some of the colour effects, which can be reproduced in the leather cloths as well, being especially pleasing.

The range of Dermatoid products includes a specially-designed set of embossed papers for box-linings. Here again the colour effects are very fine, and, what is perhaps more important for such work, the effects are quite exclusive and absolutely new.

"Dermatoid" products, being absolutely waterproof, can be used for many purposes, such as bookbinding, imitation leather cases, trunks, despatch cases, etc., hat and cap manufacture, motor industry, hard and soft upholstering, shoe manufacture, etc. All the lines are standard grades, of which large stocks are held at the factory of Dermatoid-Werke Paul Meissner A.G., near Leipzig, and it is anticipated very shortly to have stocks in London.

Messrs. Bristow have been appointed sole agents in the United Kingdom for these leather cloths and leatherettes.

Coated Paper and Binding.

The question raised at one of the meetings of the Papermakers' Technical Section regarding defects in coated paper when used in binding operations gives interest to an invention by Mr. N. E. Wainwright. His process is concerned with producing coated paper in so far as breaking the stock at the binding edges or in the creasing is concerned. He has evolved a plan whereby, when the paper is manufactured, it is left with an unglazed strip about half an inch in width which comes where the fold is, so that a catalogue or other printed matter can be bound and folded on this unglazed strip, thus obviating breakage or creasing.

THE proprietors of the *Herts Advertiser*, which this month celebrates its seventieth anniversary, gave a luncheon in the Town Hall, St. Albans, to representatives of the city and county and to prominent members of the printing trade. The staffs of the concern, numbering about 300, have also been entertained at dinner in honour of the occasion.

QUICK ADS, LTD.—Capital £100, in £1 shares; advertising agents and contractors, etc. Private company. First directors: F. R. Samson, H. E. S. Huth and B. G. Boultwood. Registered office: 13, Albemarle-street, W.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

W. SPEAIGHT AND SONS, LTD. (printers, etc., London).—Satisfaction in full on July 1st, 1925, of charge dated March 19th, 1920, and Land Registry charge dated August 18th, 1922, securing all moneys due or to become due.

W. SPEAIGHT AND SONS, LTD. — Land registry charge on Temple Works, 18a, Cursitor-street, E.C.4, dated July 2nd, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £16,000.

STANDIDGE AND CO., LTD. (printers, etc., London).—Issue on July 6th, 1925, of £200 "B" or second debentures, part of a series already registered.

J. W. CHADWICK, LTD. (wholesale stationers, etc, Halifax).—Debenture dated June 23rd, 1925, to secure £1,900, charged on the company's property, present and future, including uncalled capital. Holder: J. W. Chadwick or Mrs. F. M. Chadwick, 4a, Corn Market, Halifax.

WHITE AND FARRELL, LTD. (printers, stationers, etc., Hull).—Debenture dated July 1st, 1925, to secure £3,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Branch Nominees, Ltd., 15, Bishopsgate, E.C.

CAMELOT PRESS, LTD. (printers, etc., Southampton).—Satisfaction to the extent of £3,630, on March 13th, 1925, of debentures dated December 7th, 1891, January 30th, 1893, and May 20th, 1895, securing £5,000.

LITHOPRINT, LTD. (Birmingham). — Satisfaction to the extent of £200 on June 30th, 1925, of debentures dated March 15th, 1922, securing £400.

JAMES WILLING, LTD. (advertising contractors, etc., London) -Mortgage on certain properties at Hythe, Kent, dated July 1st, 1925, to secure all moneys due or to become due from the company to the Westminster Bank, Ltd.

WEST RIDING A.B.C. PUBLISHING CO., LTD. —Mortgage dated June 26th, 1925, to secure £300 and further advances, charged on 77, Hall-lane, Armley, Leeds. Holders: Halifax Permanent Benefit Building Society.

MODERN TRANSPORT PUBLISHING CO., LTD. (London).—Debenture dated June 27th, 1925, to secure £1,000, charged on the company's property, present and future, including uncalled capital. Holders: E. E. Clarke and C. S. Oldfield, 28, Fleet-street, E.C.

GORDON AND PHILLIPS, LTD. (Jacquard card manufacturers, paper merchants, etc., Nottingham).—Three mortgages on certain properties in Nottingham, all dated June 24th, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £1,000, £2,500 and £2,500 respectively.

BRITAINS, LTD. (papermakers, etc., near Leek, Staffs).—Issue on June 16th, 1925, of £5,000 debentures, part of a series already registered.

RECEIVER APPOINTED OR RELEASED

TOTTENHAM PRESS, LTD.—J. A. G. Anderson, of 32, White Hart-lane, Tottenham, N.17, ceased to act as receiver or manager on June 26th, and H. Rainsbury, F.S.A.A., of 65-66, Basinghall-street, E.C., was appointed receiver on June 30th, 1925, under powers contained in debentures dated November 30th, 1923.

EMPHASISING the remarkable growth in the demand in China for foreign-style paper during the past ten years, Dr. Julius Klein, director of the United States Bureau of Foreign and Domestic Commerce, states that China's paper imports had increased from 32,352 tons in 1912 to an annual average of 80,022 tons during the past four years. The class of foreign-made paper in most demand is white, unsized newsprint, suitable for printing books, newspapers, posters and handbills. The paper is imported —largely from Japan and European countries —in bales of 12 reams, 500 sheets to the ream. It is essential that there be as nearly 500 sheets in the ream as possible, for the Chinese customer counts them and is dissatisfied if the number does not accord with the specifications. British suppliers appear to have little hold on this promising market. Japan is the principal factor in the paper trade of China at present and the United States is increasing its share.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE industrial outlook is not improved by the published figures of trade for June. Increasing imports and decreasing exports are as bad an augury as we could wish not to see. The paper trade figures follow the rut, demonstrating the fact that the depression which has settled over British industry generally implies a diminished home demand for paper. Fine paper mills are feeling the draught very keenly and business in that direction is very difficult to secure in anything like bulk. Coated and printing paper mills along with the esparto section and small mills engaged on a variety of standard proprietary papers, may reap some benefit from the increased use of those kinds of papers for magazines, advertising literature and seasonal purposes. Fine papers are, however, more of a reflex index of the actual commercial condition of the country. It is correct in a way to claim that the commerce of England is built up on fine paper and it is no less a correct commentary upon the declining condition of our commerce that its post-war mood dictates lowered standards of quality. A revival in trade, when it comes, will bring back with it a keener appreciation of the business value of good paper.

* * *

HARKING back to the question of curled papers, our own experience is that they are chiefly encountered in tub sized makes. With engine-sized papers the corresponding defect is cockling and waviness. To the printer or manufacturing stationer curling, waviness and cockling are all as one in this respect that he cannot without difficulty and loss of output, feed them into his machines. To some extent he can minimise the trouble when the sheets are fed by hand, because the feeder can manipulate according to requirement and discretion. For longer runs of printing or ruling, however, mechanical self feeders are the order of the day and for their efficient operation reasonably flat paper is essential. A very great deal of time is lost in every factory where imperfectly made or ill-conditioned paper is served out to machines equipped with automatic feeders. First there is the time spent on an endeavour to correct the physical defect in the paper and following that there are innumerable hold-ups at machine.

* * *

INCIDENTALLY, referring to bank papers, we are still waiting to see the English made high grade bank or bond paper carrying a skin surface like the renowned Canadian and States bonds. Here again is something very much appreciated by the average stationer or printer. We are informed that there is no difficulty in imparting this American finish; and in the opinion of one maker it is only a matter of rolling. Our own ideas are different, and American opinion is that they have this little field to themselves.

A PAPER machine which will produce a sheet of news print paper 245 ins. wide at the rate of 1,100 ft. a minute—the largest in the world—has been ordered by the Minnesota and Ontario Paper Co. and will be installed in its paper mill at Kenora, Ontario.

"LA PAPIER" has issued a special number containing a report of the proceedings of the technical congress of the paper industry organised by old pupils of the French School of Papermaking and held at Grenoble on June 21st-23rd, 1924.

THE NATIONAL
Association of Wholesale Stationers

Scandinavian and Finnish Mills Conference

During May, a conference was held in London of far-reaching importance to the paper trade.

It will be remembered that, in the summer of last year, a strong deputation of the National Association of Wholesale Stationers and Paper Merchants with representatives of the United Kingdom Paper-Bag Association and of the United British (Wholesale) Paper-Bag Makers Association (now the British Paper-Bag Federation) visited Stockholm for a preliminary discussion with the Swedish, Norwegian and Finnish Papermakers' Associations on the General Trade Rules governing the sale of paper to this country.

Although all parties to that discussion were armed with plenary powers, a brief survey of the position disclosed so many divergent views that it was decided to ascertain to what extent general principles might be agreed and where agreement was impossible, clearly to define the position for further examination by the parties concerned. This proved to be a wise decision, a greater measure of agreement was reached than at first seemed possible, and an atmosphere was created which promised well for the settlement of such details as remained in abeyance.

On the resumption of the conference in London last May at which representatives of the British Association of Foreign and Colonial Paper Mill Agents were also present, it was found that difficulties centred mainly round the clauses dealing with *Force Majeure* and Arbitration. After considerable debate, conducted on all sides with the evident desire to reach a fair and just settlement, the points at issue were agreed, the Trade Rules signed to come into force on July 15th.

The establishment of Trade Rules or Customs has for years been settled by general agreement in the United Kingdom and the adoption of this principle by the Scandinavian mills is a considerable step forward in providing a basis upon which the paper trade can satisfactorily be conducted. Substantial though this development may be, it did not exhaust the work of the conference.

The settlement of Trade Relationships, the methods of distribution of the mills' products and the general conduct of the business have long been controversial subjects between mills and wholesalers both in this country and abroad. Constant efforts have been initiated by the National Association of Wholesale Stationers and Paper Merchants with one or other branch of the trade to lay down lines of procedure, efforts which have not always been attended with success. Admittedly the solution of the problem is not easy, but if the experience of the discussion at the conference can be taken as a guide, a solution is possible. It is likely that the difficulties may not prove so great in dealing with the products common to the Scandinavian mills as they have in dealing with the more diverse products of the home mills. Be that as it may, a method of business relationship has been established to which it is proposed to give a reasonable trial and by which many of the obstacles to satisfactory trading may be removed.

The object underlying the efforts of the National Association of Wholesale Stationers and Paper Merchants is to establish stability in manufacture, distribution and values. On examination it may be found that manufacturing capacities in some directions are greater than is necessary to cope with present day requirements, that distribution facilities are too highly concentrated in certain areas to the detriment of others, that the effect of depressed trade has caused one or other of the essential branches of the trade to be conducted on lines which are not economic. It is admitted that the trade is suffering from a hand-to-mouth policy which cannot but increase the eventual cost to the user.

It is essential to trade well-being that the whole procedure should be thoroughly discussed and ventilated with a view to the establishment of a basis of operations which may place an important industry on the path to prosperity.

The Scandinavian agreement is a first effort in this direction.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

In the concluding paragraph of our last chaper we dealt with "Vandyke" or negativeless images for offset printing, and gave the formula of the sensitising solution, with which the zinc plate had to be prepared, preliminary to the making of the printing image upon it by means of the Vandyke process.

Sun-Transferring for Offset Work.

A coating of this bichromated fish glue sensitiser is applied, the application being equalised by whirling, preferably in a galvanised metal surround with a gas jet underneath, regulating the temperature so that it does not exceed 80 degs. Fahr. The coated plate is then cooled in a dark place. The copy is placed on the glass of the printing frame, face upwards, the sensitised plate being laid upon this, and the frame closed and perfect contact made. The exposure by means of a good electric light, may take about 15 minutes, although the duration will naturally vary according to the opacity of the paper copy. An actinometer is used for judging the correct exposure. Daylight may be employed for copying if convenient.

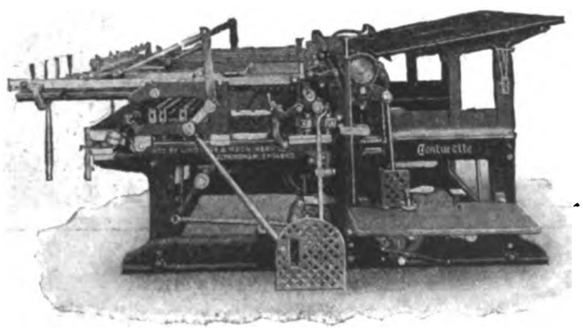
The exposed plate is washed in running water, stained with aniline violet solution, and again washed until the white lines appear. A pledget of cotton wool may be used to gently accelerate development, care being taken to prevent injury to the image. These white lines are now inked up with soft retransfer ink, only sufficient being applied to charge them fully. Spirits of turpentine or lavender oil may be used for this softening, but time must afterwards be allowed for the volatile spirits to evaporate so as to prevent smearing. The plate is now developed with a weak solution of hydrochloric acid (about ½ oz. pure acid to a gallon of water) and the development aided by the application of cotton wool. This will remove the original sensitive film only. When the negative part of the image has been removed, the plate is washed well with water, gummed, and dried. The work is now washed out with the asphaltum tincture, rolled up with black ink, resined, chalked, and etched with the ammonium nitrated etching solution, finally gummed, and is then ready for printing from. There are slight variations of the above methods practised by different process workers, all of which are equally satisfactory in the hands of those who have mastered them; this only goes to show that there is a fair amount of latitude in manipulating this negativeless process when the principles dominating are understood.

The "Father James" Reproductive Process.

There are also recent processes which have been evolved to accomplish the same results as the Vandyke for use in offset printing, but with a different procedure. Such are the "Father James" reproductive negativeless process, the Manul process, etc. Briefly, the Father James facsimile reproductive process consists in taking the actual copy and treating it in a special chemical bath which reacts upon the ink of the image and charges it with a powerfully greasy constituent. The print is then carefully washed to free the plain surface of the paper of all foreign matter; the excess of moisture is extracted by special absorptive methods, and the limp, damp print is then employed as the actual transfer, being run down to either stone or metal plate, just as an autographic circular or similar transferring is done, and then prepared for actual printing purposes in the ordinary manner of the transferring department.

This process is, we understand, secured by a syndicate of printers and publishers, and will probably be placed upon the market for general use by the whole trade as soon as the necessary commercial arrangements are completed.

The Manul Process.



With regard to the Manul method, this is also a proprietary process, and would have to be worked by licencees. This process, like the Vandyke, is a facsimile one from copy, although it employs an intermediate aid by which the thickness of copy or pasted-on corrections do not affect the exposure as with the Vandyke process.

The original itself is in no way damaged, so that a valuable copy can be used without deterioration. This is a very useful process for the making of the machine printing surface in offset work, as the plate is not hand-transferred, the image being produced by photographic means, thus ensuring the sharpest and most exact machine printing surface—practically like working from an original.

As this process is not yet established in England, the proprietors have arranged to have printing plates for the trade made in Holland, where the process is being exploited, as well as in Germany. Unfortunately this necessitates the copy being sent abroad, which is a great drawback and objection, and a disadvantage also from the economic-time point of view. So far as price is concerned they are prepared to produce the printing surface at 50 per cent. cheaper rates than what is charged for any competing process.

Briefly the method of working consists in preparing a glass plate with special bichromated coating; this is dried thoroughly, and then placed with its film surface in contact with the surface of the copy that has to be reproduced. It may be a line or half-tone illustration, or a page of type, or design and decorative matter. The light penetrates the film and is reflected back from the white paper whilst no action is produced on the parts corresponding to the print. This exposed film is accordingly hardened where bright light has done its work, and the unacted-upon portions are dissolved away by

Digitized by Google

The Centurette, made by Linotype and Machinery Limited at Altrincham, Cheshire, is size for size the fastest Two-Revolution machine on the market.

It prints Double Demy at 3,000 per hour, and the quality of the work is above that usually obtained from a two-roller machine.

This result is obtained by the excellence of the engineering work put into this press.

Many Centurettes are in use for colour work.

It is made in two styles—(1) with printed-side-up delivery as illustrated above, or (2) with fly delivery.

Fuller details will be forwarded on application to

the usual development procedure. The ground which remains is dyed with a more actinic colour to intensify the image, and the plate or film then becomes a negative which can be printed from direct upon a zinc plate for use in the offset machine.

This process is being employed by many German publishers for reproducing out-of-print books, and it is also in use in Amsterdam and Holland. We saw in the early part of this year several large publications being reproduced by this method at a large printing establishment near Berlin. If any of our readers are interested, we can put them in touch with the directors of Manul, Ltd, so that they may investigate more closely the possibilities of the process.

Cornwall Press Machine Managers.

Annual Outing.

The Isle of Wight was the venue chosen by the machine managers of the Cornwall Press, Ltd., for their annual outing on Saturday, July 18th, 1925. Journey was made by train to Portsmouth and thence by boat to Ryde.

An excellent luncheon was provided at the "Crown" Hotel, presided over by Mr. H. Langley Jones (managing director), supported by Mr. T. W. Fletcher (director), Mr. J. Griffiths (works manager), Mr. Cyril Smith (secretary), and the overseers and assistants of the various departments of the firm. A pleasant feature of the speechmaking which followed was the feeling of good fellowship manifest between employer and employee. Mr. J. Stride, in proposing the toast of "The Firm," took the company back to the methods of printing over fifty years ago. Mr. H. Langley Jones, in reply, spoke of the growth and development of the firm, and fittingly closed his speech by presenting Mr. J. Stride with a gold watch, suitably inscribed, on behalf of the directors, to mark the completion of 53 years' service. Mr. Reed gave a warm welcome to "The Visitors," Mr. Fletcher replying. Mr. A. J. England, in proposing "The Chairman," spoke of the progressive business methods of Mr. H. Langley Jones, and voiced the appreciation of the employees for his great interest in their welfare. An appreciation of "The Stewards" by Mr. Howell was replied to by Mr. C. H. Lytton and Mr. F. Bird.

Luncheon over, the party went by charabanc for a tour of the Island. Brading, Sandown Bay, Shanklin Chine, Godshill and the Downs were visited—a very enjoyable trip which ended with tea at the "Crown" Hotel. An hour's stroll followed and the party left for home at 7 p.m.

Altogether a memorable day, which the stewards and every one present can look back upon with great satisfaction.

Good service to industry generally, including the printing and allied trades, should be rendered by the newly formed Association of Special Libraries and Information Bureaux. Following a highly successful conference held at High Leigh, Hoddesdon, in September, 1924, of those interested in special libraries and agencies for the collection, treatment and distribution of information, a representative standing committee was appointed to ensure continuity of the work, and to arrange for a second conference. The standing committee has been fortunate in obtaining assistance from the Carnegie United Kingdom Trustees, and the proceedings of the first conference have just been issued. The committee has decided to name the body thus called into being "The Association of Special Libraries and Information Bureaux." The second conference of the Association will be held at Balliol College, Oxford, during the week end 25th to 28th September, 1925. Full particulars can be obtained from the organising secretary, at the offices of the Association, 38, Bloomsbury-square, London, W.C.1.

The Government have decided that the concluding stages of the Rating and Valuation Bill, which is making slow progress in Committee, must be carried over until the autumn sitting.

When writing Advertisers, Please mention "The British & Colonial Printer & Stationer."

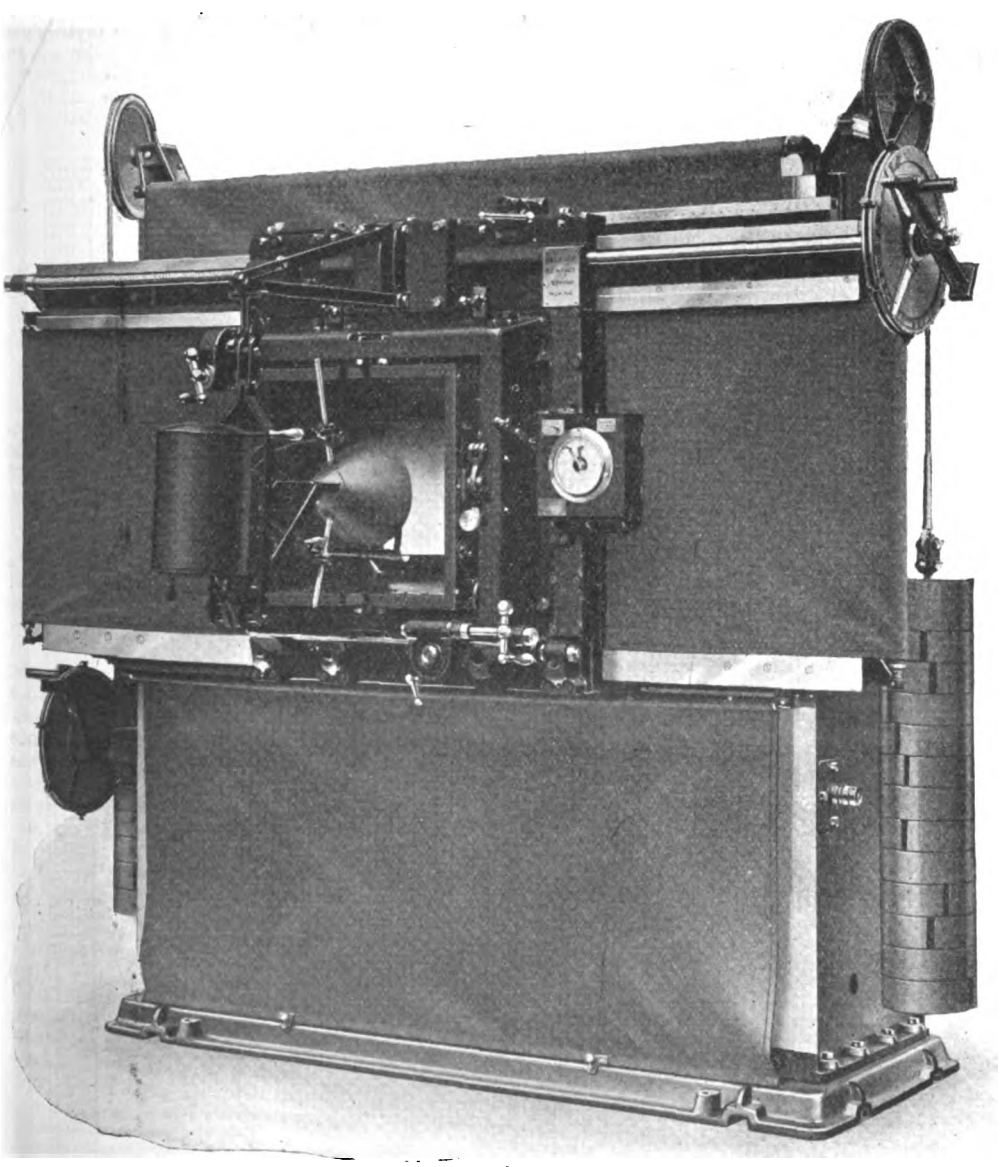
The "Printex" Negative Printer.

The Making of Photo-Litho Plates.



It would seem to be a fact, despite the high claims made by the German lithographic industry, that in regard to the most up to-date photo mechanical developments of planography, such as photo litho, this country is ahead of the Fatherland. At any rate it is the case that British-made photo-litho apparatus is at the present time being sold to German printers—a fact that is eloquent in praise of British enterprise in this particular line of work. We were given an opportunity the other day of inspecting the latest model of the new "Negative Printer" made by Pictorial Machinery, Ltd., and were interested to learn that this machine was due for shipment to Leipzig. The "Printex" negative printer, to the introduction of which we have previously referred, has now been perfected, and it will doubtless be of interest if we give herewith illustrations of the latest model together with a few further particulars.

The purpose of the negative printer, it will be understood, is to produce lithographic printing plates by the printing down upon metal of a photographic negative. In this machine the metal plate is held in a fixed position whilst the negative is moved about as desired, the machine being adapted to print the image repeatedly upon the metal, the placing of each repetition being guaranteed accurate to one-thousandth of an inch. The machine is a fine piece of precision engineering, and for the excellence of its manufacture as well as for the ingenuity of its design it has called forth very high praise from both engineers and printers who have inspected it.

In our first illustration, the massive framework seen towards the middle of the machine embodies the negative carrier, the exposure mechanism, etc., together with hanging arc lamp. The whole of this composite unit is adapted to be moved horizontally to right or left by hand-operated screw mechanism. Vertical motion is also provided for, the negative-carrier, together with the horizontal slides upon which it moves, being counterbalanced as seen in the illustration, and being adapted to be hand actuated by screw mechanism. Each of the two screw mechanisms is provided with a large dial graduated in thousandths of an inch. The precision of movement and ease of operation are best indicated by saying that this part of the mechanism is the same as in the "Lithotex" step-and-repeat machine.

2. Back View, Showing Plate-Bed Horizontal.

1. The "Printex" Negative Printer: Front View.

A notable feature in respect of the negative carrier is the fact that vacuum pressure is dispensed with, and the negative is forced against the printing plate by direct mechanical action. This direct pressure is applied at a number of points around the negative, and, by an ingenious contrivance, is distributed so that pressure at all these points is equalised and the negative uniformly pressed into perfect contact. The use of negative glass of uneven thickness is thus made practicable, whilst film or paper negatives may also be used. During the time when the negative and printing plate are pressed into contact, a lamp is automatically lighted and a bell rung, indicating unmistakably that contact has been made and warning the operator against inadvertently actuating the machine. For manipulation of the negative, the negative carrier falls forward on its hinges to bring the negative into horizontal position. This movement is controlled by chain and sprocket mechanism.

To the right of the negative carrier in the illustration, will be noted an automatic time clock. This accurately times the exposure and at the end of the period specified, say three minutes, it automatically closes the shutter. This is a feature that greatly facilitates the obtaining of reproductions uniform in quality.

Our second illustration shows the other side of the machine, and there is seen the plate-bed turned into horizontal position for the manipulation of the plate. This movement of the plate-bed can be actuated by hand, like the other operations of the machine; but can, if desired, be done by motor. On this bed the plates are gripped and held taut in the same manner as on the offset printing machine, and the insertion or removal of a plate is as simple a matter. The bed can be made suitable for plates of any of the sizes ordinarily used in the

trade, or can be adjustable so as to take several sizes.

The complete negative printer weighs about four tons and requires a space of about 18 feet square by 10 feet high.

An interesting auxiliary, which is here illustrated for the first time, is the "Pictorial" photo lithographic coating, developing, whirling and drying apparatus. This is something very different from the ordinary hand whirler familiar to all who deal with photo-litho plates. It will be noted that the whirlable table for holding the plate is arranged within a tank, and provision is made for water to be sprayed on the plate from the side, an outlet being arranged beneath the table for the effluence. Coating or developing solutions are poured in through a funnel in the centre of the cover, and, the table being motor driven, centrifugal action uniformly distributes these solutions over the surface of the plate. The

"Pictorial" Coater, Developer, Whirler and Dryer.

weight of the cover, by the way, is counterbalanced in the manner shown. Speeds of rotation of the table ranging from 30 to 120 revolutions per minute are obtainable through the medium of an adjustable friction gearing. For the drying of plates, electric heating elements are embodied in the cover, and a small electric fan, which is contained in an air scoop, blows air through a filter and then past the heating elements and so on to the plate. The whole apparatus appears to us to be a most useful and practical adjunct to the plate-maker's equipment.

MR. W. STAFFORD SHERWELL, who was for many years associated with the business of Messrs. Dobson, Molle and Co., Ltd., St. Clair Works, Edinburgh, purchased by Messrs. E. S. and A. Robinson, Ltd., of Bristol, has now started business on his own account, trading as the Sherwell Service Press, 57, York-place, Edinburgh. He has taken over the old-established house of Messrs. Peddie, Ewen and Co., and will develop the existing branches of that business, including printing and the sale of paper and stationery. In view of his long practical experience in poster printing, special attention will be given to this class of work. Mr. Sherwell has entered into association with several well-known firms, specialising in all forms of printing office equipment, publications, etc., and is thus in a unique position to render excellent service.

Lithographic Trade Review.

NOTES AND NEWS.

THE holiday season is now making itself definitely felt, and the lithographic trade appears to be experiencing generally the slackness that this time of year usually brings. A slack period necessarily means some upward movement in the number of workpeople unemployed, but the litho branch of the industry has no cause for anxiety in this respect, as the general trend of things is undoubtedly in the direction of improvement.

TO BE kept always fully occupied appears to be the happy experience of the new business, Phototype, Ltd., to whose establishment at West End lane, New Barnet, we recently referred. It will be interesting to watch the history of this concern, for it represents a development in a direction which seems to us to hold big promise for the future. Its special province, readers will remember, is photo-litho reproduction of letterpress text and other black-and-white matter, whilst arrangements have been made for supplying the trade with ready printed-down photo litho plates in all sizes.

THE subject of charges for the production of photo-litho negatives and plates has been exercising the minds of the council of the Federation of Master Process Engravers, who have made endeavours to procure a scale rate that should be generally applicable. A number of suggestions have been received, but we understand that as yet it has not been possible to agree upon any given scale as the correct or most suitable one. The matter is still under consideration, and as soon as agreement has been effected the scale will be printed and circulated to the trade.

WE were shown, the other day, some admirable examples of varnished lithography in colours—they were fruit tin labels, to be precise. The printing was of a character to make big demands upon both the printer and the paper he used, for it involved heavy backgrounds, reproductions of fruit in natural colours, delicate ornamentations, and lettering both light and heavy, some of it in reverse. The samples were shown to us as specimens of what is being done with the esparto litho printing paper, of which Messrs. Allardyce and Co., Ltd., make an announcement in this issue. The excellent register obtained, and the bright and clean appearance of the finished varnished proofs seemed to us to speak very convincingly for the good qualities of this esparto paper.

ON the subject of paper for offset printing much has been said and something remains to be understood. Not all that has been spoken contains value of a practical sort, and much of it is merely confusing to the maker of paper whose knowledge of paper is confined mainly to manufacture. In search of an ideal paper at a popular price some merchants have introduced cartridge papers, which it must be admitted have favourable characteristics, due largely to the entire use of bleached sulphite pulp. Hardness, finish, whiteness and strength in sufficiency are all embodied in the type of paper we visualise, but there is one great drawback and a very fatal one where printing on two sides is concerned, the paper is too transparent in relation to its substance. The British papermaker, with esparto at his command for admixture in the furnish commences upon the making of papers for offset printed booklets or colour work, covers and all the rest of it, with a pronounced advantage. Next to cotton, which is all but debarred by price, esparto is the friendly material to the printer.

REVERTING to offset printing it should be clearly grasped that the rotary offset press has taken three parts of the field hitherto the domain of the flat-bed lithographic machine, with the result that the bulk of the flat-bed machines are either idle or on the scrap heap. Those that remain are keeping to themselves bronze and colour work on coated chromo paper, the colour work being of a character which belongs to the last generation. The offset press prints commercial stationery on any class of paper, although for delicacy of effect and ease of working it prefers papers with a dead finish which just happens to coincide with the typewriting machine's liking for bond, bank and parchment papers. In the general printing sphere, the offset press has a special forte for booklets with or without illustrations and here again it can make use of any sort of paper, with a preference for hard-sized antique, cartridge or matt-finished printings. It does not like coated papers and there is no need nor justification for them having regard to the fact that they were only brought into existence to counteract the shortcomings of letterpress half-tone printing and the lithographic stone process.

A REPRODUCTION of a water-colour drawing on coated art or chromo paper is an anachronism which no artistic mind can ever forgive. The same type of mind must therefore turn with a hearty welcome to the offset press which can retain all the atmosphere and colour value of a sketch by reproducing it on similar paper to that on which the painting was made. Or for cheapness and equal effect in the mass the ordinary rough cartridge can be employed. Now, lest we be understood wrongly, let it be plainly stated that for cheap and downright commercial reproduction of colour objects, say a pair of shoes, an inlaid cabinet or a suite of furniture, the letterpress three or four-colour half-tone process on coated art paper will still find work for coating mills.

PRINTING direct from a photographic film is a proposition that is now occupying the attention of a number of advanced workers. Mr. Frank M. Walsh, a prominent New York photogravure specialist, returned recently from a tour of Europe enthused by the possibilities of what is known as the Sperroti process, named after the inventor, Marion Sperroti of Turin, Italy. By this method a photo is taken of the matter to be reproduced, and a positive is made on a film made of special composition manufactured under patents obtained to cover the world by the Agfa Co. of Germany, the largest aniline combine in the world. This is then treated by special chemicals, dried out and can then be clamped to any press by special adjusters. By a slightly different treatment it can be attached to an offset press. It is then ready to print in the usual manner. Mr. Walsh maintains that the new process will enable small newspapers to have pictorial supplements for low cost and in colour should they so desire. He points out that the initial cost of the process is for film and preparation and that no further cost is involved. The film will hold for 25,000 impressions before a new one is required.

Offset Printing and Photogravure.

How They Aid the Advertiser.

By DAVID GREENHILL (Sun Engraving Co., Ltd.).

Printing, being a progressive science, offers endless opportunities for development. Possibly the two greatest developments of recent years have been in the direction of offset printing and photogravure.

Offset printing is, I suggest, a natural development of lithographic work; and photogravure, or rotogravure, as it is sometimes called, is, I submit, the natural development of ordinary process engraving and letterpress printing, although, of course, it differs from them very materially in some essential points. Photogravure does not seem to be so well known in this country as offset printing, although abroad it makes very rapid progress.

These two developments of printing are the most remarkable developments that have taken place for a very long period in the printing industry. How far-reaching they will be in their general effect only time can show, but, realising the vital importance of both, I propose to confine my efforts in this paper to some thoughts in connection with these two very interesting processes.

Advertising relies almost entirely on printing to tell its message. The power of the picture, too, becomes increasingly evident in advertising, and the great advantage of the new processes to the advertiser is in their power to reproduce pictures well.

It is not for me to differentiate between the respective merits of offset and photogravure. They each have a great part to play, and I would like to suggest that their part lies more in the direction of meeting the increasing demand for illustrated work in advertising rather than in competing against or displacing the older processes, although to some extent this latter must happen, and it is good that it should happen.

One sometimes hears the suggestion that offset and gravure will supersede or almost replace letterpress and litho. Whilst it is proverbially unsafe to prophesy, I think it is fairly safe to say that in our time, at any rate, the older processes will not be displaced. Rather would I suggest that the competition with the new processes will lead to better methods for the old, and this will be to the common good, in much the same way as the competition with electricity and gas has proceeded. Electricity with all its powers and advantages has had to fight all the way, and gas has fought a very wonderful rearguard action, whilst it at the same time has developed new spheres of influence, and so it will surely be with our well-established and deep-rooted methods of printing in their fight against the newer methods.

Offset Possibilities and Limitations.

One of the main advantages of offset is, of course, the fact that it will print reasonably well on many kinds of paper, particularly on the rougher varieties; also that it is possible to duplicate quickly and cheaply, thereby producing very large numbers in a short space of time on an economic basis. Offset seems to lend itself rather to the bigger work than the smaller. There are very few, or comparatively few, small offset printers at work.

Although I find offset is good, and some very splendid achievements have already been attained in the way of quality, there is yet something wanting in the way of improvement in the bulk of offset work to make the final result a little more convincing. It is, I fancy, for this reason that although some perfectly wonderful things are done particularly in the States, with magazine covers, one generally finds that on the inside coloured advertisement pages where great fidelity to the original, fine detail and a great range of colour is essential, the ordinary three- or four-colour process still holds sway.

With offset, as in nearly all other processes, to get the best results one must understand the limitations as well as the possibilities, and that is why the large magazine cover in offset is so effective; the artist creates an original suitable for reproduction by offset and secures an economic and a very beautiful result. It follows, therefore, that the skilful advertiser and the skilful artist would so prepare his design that the process could reproduce it faithfully and to advantage.

To take an extreme example of what I mean, it would be useless in the present stage of development to expect the offset process on a commercial basis to reproduce the fine Gallery pictures painted in oils, full of rich colour and gradation. Offset would fail on such a subject in competition with the odinary three- or four-colour process, but on the other hand it would be fair to expect a reproduction of a good water-colour or crayon drawing, and more particularly so if the treatment be broad. Such a subject would not only reproduce splendidly in offset but would be economical as against almost every other process. Good bold lettering, label work and ordinary letterpress all reproduce well and economically in offset.

Offset shows possibly to greatest advantage on subjects which look well when reproduced with a matt surface, on papers with a natural surface, and where the colour scheme is comparatively simple. I do not mean for a moment by this that offset cannot reproduce the more elaborate colour schemes; it undoubtedly can, and does, but it will not show to advantage in competition against other processes in this direction, but on the simple colour schemes, many of which are so very attractive and useful in advertising, offset is pre-eminent.

There is little doubt, too, that we are on the threshold of a colour age in advertising, and in this direction offset will unquestionably be more useful than ever. To my mind, improvement in offset should be in the direction of increasing the possibilities of reproducing fine detail and in increasing the depth of colour and scale of gradation

(To be Concluded.)

What Print Owes to Paper.

A Sidelight on History.

The correspondence in *The Times* a few months ago on the subject of early steam printing in 1814, containing some references to the first Fourdrinier papermaking machine of contemporary date, reminded Mr. Chas. T. Jacobi, the well-known printing expert of London, of some of the traditions of the old Chiswick Press, with which he was actively associated for many years. This correspondence has induced Mr. Jacobi to contribute to *Spalding's Quarterly* a few notes to show what printing owes to paper. The existence of a small paper factory at Chiswick, he points out, led to the establishment in the same locality of a printing house, subsequently known as the Chiswick Press and famous among book lovers for its productions. Mr. Jacobi then goes on to explain the circumstances leading up to this association as follows:—

The first Charles Whittingham (1767-1840) was a native of Warwickshire, and apprenticed in Coventry. On completing his term he came to London, and in 1789 started a small printing business in Fetter-lane, which gradually grew and necessitated his acquiring other premises in London. Although a busy man he was interested in various activities, which included that of paper manufacture, as he needed paper of a good texture and of a fine and even finish for the printing of small illustrated books for which he was then acquiring a reputation. In 1809 (twenty years after commencing business) he established at Chiswick the paper mill already referred to. This was on the Mall facing the river. As he found that this mill required much of his personal attention, and, at that period, the distance between London and Chiswick being somewhat inconvenient, he in 1810 started a press at the High House, where he was able to reside, and adjacent to the mill. Being on the spot he was able to give more personal attention to both "paper and print." An occasional journey up to town kept him in touch with his other printing house which he had left in charge of his foreman. This was eventually closed down and the printing work concentrated at Chiswick.

Prior to his removal to Chiswick he had also been interested in other inventions, one being the first iron handpress which was designed by Earl Stanhope—this I mention to show the versatility of the man. The adoption of this iron press marked an interesting stage in the craft of printing, because since William Caxton—in fact, since the first press was set up in the fifteenth century—the former presses had all been constructed of wood. Whittingham is said to have purchased the first Stanhope press, and within another year he had bought four more, so well was he satisfied. One of these (No. 5, and dated 1804) is still in existence and was on view, and moreover in active work, at *The Times* pavilion at the exhibition at Wembley last year. As a compliment to the inventor Whittingham named his printing house, then in London, the Stanhope Press.

It was a little later on that he became interested in the subject of papermaking, and it was a tradition of the Whittinghams that it was St. Leger Didot, a member of the family of celebrated French printers, who brought to England the first device for the machine manufacture of paper; and this was said to be the original invention of another Frenchman named Louis Robert. It was introduced to the notice of Henry Fourdrinier, a papermaker of Two Waters in Hertfordshire, an Englishman, but of Huguenot descent. He was a friend of Whittingham and used to supply him with some of his paper.

Fourdrinier much improved on the original idea, and the first paper made on this machine was sent to Whittingham, who subsequently installed at his mill one of these Fourdrinier improved machines. Although Whittingham never employed power for printing purposes, he was one of the first to adopt steam power for papermaking. Coincidentally with the starting of the paper mill a certain Thomas Potts had discovered some system of extracting the tar from old ship ropes and for purifying this and converting it into a suitable material for the making of paper. Whittingham purchased the secret and engaged Potts, who died in 1811, to superintend the factory for producing this raw material. This added to the pulp produced, with the aid of Fourdrinier's machine, a strong paper of smooth or velvety surface, and of more uniform thickness than that made by hand. So much was this paper esteemed that Fourdrinier himself became one of Whittingham's principal customers for this special manufacture.

From this account it will be observed that it was entirely due to the establishment of this mill at Chiswick in 1809 that Whittingham was induced in 1810 to commence printing in that same locality at the High House, which we repeat was quite near the mill.

In 1823, Whittingham, finding that his printing business was developing so fast that he could not give the necessary time for the supervision of the mill, disposed of it to a Mr. Nichols.

The Whittingham interest in the press ceased in 1880, and the direct line of the second Whittingham became extinct in 1916. My own active management of the press ended in 1919, when it was incorporated as Charles Whittingham and Griggs (Printers), Ltd., and in 1922 I finally retired from my position on the Board as the Consultant Director.

PAPER BIBLIOGRAPHY.—A useful index of papermaking literature is furnished by the Technical Section of the Papermakers' Association in their latest brochure, entitled "Bibliography of Periodical Publications on Papermaking and Allied Subjects during 1923," price 5s. The items are carefully separated under subject headings, alphabetically arranged, and are taken from Continental and American as well as British sources. The handy brochure, which runs to 40 pages, conforms to the size and style of the Section's Proceedings.

PHOTOS BY WIRE.—Examples of photographs transmitted by telephone wire were shown last week to the Royal Society, and these included landscapes, interiors, portraits, and X-ray photographs and a facsimile of a cheque complete with signature. They had been transmitted from distances ranging from about 100 to 3,305 miles. The length of time taken in transmission depends upon the size of the photograph. A photograph 7 by 5 inches would occupy about 7½ minutes. The system will enable photographs of events taking place thousands of miles away to be printed side by side with the telegraphed or cabled report.

THURSDAY, JULY 30, 1925.

Mr. F. L. Armstrong.

TRIBUTES from all parts of the world and from all ranks of people bear testimony to the high place which the late Mr. F. L. Armstrong won for himself in newspaper and allied trade circles. Viscount Burnham, on his way to Australia, cabled to Mr. Arthur L. Woodhead, the president of the Newspaper Society, asking him to convey to the relatives "the deep sorrow of his friends journeying to Australia upon hearing of his death." The president of the Employers' Federation of Envelope Makers and Manufacturing Stationers (Mr. T. Owen Jacobsen), has received the following letter, addressed to him on behalf of the Postmaster-General: "I am asked by the Postmaster-General to say that he learns with regret of the death of Mr. Frederick L. Armstrong, the secretary of your federation. The loss to the federation must be a severe one, and the cordial relations existing between the federation and this department were largely due to his personality." From chess circles also Mr. Armstrong is sadly missed. It is recalled that during the war the City of London Chess Club undertook to provide at any time he might wish it an opponent for the late Mr. Bonar Law, who found relaxation during that trying period in the game of chess, and Mr. Armstrong many times undertook the duty of opposing Mr. Law over the chess board. The high esteem in which the deceased gentleman was held was demonstrated in a striking manner by the large and representative gathering which attended the memorial service on Tuesday at St. Bride's Church, Fleet-street, to which reference is made on another page.

* * *

Six Months' Paper Imports.

STATISTICS relating to both imports and exports of paper and cardboard for the first six months of the year present a moderately satisfactory showing when placed beside the figures of trade generally of the country. Paper imports last month were 1,117,850 cwts., of the value of £1,156,784, an increase of 181,106 cwts. (19·3 per cent.) and £201,152 (20 per cent.) as compared with June of last year. During the half-year ended June and the corresponding period of the two preceding years the quantity and value of paper arrivals in this country were:

1925	...	6,876,414 cwts.	£7,052,231
1924	...	6,259,702 „	6,403,172
1923	...	5,678,352 „	6,182,836

During January-June of the present year imports were larger by 616,712 cwts. (9·8 per cent.) than during the corresponding six months of last year, and exceeded those of the first six months of 1923 by 1,198,062 cwts. (21 per cent.). In value the returns for the first half of the year indicate an advance of £649,059 (10·1 per cent.) as compared with last year and £869,395 (14 per cent.) as compared with 1923. Of the paper imports during January-June last, packings and wrappings (amounting to 2,162,996 cwts.) represented 31·4 per cent. of the total quantity received, and surpassed the shipments of the corresponding period last year by 339,263 cwts. Strawboards (1,843,677 cwts.) registered 26·8 per cent. of the total, a comparative advance of 45,088 cwts. Printings (1,785,920 cwts.) were 25·9 per cent. of the total, and marked an increase of 85,960 cwts., whilst millboards (679,462 cwts.) were larger to the extent of 60,779 cwts.

* * *

Printings.

REGARDING the imports of printings during the first six months of the year, Norway (415,019 cwts.) occupies the most prominent place, a position that was held by Finland in the corresponding periods of the two preceding years. Shipments from Norway during January to June show a big increase of 239,805 cwts. as compared with the corresponding six months of last year. The second position is taken by Newfoundland (383,742 cwts.), whose supplies appreciated to the extent of 49,538 cwts. Consignments from Finland (342,743 cwts.), Sweden (308,622 cwts.), and Germany (102,386 cwts.) show a falling off, the most notable decline being reported on the part of Finland, where there was a drop of 213,684 cwts. Printings from Canada have been in greater demand in this country, shipments from that quarter having risen from only 1,892 cwts. in the first six months of last year to as much as 87,990 cwts. during January-June of the present year.

State of Employment.

Reporting on the state of employment in the paper and allied trades during June, the *Ministry of Labour Gazette* states:—Employment in the paper trade remained fair on the whole; in the brown paper section a good deal of short time was still worked, but in other sections full time was fairly general.

With letterpress printers employment continued fairly good; at Bristol and Newcastle there was an improvement, but at Leeds and Leicester a decline was reported. Electrotypers and stereotypers continued to be well employed.

In the lithographic printing trade employment continued fairly good and was better than a month ago in London and Manchester. With lithographic artists in London employment was again fair; in Manchester, it remained slack and was slightly worse than during May.

Employment with bookbinders in London was reported as moderate; it was again fair at Edinburgh, but remained bad at Leeds and Manchester.

The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 4·9 at June 22nd, compared with 5·1 at May 25th and 5·1 at June 23rd, 1924. In the paper and paperboard industry, the percentage was 6·7 at June 22nd, compared with 7·4 at May 25th and 7·2 at June 23rd, 1924. In the cardboard-box, paper bag and stationery trades the percentage was 6·2 at June 22nd, compared with 6·4 at May 25th and 6·9 at June 23rd, 1924.

Colonel J. Y. Foster, V.D., J.P.

Seventieth Birthday Celebrated.

In celebration of the seventieth birthday of Lieut.-Colonel James Yates Foster, V.D., J.P., senior partner of Messrs. Joseph Foster and Sons, Preston and London, personal and business friends and the whole of the employees were invited to dinner with members of the firm at the Public Hall, Preston, on Saturday evening. A company of about 500 assembled, and the gathering was a great success.

The firm of Joseph Foster and Sons was founded in 1860 by Joseph Foster at the age of 29, in premises in Avenham-street, Preston, specialising in the manufacture of hand-fed newspaper folding machines, in which he was an expert. He speedily had this trade almost entirely in his own hands, the machines being installed in nearly every newspaper office in the country. After a few years, having taken additional premises to cope with his increasing business, he moved to St. Paul's-square Ironworks, where, in addition to the previous operations, he commenced ironfounding, and later he purchased Peel Hall Foundry, Preston.

Newspaper Printing Machinery.

In 1871, in conjunction with Mr. Walter Bond, what was known as the "Prestonian" newspaper web printing machine, to print from either movable type or stereo plates, or a combination of them, was patented, and the first machine was made to the order of Mr. George Toulmin, proprietor of the *Preston Guardian*. For a while this machine had a great vogue. In the meantime, the works had again become too small, and in 1877 Bow-lane Ironworks were designed and built, thus marking a further development of the business.

Stereotyping was at that time a more or less secret process, but on its becoming better understood in later years, the "Prestonian" gave way to the form of machine which is now in general use, and the patent for this class of machine was taken out by Mr. Foster in 1881.

For many years previous to this time Mr. Joseph Foster had had the assistance of his two sons, Frank Foster and James Yates Foster, both of whom had been specially educated and trained for the business in all its practical branches. The former developed into what is known as the outside man, and became well known in the newspaper world, especially in London; and the latter, as the inside man, took command of the works. The sons were taken into partnership in 1882.

A Progressive Firm.

In 1886 the necessity for further premises was again manifest, and the extensive works known as the Soho Foundry were bought. The present London works, situated in Whitefriars street, have been occupied since 1889. From that time forward the progress of the business has never faltered, and the persistent optimism of the firm is shown by the fact that still more land has recently been bought ready for further extensions.

In 1900 Major Frank Foster passed away, followed in 1913 by the founder of the firm, leaving the youngest member of the trio as sole proprietor. He, in turn, admitted his two sons, Major John Hendry Foster, T.D., and Mr. Frank Foster into partnership in 1922, Major Foster presiding over the Soho Foundry and Mr. Frank over the Bow-lane works and the London works. Lieut.-Colonel Foster, now having completed his 70th year, does not take the same active part as formerly, but is always at hand in an advisory capacity.

Notable Public Service.

Colonel Foster became a member of Preston Town Council in 1893, and held the office of Mayor 1899-1900, being elected an alderman in 1901. He has been one of the trustees of the Harris Orphanage since 1900, received his commission as a Justice of the Peace in 1904, and is also an Income-Tax Commissioner. Three members of the firm have served in the Territorial Artillery. The late Mr. Frank Foster was commissioned 2nd lieutenant in 1882, and retired with rank of major shortly before his death. The present senior partner became a second lieutenant in 1887, and after commanding two brigade of guns in succession, retired with the rank of Lieut.-Colonel in 1909. Major J. H. Foster, T.D., joined as second lieutenant in 1903, and served through the war till invalided home in 1918. The three partners are well known Freemasons.

At the dinner Colonel Foster had the support of tne Mayor of Preston (Mr. J. R. Hodgson), the Town Clerk (Mr. A. Haworth), the Right Hon. T. Shaw and Mr. A. R. Kennedy, K.C. (M.P.'s for the Borough), Mr. Stromeyer (chief engineer, Manchester Steam Users' Association), Mr. T. Dodd (clerk to the Justices), the Chief Constable (Mr. J. P. Kerr Watson), Mr. G. Toulmin (*Preston Guardian* and *Lancashire Daily Post*), and many other prominent townsmen. Messages of regret at inability to be present were received from, among others, Mr. Scott and Mr. Guthrie (*Manchester Guardian*), Mr. John Toulmin (*Preston Guardian* and *Lancashire Daily Post*), Mr. A. Burchill (*Liverpool Courier*), Mr. F. Goulding (*Daily Mail*, London), Mr. W. H. and Mr G.F Toulmin (*Preston Guardian* and *Lancashire Daily Post*), Mr. D. Jeremiah (*Manchester Evening Chronicle*), Mr. F. Tillotson (*Bolton Evening News*), Mr. D. C. Thomson (*Dundee Courier*), Mr. J. A. Barrow (*Daily Herald*), Mr. A. McMillan (*Western Gazette*, Yeovil), etc.

Employees' Gift.

In the course of the proceedings there was a presentation to Colonel Foster by the employees of a handsome silver tea service and salver, suitably inscribed. This duty fell to Mr. J. Mayor, the oldest employee, now in his 50th year of service, who referred to the happy understanding between the firm and the employees, and the kindly consideration ever shown to them by Colonel Foster.

The latter, in accepting the gift, referred to the occasion as one of the proudest moments of his life, surrounded as he was with his workpeople in harmony and amity. Proceeding to make a speech filled with interesting reminiscences, Colonel Foster made feeling reference to the very harmonious relationship that had always existed between the firm and its employees.

THE Department of Overseas Trade desires to remind United Kingdom exporters requiring information on overseas commercial matters that it is always desirable to approach the Department rather than to write directly to the Department's representative posted in the market concerned. It is frequently the case that the information desired is already available in the Department, and direct application to the Department thus results in the saving of much time.

Personal.

SIR DAVID HUGHES MORGAN, chairman of the *Western Mail*, has been presented by the departmental managers of that journal with a gold cigar case in honour of the baronetcy recently conferred upon him.

MR. HENRY CROSSLEY, of Wetherby, Yorkshire, chief proprietor of the *Wetherby News*, this month celebrates his diamond jubilee of business life.

MR. RICHARD KELLY, the president of Messrs. R. Hoe and Co., the well-known printing machine manufacturers, of London and New York, is at present in London.

MR. C. E. MONTAGUE, chief leader writer on the *Manchester Guardian*, is retiring from the staff of that newspaper at the end of the year, thus severing an active connection which has extended over a period of thirty-five years. He will, however, continue to act as a director of the paper.

MR. F. C. SUMNER, the manager of the *St. Helens Newspaper and Advertiser*, has won the Sir Henry Seton-Karr golf cup for the second year in succession.

MR. B. ROGERS was last week appointed teacher of typography for the printing classes of the Birmingham School of Arts and Crafts.

THREE Birmingham reporters have just reached their jubilee, namely, Mr. W. H. Durant, *Sutton Coldfield News*; Mr. J. Stevenson, *Aston News*; and Mr. Barton Eckett, *Erdington News*. Each is over 70, and is daily at his duty. Something like a record for one office, that of the *Birmingham News*, from which is issued a series of local weekly newspapers.

MR. HUGH W. DAWSON, of Edinburgh, has withdrawn his nomination for the presidency of the Institute of Journalists made by the Bristol branch of the Institute.

SIR FREDERICK BECKER, accompanied by his son, Mr. F. G. L. Becker, has left for the Continent and Scandinavia on an extensive trip, and with some very important business to place.

MR. WILLIAM C. CORKE, C.C., left last Friday on an extended visit to Norway, Sweden and Finland. His firm, Messrs. Corke, Sons and Co., are the agents in the United Kingdom for the Finnish Paper Mills Association for the sale of news print.

MR. C. R. SEDDON, president of the Papermakers' Association, was in London recently presiding over a meeting of the Executive Council of the Papermakers' Association.

CONGRATULATIONS were showered upon Mr. Seddon on his recovery from his recent indisposition.

MR. SEDDON has been re-elected a director of the Bury and District Chamber of Commerce, on the motion of Mr J. M. Arnot.

TWO GOOD THINGS FOR LITHO PRINTERS

"L. an B." (RODERZONE) ETCH for ZINC, ALUMINIUM 25/- per lb. Sample Ounce 2/6

Trade Notes.

WARRILOWS, LTD., Birmingham, by direction of Sir Arthur F. Whinney, K.B.E., the receiver and manager for the debenture holders, is offered for sale by private treaty as a going concern.

MR. CHAS. D. MACKAY, of 50, Gray's Inn-road, informs us that, in order to obviate any possibility of confusion as to names or otherwise, he will in future trade under the name and style of "The Chas. D. Mackay Co.," instead of as latterly under the name and style of "The J. L. Morrison (Sales) Co." All machines supplied by him will be known as "Niagara-Perfection" machines and the makers will be the J L. Morrison Company, Inc., of New York, U.S.A., whose wire stitching machines are well known.

MESSRS. CHAS. GRIFFIN AND CO., LTD., the well known publishers, have removed their registered office to 42, Drury-lane, W.C.2.

THE Sheffield Branch of the Typographical Association is appealing to local picture house proprietors to place their printing orders, as far as possible, with Sheffield firms. A great amount of printing matter on the hoardings, they state, is done outside Sheffield, despite the fact that in some cases Sheffield quotations are lower than those of the firms receiving the orders.

A TEAM from Messrs Chorley and Pickersgill (Electric Printing Works) won the Workshop Relay Race at the Leeds Athletic Club's evening sports.

THE annual wayzgoose of the staffs of the *Western Mail* and the Tudor Printing Works was held at Brecon, about 200 attending. Mr. Robert J. Webber, the joint managing director, presided at luncheon at the Wellington Hotel. Mr. H. Seymour Berry was unable to be present owing to a business engagement, but the party later in the day visited his house at Buckland and were received by him and were conducted round the grounds.

THE death occurred at a London nursing home, on Monday, of Mr. W. N. Shansfield, a well known Parliamentary journalist.

THE death has occurred at Llangollen, Denbighshire, in his 78th year, of Mr. R. R. Williams, the well-known Welsh printer and publisher. He succeeded his father, Mr. Wm. Williams, in one of the oldest publishing houses in the Principality.

MR. A. W. TOMLIN, London manager of the *Exeter Express and Echo Derby Daily Telegraph*, and *Scarborough Evening News*, died in the University College Hospital on Saturday after an operation.

THE death has occurred, after a prolonged illness, of Mr. T. Clay, manager of the *Wallasey Chronicle*. He was a prominent Freemason and a noted crack shot.

MR. WILLIAM LEITH, whose death has taken place at Sheffield, had been for nearly twenty years overseer in the printing department of Messrs. Charles Marsden and Sons, Holly-street, Sheffield.

MR. E. A. HUMPHREYS, well known as a member of the staff of the *Sporting Life and Sportsman*, died recently in London from heart failure, after an operation.

MISS LAURA BRADSHAW DURAND, who joined the staff of the *Toronto Globe* in 1894 and, later became literary editor, has died at Toronto.

PRESS EXHIBITIONS.—The following exhibitions for journalism, each of the value of £100 per annum and tenable for two years, have been awarded on the results of the examination held at the University of London this month: Hulton Exhibition, E. R. C. Lintott; *Liverpool Post and Echo* Exhibition, Major A. Stephens; *Daily Chronicle* Exhibition, P. M. Fowler; N.U.J. Exhibition, G. E. Powell; Yorkshire Newspaper Society's Exhibition, J. L. Garbutt.

SUNDAY'S issue of the *Observer* was the 7,000th.

WEMBLEY STAMPS.—On Friday morning an Austrian from Vienna visiting Wembley purchased 5,000 British Empire Exhibition commemorative stamps from the Wembley Post Office for a party who were with him. Another visitor, from Portugal, bought 800 penny and 300 threehalfpenny stamps.

THE Paris Press Club has decided, by 77 votes to 48, against the admission of women journalists to its premises.

Trade Union Matters.

AT a recent meeting of the Executive Council of the Typographical Association a letter was read from the Printing Machine Managers' Society asking if the Association would agree to a conference with the Society respecting the rates of wages in districts immediately outside London. It was decided that representatives of the T.A. should ascertain the intentions of the Society before making arrangements for a conference.

NEWSMEN'S HOLIDAYS.—The secretary of the Cardiff branch of the Typographical Association has reported to the Executive Council that, arising out of the recent agreement whereby newspaper worker members of the Association are to receive a half-day off per week or a night off per fortnight on condition that the time so taken shall be balanced among the remaining working hours, certain employers had contested the right of rotary machine men and readers to the holidays. The Executive Council has informed the branch that the concessions in the agreement apply to all T.A. members in morning and evening newspaper offices.

THE officials of the Typographical Association, in response to an appeal of the proprietor of a Cardiff printing office against the decision to remove his office from the "fair list" of the Association, and a request to be supplied with particulars of his breach of the rules, have informed him that as he had not employed a journeyman member for a period of six months he was not entitled to the apprentice he had employed.

THE members of the Hull and East Riding and Leeds branches of the National Union of Journalists last week visited Bridlington, and were entertained at luncheon by the Mayor. A cricket match between the *Daily Chronicle* (Leeds) staff and the Hull Press resulted in a draw.

MR. ARTHUR HOLYOAK (58), of Streatham-hill, S.W., the *Birmingham Daily Post*, and afterwards *The Times*, left £2,384 (net personalty £2,298).

Of all the Machinery exhibited at the recent Printers' Exhibition in London, none was more appreciated by Foreign Visitors than the display of the PICTORIAL MACHINERY LIMITED.

The "PRINTEX" Negative Printer and the "LITHOTEX" Step-and-Repeat Machine received the studied attention of visitors from abroad, and much admiration of these instruments was expressed, which was due to:—

(1) Their being thoroughly practical instruments.

(2) The fine workmanship, precision and adaptability of the instruments to the practical requirements of the worker.

Buyers from the most renowned centre of printing on the Continent, namely Leipzig, known the world over for its printing, purchased one of each of these instruments. Printers should remember that Leipzig houses send their representatives and experts to all parts of the world, in fact to any country where anything new or novel or practical is offered, and it is no small compliment paid to British Engineers and Inventors that PICTORIAL MACHINERY LIMITED did business with these expert buyers. The Machines are entirely British made and were chosen after inspection of all other appliances claiming to provide similar service.

The "LITHOTEX" Step-and-Repeat Machine, the acknowleged "King" of multi-negative makers, is extensively used and appreciated by all intelligent and practical craftsmen.

The "PRINTEX" Negative Printer, price £1,650 F.O.B. London, is a thoroughly practical Negative Printer with the acknowledged precision of the "LITHOTEX" Step-and-Repeat Machine, printing down in repetition to 1/1000th of an inch with great ease, and is operated entirely in daylight. The machine occupies less floor space than any other machine, prints plates in a vertical position, the position long proved to be the most satisfactory, and is most easy of manipulation.

The "LITHOTEX" Step-and-Repeat Machine is now improved beyond all recognition as when first produced. Is the most perfect multi-negative maker in the world, holds its own and has no competitor at all in line with it.

The two Machines form the most complete Unit for Photo-Mechanical work and Offset-Litho.

Four Models of the "LITHOTEX" Step-and-Repeat Machine are now available.

PICTORIAL MACHINERY LIMITED,
7, FARRINGDON ROAD, LONDON, E.C.1.

Necrology

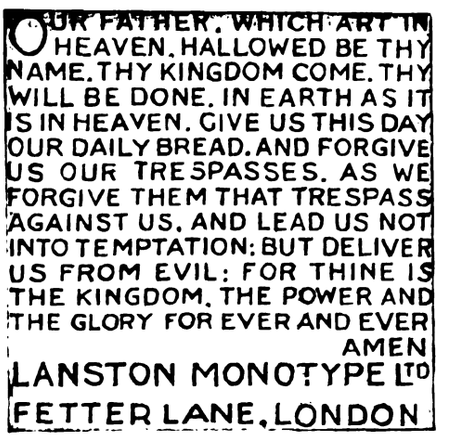
Fredk. Law Armstrong.

A particularly able administrator in the ranks of newspaper publishing and manufacturing stationery has passed away in the sudden and lamented death of Mr. Frederick Law Armstrong, general secretary of the Newspaper Society and secretary of the Employers' Federation of Envelope Makers and Manufacturing Stationers. Mr. Armstrong was a man of exceptional physique, but the great amount of energy which he infused into his work, particularly during recent years, apparently undermined his constitution. He suddenly developed an internal trouble in the third week of July, and was obliged to enter King's College Hospital, Denmark Hill, for the purposes of treatment. An operation was performed on July 20th, but in the early hours of Friday, July 24th, he passed away.

Born in London in 1874, Mr. Armstrong had only reached the prime of life when many years of useful activity might have been expected from him. There is little doubt, however, that he overtaxed a robust constitution.

By reason of his energy, enthusiasm and regard for detail, Mr. Armstrong would have made a mark for himself in any walk of life he had undertaken. In his early years he earned many distinctions in mathematics, and the gifts which were thus displayed served him in good stead in his business career. For a number of years he had charge of the export department of a leading firm of builders' merchants, and the knowledge of detail which he gained served him to very good purpose in later years. It was a happy circumstance when, in 1908, Mr. Armstrong made the acquaintance of Mr. A. W. Foster, B.A., the secretary of the Papermakers' Association. Both were keen exponents of the game of chess, and the acquaintance begun in the London Chess Club ripened into a deep friendship, which continued throughout Mr. Armstrong's life.

During the war Mr. Armstrong rendered valuable assistance to the Department of the Paper Controller, particularly in connection with shipping arrangements. Later, in 1918, when the Employers' Federation of Envelope Makers and Manufacturing Stationers was formed, with Mr. Foster as director, Mr. Armstrong was appointed the first secretary, a position he held up to his death. To these responsibilities he added those of general secretary of the Newspaper Society in October, 1921. In both capacities Mr. Armstrong displayed his great gifts. His grasp of labour problems was particularly sound, for he had the gift of taking pains to perfection. His tactfulness and patience served him equally well in negotiations conducted on behalf of the employers. He had a wonderful faculty for making friends, and he won the confidence even of the labour leaders with whom he was brought into contact. He was splendidly served by a wonderful memory for detail, and it is said of him that he never forget anything. Mr. Armstrong fashioned the Newspaper Society and the Employers' Federation of Envelope Makers and Manufacturing Stationers into very efficient machines, and he earned the admiration not only of his colleagues but of the various presidents under whom he served. For both organisations he did an enormous amount of work. He was ever ready to travel to any part of the country at a moment's notice to settle a dispute, and he spent long, laborious days in his office in Salisbury-square. Such energy and enthusiasm which he exercised in the discharge of his duties, regardless of his personal comfort, no doubt undermined what appeared to be an iron constitution, and he passed away in the full tide of success and health. In his attention to his work he apparently lost all his reserves of strength, and the serious operation which he had to undergo proved fatal. Mr. Armstrong had given up all recreations, with the exception of his chess and an occasional visit to the theatre. He continued to be one of the leading members of the Lud Eagle Chess Club, however, and played for Surrey in the County Championship in the early part of this year. He was not married and lived at Brixton with his mother, for whom he entertained a touching affection.



Simultaneously with the funeral at Nunhead on Tuesday a memorial service was held at St. Bride's Church, Fleet-street, conducted by the vicar (the Rev. A. Taylor). A large and representative gathering included: Lord Riddell, Sir James Owen, Mr. A. L. Woodhead (president of the Newspaper Society), Mr. W. Howard Hazell (president of the Federation of Master Printers), Mr. R. A. Austen Leigh, Mr. T. Owen Jacobsen, J.P. (president of the Employers Federation of Envelope Makers and Manufacturing Stationers), Mr. Leonard Spicer, Mr. W. W. Birrell, Mr. H. A. D. Wathen, Mr. A. W. Foster (secretary of the Papermakers' Association), Mr. R. E. Kemp, Mr. A. E. Goodwin, Mr. Wm. Whyte, Mr. P. D. Michael, Mr. T. G. Newland (general secretary of the National Union of Printing, Bookbinding, Machine Rulers and Paper Workers), Mr. Geo. Isaacs (Nat.S.O.P.A.), Mr. Oliver (Alex. Cowan and Sons, Ltd.), Mr. Percy Barringer (Stationers' Association), Mr. H. F. L. Wood, Mr. W. Webster Jones (Department of Overseas Trade), Mr. J. T. Steele, Mr. W. C. Powers, Mr. A. R. Iago, Mr. C. J. Thorne (secretary of the National Association of Wholesale Stationers and Paper Merchants, the British Paper Bag Federation and the British Paper Box Manufacturers Federation), Mr. Davey, Mr. R. G. Harvey Greenham, G. W. Davis (Linotype and Machinery Limited), A. E. Holmes, Rupert Kneale, J. D. French, E. Bouch and A. Willmott (Paper Trade Protection Association), etc.

Major E. J. Walker.

We regret to have to announce the death of Major E. J. Walker, one of the London representatives of Messrs. Lorilleux and Bolton, Ltd., who has passed away after a long illness, at the age of 62 years. Major Walker was formerly with Messrs. Ch. Lorilleux and Co., and latterly with Messrs. Lorilleux and Bolton, Ltd., his connection dating back for 40 years. He was a trusted and highly valued servant, and widely known in London printing trade circles. The interment took place on the 24th inst. at Hendon Park Cemetery.

Typecasting Extraordinary.

We recently referred to a novel example of type matrix cutting produced by the Lanston Monotype Corporation—viz., the Lord's Prayer on pica quad body, a matrix having been cut

to the size of 12 by 12 points to include the whole of the Lord's Prayer, together with the firm's name. We are able to show herewith a reproduction, greatly magnified, of the lettering cut in that small area. The size of the pica quad being this [ ], the minute size of the letters as actually cut can be imagined.

From the London Gazette.

PARTNERSHIP DISSOLVED.

A. W. Sealey, A. V. Lyons and H. A. Prosser, wholesale stationers and warehousemen, 20, Denmark-avenue, Bristol, under the style of Sealey, Lyons and Co.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

J. A. Cooper, 3, West Cliff-terrace, Pegwell-road, Ramsgate, in the county of Kent, journalist.

Technical Examination Successes.

City and Guilds of London Institute.

On inquiry of the City and Guilds of London Institute, Department of Technology, we learn that in the 1925 technological examinations, the number of candidates in typography, lithography and bookbinding were respectively 168, 14 and 11 in Great Britain and Ireland.

Typography, Lithography and Bookbinding.

In Grade I, Typography, 38 candidates offered themselves, of whom 24 passed and 14 failed. In Grade II of the same subject there were 26 candidates, 9 gaining 1st's, 11 2nd's, and 6 failing. In the Final, of 95 candidates 21 gained 1st's, 49 2nd's, and 25 failed. Of 9 students sitting for the Full Technological Certificate, 3 passed and 6 failed.

In Grade I, Lithography, there were 4 candidates, and all failed. In Grade II, of 4 candidates sitting, 1 gained a 1st, 2 2nd's, and 1 failed. In the Final there were 6 candidates, of whom 2 gained 2nd's and 4 failed.

In Grade 1, Bookbinding, 4 candidates applied, 1 gaining a 1st, 1 a 2nd, and 2 failing. In the Final there were 7 candidates, of whom 2 gained 1st's, 2 2nd's, and 3 failed.

In India and Trinidad there were 16 candidates in Typography. In Grade I, 6 out of 8 secured passes, 2 failing. In Grade II, of 8 candidates 3 gained 1st's and 5 2nd's. The one candidate in Lithography gained a pass in Grade I. The one candidate in Bookbinding gained a 1st in Grade I. In a special examination for Trinidad apprentices in Bookbinding there were 9 candidates, of whom 8 gained 1st's and 1 a 2nd.

The Prize-Winners.

The prize-winners in the subjects above mentioned were:—

Leslie Arthur Grover (Walthamstow, Technical Institute): Typography (press and machine work), 1st prize, Final, Silver Medal.

William James Burrows (Harrow, District Technical School): Typography (compositors' work), 1st prize, Final, Silver Medal.

Henry Whitley Mitchell (Liverpool, Central Technical School): Typography (compositors' work), 2nd prize, Final, Silver Medal.

James Shand (London, the Polytechnic, Regent-street): Typography (press and machine work), 2nd prize, Final, Silver Medal.

John Christopher Dempsey (Dublin, City of Dublin Municipal Technical Schools): Typography (compositors' work), 1st prize, Grade II, Bronze Medal.

Dan Binns (Skipton, School of Art): Bookbinding (forwarding), 1st prize, Final, £2 (Skinners) and Silver Medal.

R.S.A. COMPETITION.—A selection of the designs received in the competition of industrial designs for prizes offered by the Royal Society of Arts will be exhibited in the North Court of the Victoria and Albert Museum, South Kensington, from August 1st to August 31st next, on Mondays, Tuesdays, Wednesdays and Fridays from 10 a.m. to 5 p.m., on Thursdays and Saturdays from 10 a.m. to 9 p.m., and on Sundays from 2.30 to 6 p.m. The exhibition will be open free of charge, no tickets being required, and consists of designs in various arts and crafts including printing and book production. It also includes designs for posters, the decoration of chocolate boxes, etc., sent in response to the offer of scholarships and prizes by Messrs. Cadbury Bros., Messrs. J. S. Fry and Sons, Messrs. Lever Bros., Messrs. Nestlé and Messrs. A. and F. Pears, in connection with the same competition, and for designs for a Christmas number of the *Graphic* for a prize offered by the proprietors of that journal.

THE high rates of exchange of the pound sterling and Swedish crown make it almost impossible for French dealers to buy printing paper abroad and importers hesitate at making large contracts, thus menacing the publishers of the leading dailies with a paper famine. Consequently prices continue to rise.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

BUSINESS continues to be quiet and there is no change in the outlook. With the holiday season in full swing, it is too much to expect that any great endeavour will be made to force the pace. In fact, it is more than doubtful if the situation can in any way be materially improved by resolution, for the causes of the depression are deep seated and fundamental. Except where safeguarded by some form of protection or monopoly, as in the case of dyes, dying and cotton thread, beer or tobacco making, calico printing and the like, the more important industries of the country are languishing for lack of home support and exposure to competition from countries in which lower wages are being paid and longer hours worked. Financially we are a stronger and sounder country than the majority of those that compete with us for markets to which we once held the key, and doubtless our sound economic policy will eventually enable us to regain all our lost trade and more. Meantime, however, this generation is bearing a heavy burden and much of the joy is going out of business.

* * *

AT long last something which appears to have a definite face value has been accomplished in paper standardisation. The subject has been before the trade for many years, and this journal has consistently been putting forward the case for adoption of a certain measure of standardisation which could not fail to benefit makers, merchants and printers. We note that the present arrangement has been agreed between the National Association of Wholesale Stationers and Paper Merchants and the Master Printers' Federation; but it is to be concluded that the Paper-makers' Association is in agreement, otherwise the loaf is not a whole one. As to the new standards, we are to have the mille, *i.e.*, the thousand sheet ream. This does away with a great deal of mental and figurative arithmetic, It will save printers time and often enough some of their money. It will avoid all those complications and wastages consequent upon a ream of paper containing anything between 472 and 516 sheets.

* * *

IN addition to a stable content basis, standard sizes have been adopted, the chief merit of which will be the avoidance of error in estimating and buying. Very little has been done to simplify the range of sizes by elimination, and a good opportunity to introduce a large measure of economy has been allowed to pass by. Obviously, printers are thankful to get some sort of a start with their scheme. The close variations between writings and printings have been preserved, and to discriminate, the printer is presented with some prefixes. Evidently the paper merchant is nervous over the alteration of sizes, and we can never imagine him agreeing to drop names in favour of inch specifications. One of the most sensible clauses in the agreement is that which provides for a clearly-marked specification label. Here is a very obvious necessity, which many papermakers and wholesale merchants have hitherto disregarded. Finally, there is something to be gained from the description of board substances in thousandths of an inch. There should be no option in this matter, and lbs. per 100 should accompany the thickness factor rather than be left as an alternative. Altogether, the new scheme is a good stride in the direction of uniformity and simplification. It will save time and money when we all get accustomed to its working.

HAND-MADE PAPER DEPRESSION.—A period of mild depression has settled on the hand-made paper mills, where short time is being worked in certain directions, says *The Times* (Trade Supplement). Several vats have been idle for a prolonged period, and the poverty of the demand, particularly for ledger papers, is giving rise to serious concern. It is disconcerting to find publishers having resort to imported hand made printing papers for their *de luxe* and subscription editions. There are English hand-made mills capable of giving the publishers all they desire in the way of character, quality and price.

Paper Box Trade Board.

Inquiry into Objections to New Definition.

The adjourned inquiry into the objections to the draft order, varying the description of the paper box trade under the Trade Boards Acts, 1909 and 1918, was opened at 5, Old Palace-yard, Westminster, on July 20th, by Mr. Chas. E. Dyer, K.C., the Commissioner appointed to hold the inquiry.

Mr. William Culross represented the employers in the paper box trade, while Mr. C. J. Thorne, general secretary of the Paper Box Makers' Federation, also attended. Representing the workers in the paper box trade were Mr. J. J. Mallin and Mr. W. H. Dyer, of the National Union of Printing and Paper Workers.

The Ministry of Labour had issued a notice of its intention to alter the description of the paper box trade, as specified in the Acts, and certain objections were lodged against these proposals, the object being to seek the exclusion of certain factories which undertook the manufacture of paper boxes and cartons as a subsidiary process.

The Commissioner mentioned that the first objection he had received was one from the National Leather Goods and Saddlery Manufacturers' Association, and it was in consequence of that objection that the inquiry was set on foot. Oddly enough, however, after the inquiry had been decided upon and measures taken to investigate the matter, the secretary of the National Leather Goods Association withdrew the objection.

The letter from the secretary of this Association, while stating that the Association did not propose to be represented at the public inquiry, desired to point out that the members objected to the application of the Paper Box Trade Board to the making of articles from materials other than those of paper, chip, cardboard, pulp board, or other similar box boards. It should be clearly indicated, said the letter, that the making of suit, attache and similar cases from other materials than those specified should be excluded from the scope of the Board. It was added that the hard fibre box boards made by the members of the Association in the manufacture of cases were not boards which were ordinarily worked by paper box machinery, and, therefore, the type of boards which were ordinarily used by the trade—not being worked by the machinery found in paper box establishments—should not be considered to be box boards.

The Commissioner thereupon took evidence with regard to an objection lodged on behalf of the soap and candle trade.

Mr. Ross Mitchell pointed out that the Federation of Soap and Candle Makers represented 43 firms, the large majority of soap makers, and of these only five firms made any containers at all. Some of these five only made one particular class of container, but they bought millions of other cartons from the paper box trade outside. Another point made by the speaker was that soap makers were not box makers, and that box making was an ancillary of the soap trade. He went on to mention that in the soap industry they had a trade board for wages for one part of the factory, while in another part, or even in the same section, they had rates agreed to by the Joint Industrial Council of the trade. Inclusion, therefore, in the paper box trade would complicate matters still further; and as they had their own effective machinery for the regulation of wages and conditions, they asked that the soap trade might be excluded from the draft order.

Replying to the Commissioner, Mr. Ross Mitchell said that the five soap firms making paper boxes were Lever Brothers, Joseph Watson and Son, Crosfields, John Knight and Price's (Patent) Candle Co.

A representative on behalf of Messrs. Gossages mentioned that his particular firm obtained their containers in the open market, although they occasionally got them from a firm whose particular business was the manufacture of soap. The majority of the members of the Federation purchased their cartons in the open market.

The Court then went into an objection lodged by Messrs. Guest, Keen and Nettlefolds, Ltd. (iron and steel manufacturers).

Mr. W. Ramsey, of the Birmingham and District Engineering Employers' Association, speaking on behalf of the objectors, said the proposed order, as it was understood, would alter the status of the company, which was outside the scope of the Trade Boards Act. He contended that the making of boxes, without regard to the conditions governing their disposal, could not in any sense be regarded as the paper box trade. The company, therefore, asked that the terms of the appendix should be altered, and that it should clearly define what was the paper box trade, or alternatively, a specific exclusion should be embodied, governing the case of the company. The Minister had already excluded the match-making industry, where there were the same reasons for exclusion as in the case of Messrs. Guest and Co. The boxes they manufactured were not for sale or exchange, and were incidental in a very minor degree to their main occupation of screw manufacturers.

Mr. Culross asked, if the company were excluded from the order, whether the box makers' wages would be reduced to the level of the screw makers?

Mr. Ramsey thought that such a question should not be put to him.

Mr. Culross urged that if a house chose to make its own boxes it must make them under the same conditions as those made by ordinary trade box makers. If firms who made their own boxes were excluded from the order, they must pay the rates of wages laid down by the Board which had the direction of the box making trade.

The hearing was adjourned until Sept. 24th.

THE ability to visualise and interpret the needs of to-morrow has lifted small enterprises to industries, kingdoms to empires. It has produced inventions; built factories; created markets; extended commerce. It has made the luxuries of yester-year the necessities of to-day.

When Benjamin Winstone started making printing inks in the little Wine Office Court laboratory 'way back in '48—seventy-seven years ago—printing had little economic value; it was not the vital adjunct to sales as the modern business man knows it. But Benjamin Winstone had Vision—faith in his craft. He saw a need, and built the whole structure of his organisation around meeting that need by supplying better and still better printing inks.

To-day the name "Winstone" on any product is the hall-mark of sound value and quality.

PROGRESS SERIES: No. 1.

This series is descriptive of 77 years' progress made by the House of Winstone in the manufacture of Printing Inks, Rollers and Specialities. This advertisement will be followed by others featuring Enterprise, Evolution, Stability, Achievement and Service.

How Labels and Seals Help Sales.

By WILLIAM H. SESSIONS (Ebor Press, York).

The first requirement of a label is to tell what is inside; although this use is obvious, yet just as we sometimes try to start our car without putting the switch on, so this use always wants to be remembered.

The next requirement of a label is to tell how to use what is inside. Again an obvious use, but one which needs emphasising more than the first, because no desire for an attractive label should ever come in front of the need to render every possible service to the man or woman who has paid us the compliment of buying our goods. This service brings its own reward. The manufacturer who tries to make it easy for his goods to be used in the best possible way and who suggests the various uses to which they can be put, is not only serving the user, but is building up the reputation of his goods; this brings in fresh purchasers and also extends the use of his goods amongst those who already buy. So that whilst, in order to secure repeat orders, distinction, or rather distinctiveness, must always be present in a label, yet it must be remembered that a label can do more than secure sales and repeat orders; it can assist the use of the goods.

Labels that Sell Goods.

Modern selling has two outlooks: First, to secure increased sales from those who use the article, and, second, to extend the number of its users. It is, after all, not sales we want to keep our factories going, but the use of the article. The modern business man does not want the customer who buys and wraps up in a napkin, in other words, who uses his goods sparingly or on State occasions. In many goods, more especially those used for cooking or medicine, suggestions of various uses of the goods on the label or on another label at the back are always well worth while, even at some loss of artistic qualities in the label. Indeed, the first question we need to put in regard to our labels is: Do they serve our customers as much as they can?

I suggest there are buyers of labels, even large buyers, who would find the time exceedingly well spent, from the point of view of increased sales, if they would sit down before a set of every article they make up, take each separately, and consider its label simply and solely from this point of view of service. Better still! remember the couplet:

"Of all the plagues that heaven can send,
Pray, Lord, deliver us from the candid friend,"

and draw one of these plagues into the investigation, in the person of an independent friend, who will look at the matter purely from the point of view of the purchaser.

The next use and the most important from the point of view of this Convention is directly to help the sales of the goods. No label, however good, will build permanent sales for a bad article, but if what is sent out is worth buying there is no doubt that the better the label the better the sales.

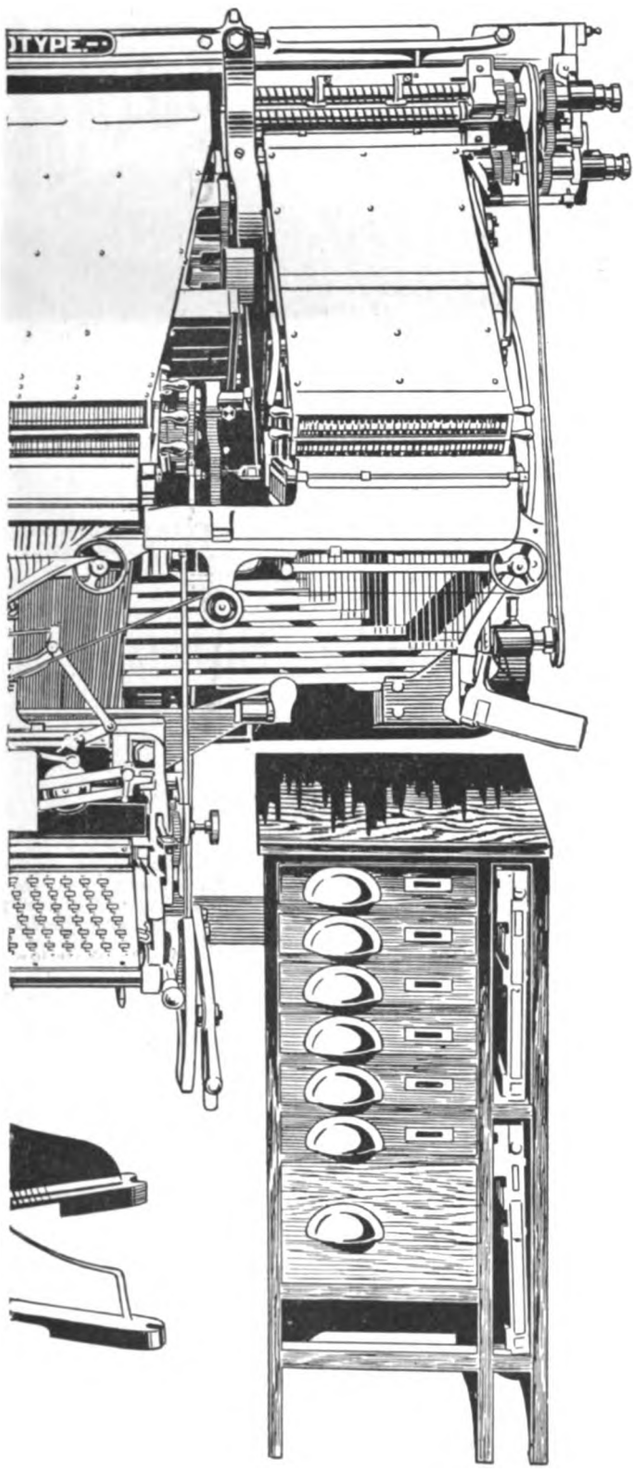
Whilst the connoisseur, who makes a careful investigation of every competing article, selects the best and then sticks to it, may not be much influenced by the label, after all, he represents but a fraction of the buying public of any article; for the rest—and that is for the vast bulk of those who buy—three things count strongly: Reputation, advertising and attractiveness of make-up. The order in which I have given them is the order of their importance to the business man. Reputation is founded on the real merit of the goods themselves, and is of the greatest value in securing repeat orders. Advertising creates the desire to buy. Yet, strongly as I urge the importance of these two, and place them first, we have to remember that when the buyer makes his choice the one thing which is before him *at that moment* is the article itself; thus the make-up, with its attractive label and neat seal, cannot be left out, and is indeed all-important to back up the other two. It should put the finishing touch to the good work in the factory and in the selling and advertising departments; but, if neglected, much of that good work may be thrown away.

What is a Good Label?

What constitutes a good label or seal? Here again, I must give an obvious answer: The one which appeals most strongly to the buyers of the goods. Let me qualify that however into: The one which appeals most strongly to those buyers of the goods who are most influenced by the outside appearance. The connoisseur, as I have said, is hardly worth while considering in the matter of the label; its appeal will be to the general mass of buyers. Thus, the designer must not produce just a good design, however artistic; he must have in mind always the mass purchasers of the goods and should design to appeal to that mass.

Strange although it may seem at first sight, a label design does not want to be too up-to-date, and this is especially true of a trade mark, even a trade mark consisting of a name. Words new to the language take time to settle down, and the smart business man who took advantage of the coming of the motor car to seize on the word "automobile" for his trade mark will, even by this, have to sell his goods to a generation who hardly know what an automobile is.

A designed trade mark is a drawing which cannot legally be altered, unless an application is made to and granted by the Registrar and his fees paid—so the importance of my remark about the danger of being up-to-date will be realised, especially in regard to trade marks. Whatever difficulty the trader who registered the word "automobile" would have, a man would be in a still greater fix to-day, if he had long ago registered the design of an early automobile, that pioneer of the present motor, for which so frequently the passengers or, if they were lucky, some farm horse had to be the "auto" to make it "mobile" enough to reach home. Picture what such a design would look like to-day. I rode in the third one registered in London. I cannot remember all its details, but I know I faced the driver. True my back kept the wind off him a bit, for there was no windscreen, but my position in his line of vision became exciting for both me and the driver when we came on some cows round a corner. He had to dodge my head in order to see how to dodge the cows, and when we both dodged the same way it was awkward. Fortunately speeds were slow, fortunate for your chance of lumbago and a stiff neck as well as for safety. It will be seen what I mean about the danger of being too up-to-date, when you remember that although it might be possible to keep pace with motor design by altering a label, this would not be possible on a trade mark, which, legally, cannot be changed.



The classical or antique is safe; the up-to-date may soon become merely the old-fashioned. In ten years' time the garb of Johnnie Walker will still be charming, the Oxford trousers just silly. "Puffing Billy" will always be interesting; an engine of twenty years ago will suggest that the firm using it is behind the times If you must have a lady in the design, put her in the garb of ancient Greece, not in the rapidly-changing fashions of the moment.

The Customer's Point of View.

The customer's point of view must be kept always in mind in designing a label. Think for a moment of the drab streets in the working-class district of a crowded town, all unconsciously the need for brightness and colour is present in the mind

Address delivered at the Printing Session of the recent British Advertising Convention.

This Side Section added to a Model 4 or a Model 6 Linotype considerably extends the scope of the machine.

By merely moving a key lever the operator is able immediately to switch over from the main magazines to these side magazines, from which he can set (direct from the standard keyboard) the large display characters he requires up to full 36-point upper and lower-case.

This is only one of the many special features of the Linotype.

of the purchaser. If we sell in such districts, let us give them some brightness and vivid colour in the label. It will fill a need, and in doing so will help sales.

If, on the other hand, our goods are for the rich, we must think of a lady going out of her beautiful home, in which are bowls of flowers, dainty hangings and pictures. If she wants more colour, she has it as she sits in her garden, gay with flowers. She has round her all the colour she needs, so if the article is for her own use then the make-up must be the good designing and quiet tasteful colours which have a natural appeal for her.

To turn out a really good label, or seal, there are two classes of customers I find the most helpful: The man who understands advertising (and that means who understands the buyer's attitude) and who has some artistic appreciation; and the man who lets me know something about his buyers, and who tells me it is my job to design a selling label for them, and leaves me to it. The time when it is the most difficult to design a successful label or seal is when the customer understands art but has a poor appreciation of advertising values. If you think over this appreciation and criticism of three classes of my customers, you will the better grasp the point I desire to make of the problems underlying a successful dress for the goods.

I should have liked, had there been more time at my disposal, to illustrate the buyer's outlook by taking examples, for I am satisfied that this buyer's outlook does not enter sufficiently into the designs of many labels, etc., to-day. You will all agree that a bold design would be excellent on any goods which do not appear, say, on the dining table or in my lady's chamber, but such a design would be hopelessly out of place on articles which do so appear. Yet, in spite of your agreement, you would not have to look into many shop windows before you found examples where this one point had not been sufficiently taken into account. There is a market open, for example, for a good breakfast food which dresses itself up in a more pleasing way for the table than any which I know. And why do not the sellers of lime juice and lemon squash take a lesson from the beauty cream people and give us a bottle and get-up more in keeping with a nice table?

I trust what I have said has convinced you, if you were not convinced already, that it is not the design of the label, but the appeal of that design to customers which is all-important, for a really good design may make a poor label to sell goods.

A Test of True Art.

Perhaps I can show this best from Ruskin's illustration of the carving of two lions. One sculptor, and the better sculptor of the two in technical skill, produced a lion, fine as a piece of sculpture, but with no strength in its limbs. The other, a less skilful workman, had a lion of the forest, king of beasts, ever in mind; and he wrought a lion with power to strike, with its deadly strength living even in the carved stone. The master-mind of a Ruskin passed over the greater technical skill of the one and pointed out to us the truer artist in the other. It is many years since I came across the criticism, yet it has remained with me as a guiding thought in my business life; for, running through what Ruskin wrote about these lions is the great and all-important idea of the ultimate purpose, and this must be behind, not only all good art, but also behind every good thing which is produced for use or enjoyment.

By all means let us attain all the technical perfection in our various crafts and businesses, but that is not enough; our lions, whatever they may be—nails or labels, suspension bridges or speeches in Parliament—must not have behind them just surface cleverness or mere technical skill; *they must work*. The nail must be able to be easily driven home, the label must render service and sell the goods, the suspension bridge must carry its loads and stand the shocks of all winds and weather, the great Parliamentary speech must not just be brilliant debating, confounding opponents, but must be a real contribution to the service of the nation.

I am a firm believer in every manufacturer, even, no! not "even," *especially* the man who makes the everyday things of life, making them as beautiful as ever he can. We could all do far, far more in this respect, but let us always remember the ultimate purpose of our goods. The artistic design of a cup which leaves a difficult angle for the tired housewife or servant to keep clean is not true art. So, too, with our labels, the merely artistic, which has no grip, no use, or selling power, is but a drone in the hive of industry; and, what is more, because of its failure, it is not even artistic in the true sense of the word.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Profit-Sharing at Torquay.

At the annual meeting last week of the Goss Albion Printing Works, Torquay, the directors attributed continued prosperity in some measure to the principle of profit sharing, which had obtained since the beginning, and in some respects was unique, because the dividend had direct relationship to the rate of wage paid. Based on the plan of 5 per cent. dividend equalling a wage of 30s., the dividend may be increased one per cent. for every 10s. increase in wages, and should a greater dividend be paid than this rate, then the corresponding sum must be paid to the staff in their share of the profit. This will now be done for the third year in succession, and the directors consider that this affords one solution at least of the great labour difficulty that is facing the world to day.

Paper Towels.—A requisition for the supply of paper towels having been submitted, the Stores Sub-Committee of the Kent Education Committee recommended that "this type of towel should not be stocked or supplied unless after consideration of any special application received arising from exceptional circumstances." The chairman (Sir Mark Collet) informed the Committee that he had experimented with these towels, and it was not a success. The sub committee's recommendation was adopted.

Government Contracts.

Contracts were placed with the following firms during June:—

H.M. Stationery Office.

Printing, Ruling, Binding, etc.

Group 187 (1925), Inland Revenue Specified Items (L. and M.)—Section A (Whole Supply): Illustrations, Ltd., Manchester; Section B: Crypt House Press, Ltd., Gloucester.

Group 185 (1925), Post Office Registered Letter Labels.—Harrison and Sons, Ltd., London, W.C.

Group 186 (1925), Index Cards: Charles and Son, Ltd., London, S.E.

Northern Area, Group 19 (1925), Inland Revenue Specified Items.—C. Tinling and Co, Ltd., Prescot.

25,000 Covers for Army Book 64.—Adams and Harrison, Ltd., London, E.C.

300,000 Rope Manilla Labels.—Cooper, Dennison and Walkden, Ltd, London, E.C.

7,500 Books D. 193.—J. Dickinson and Co., Ltd., Hemel Hempstead.

3,000,000 Telegram Forms; 2,111,725 Form 52c; 2,115,250 Quarto headed notepaper.—H.M. Stationery Office Press, Harrow.

Binding 750 Admission Registers.—Lamson Paragon Supply, Ltd., London, E.

3,000 Books, Register of Births; 25,000 Books, T.E. 1030.—McCorquodale and Co., Ltd., Wolverton.

1,841,000 Quarto headed notepaper.—Metcalfe and Cooper, Ltd., London, E.C.

700 Books, O.A.P. No. 3.—Roberts and Leete, London, S.E.

2,380 Collectors; Duplicate Books; 25,000 Forms 53 (New); 85,000 Forms 54 (New).—T. Shackleton and Co., Ltd., Manchester.

25,000 Army Forms B. 108.—J. Speller and Co., London, S.W.

4,000 Books A.B. 26.—Thomas and Sons, Ltd., London, E.C.

45,000 Covers for Army Book 64; 2,900 Books Ledger Summaries; 750 Savings Bank Ledgers (6 accounts per page); 1,950 Savings Bank Ledgers (4 accounts per page); 7,000 Books D. 192.—Waterlow and Sons, Ltd., London, E.C.

25,000 Army Forms B. 108.—Waterlow and Sons, Ltd., Dunstable.

400 Books T.P. 1063.—Willmott and Sons, London, E.C.

20,000,000 Form A/cs. 455.—J. Worrall, Ltd., Oldham.

Paper of Various Descriptions.—J. Baldwin and Sons, Ltd., King's Norton; J. Brown and Co, Ltd., Penicuik; Caldwell's Paper Mill Co., Ltd., Inverkeithing; Carrongrove Paper Co., Ltd., Denny; R. Craig and Sons, Ltd., Airdrie; J. Cropper and Co., Ltd., Kendal; J. Dickinson and Co., Ltd., Watford and Hemel Hempstead; Disley Paper Mill Co., Ltd., Disley; P. Garnett and Son, Ltd., Otley; Golden Valley Paper Mills, Bitton; London Paper Mills Co, Ltd., Dartford; C. Marsden and Sons, Ltd. (Receiver for), Tamworth; National Paper and Pulp Co., Ltd., Wycombe; New Northfleet Paper Mills, Ltd., Northfleet; Olive and Partington, Ltd., Manchester; Packing Materials Association, Ltd., Manchester; Ryburndale Paper Mills Co., Ltd., Ripponden; Sanitas Co., Ltd., London, E.; R. Sommerville and Co., Ltd., Creech St. Michael; Spicers, Ltd., London, S.E.; Star Paper Mills Co, Ltd., Feniscowles; Waterside Paper Mill Co., Ltd., Darwen; Wiggins, Teape and A. Pirie (Sales), Ltd., Hele, Bucksburn and Chorley.

Waxed Stencil Paper.—Ellams Duplicator Co., Ltd., Bushey.

Post Office.

Paper, Printing.—C. Townsend Hook and Co., Ltd., Snodland, Kent.

Paper, Wheatstone.—Boyden and Smith, Ltd., London, N.W.

Crown Agents.

Stationery, etc.—Waterlow and Sons, Ltd., London, E.C.

The annual report of the Bury and District Chamber of Commerce states:—"The paper-making industry throughout the country has passed through a long period of depression, and certain branches are still feeling severely the keenness of foreign competition. But there is evidence of a definite progress towards more normal and settled conditions in trade and industry, the revival of which is so anxiously awaited."

Trade Notes.

The 80 years-old firm of Messrs. R. Ward and Sons, printers, of High Bridge-street, Newcastle-on-Tyne, has acquired, as an extension of Ward's Buildings, the extensive premises which were formerly the *North Mail* offices.

The Leeds works of Messrs Beck and Inchbold, printers, Basinghall-street, is closed from Thursday, July 30th, to Monday, August 10th.

The Albion Sewing Cotton Co., Ltd., of Tottenham Hale, London, N.17, closed their offices and works on Friday evening for the annual holidays, to re-open on Monday, August 10th.

The death has occurred after a brief illness at the age of 62 years of Mr. Feargus Delittle, a director of Messrs. Delittle, Fenwick and Co., Ltd, printers, Railway street, York. His connection with the firm dated from its foundation in 1874 when his father, Mr. F. R. Delittle, set up in the printing business for himself with his two sons, William and Feargus.

Mr. F. C. Cross, whose death is announced, had been a member of the staff of the Oxford University Press for several years.

The death occurred on Thursday, in his 69th year, of Mr. Edmund T. Pearson, a well-known north-country journalist, whose career included service on the *Sheffield Independent*, the *Preston Guardian*, the *Southport Guardian*, the *Liverpool Mercury*, and the *Liverpool Daily Post*. Mr. Pearson was an ex-chairman of the Liverpool branch of the National Union of Journalists, and a member of the Liverpool Committee of the Press Fund. He was a Past Master of a Preston Masonic Craft Lodge, also an active member of Royal Arch Chapter, and a Masonic Mark Lodge.

Rev. J. M. E. Ross, who in 1923 succeeded the late Sir W. Robertson Nicoll as editor of the *British Weekly*, died on Monday at Chiavenna, Italy, from heart failure resulting from old tubercular trouble.

The death occurred last week at the age of 81, of Mr. William Hampson, who was formerly proprietor of the *Radcliffe Observer*, but who for 49 years had been at the Whittingham Asylum.

The late Mr. Albert Knowles Johnson (59), of Marple, Cheshire, printer, a director of Messrs. Richard Johnson and Sons, Ltd., left £10,995 (net personalty, £9,675).

The *Daily Telegraph* film, "Behind the Scenes of a Great Newspaper," which depicts the production of a modern daily paper in all its stages, is being included this week in the programme of 14 important metropolitan and provincial cinemas.

Poster Competition.—In response to the Brighton Corporation's offer of a 50-guinea prize for the best poster advertising Brighton, 295 posters have been sent in. Of these, 173 are now on view in the Art Gallery. Forty-four came from London, 22 from Brighton, and the rest from all parts of Great Britain, with one fine example from Paris. A ballot is being taken to ascertain which in the public opinion is the best, but the Publicity Committee will make the final selection.

Control of Press.—The House of Lords on Thursday discussed the Judicial Proceedings (Regulation of Reports) Bill on the Committee stage. The measure, it will be recalled, was introduced by Lord Darling, and regulates newspaper reports of judicial proceedings, and imposes penalties for publication of indecent details. The House accepted a proposal by Lord Merrivale, which provided that no prosecution for an offence under the Bill should be commenced by any person without the sanction of the Attorney-General. The Bill passed the Committee stage.

Eburite Paper Co.'s New Works.—The Eburite Paper Co., Ltd., are in process of moving to their new works at Park Royal. Greatly improved facilities are afforded the company in carrying on their business in corrugated boxes, corrugated greaseproof and corrugated papers generally, also their well known brands of crepe paper. The new establishment will provide one of the largest paper-box works on one floor in this country, the area of the floor being 100,000 square feet, with the advantage of a railway siding into the works.

The employees of the greater part of the printing establishments throughout Belgium, who went on strike on July 20th, had not yet returned to work at the beginning of this week, the efforts at conciliation undertaken by the Minister of Industry and Labour having so far proved unsuccessful.

The Paris *Journal Officiel* publishes the law passed by the Senate and Chamber, and signed by the President of the Republic and by the Minister of Labour on July 25th, providing for one day's rest a week for the editorial staffs of newspapers. Newspapers in France are published on every day of the week.

A delegation from the United Kingdom branch of the Empire Parliamentary Association will visit Newfoundland this month. The delegates will visit the paper mills at Grand Falls, and they will attend the official opening of the new paper mills at Corner Brook on August 24th. Throughout their visit the delegates will be the guests of the Newfoundland branch of the Empire Parliamentary Association.

Trade Union Matters.

The Recent Newspaper Agreement.—The secretary of the Manchester branch of the Typographical Association has asked the Executive Council if the recent agreement on newspaper rates and hours applied to members employed on weekly newspapers in jobbing offices. Some of the members concerned were in receipt of the 6s. 6d. bonus. The secretary has been informed that the agreement does not apply to weekly newspapers.

L.S.C. Ballot Results.—The ballot held by the London Society of Compositors on the proposal to reduce the present levy of 1s. to 6d. and to add 3d. to the general fund and 3d. to the supplementary benefit fund, with a permanent addition of 6d. to the weekly subscription, has been carried by 6,831 against 1,353. The proposal to increase the subscriptions of the members fully employed on the "Periodical" scale by 3d. has been carried by 6,930 against 1,200; and the proposal to add 6d. to the subscription of members on the new scheme of superannuation has been carried by 7,036 against 1,090.

W. H. Smith and Son Dinner.

King's Prize-Winner Honoured.

The partners of Messrs. W. H. Smith and Son gave a dinner at the Holborn Restaurant on Tuesday of last week to Mr. A. Smith, the King's prize-winner in the rifle-shooting competition at Bisley. A feature of the occasion was that copies of the targets showing the "bulls" and other shots made by Mr. Smith in the final stage of the competition were placed on the menu.

Major Etches, the secretary of the National Rifle Association, in congratulating Mr. Smith on behalf of the National Rifle Associatio and the Society of Miniature Rifle Clubs, referred to the scenes at the close of the Bisley meeting, and said he had never congratulated a more self-possessed or more modest young man. They hoped he would win the trophy for a second time.

Dealing with the £6,000 overdraft of the National Rifle Association, Major Etches announced that Viscount Hambleden, head of W. H. Smith and Son, had sent £100 towards their special appeal.

During the evening Mr. Smith was presented with a pair of binoculars by the partners of the firm, and a silver cup by members of the W. H. S. Rifle Club and Athletic Association.

From Messrs. R. W. Crabtree and Sons, Ltd., there reach us two neat booklets that should be of great interest to newspaper printers. One illustrates and draws attention to "Crabtree" high speed rotary presses, magazine machines, etc., and the other contains illustrations and detailed particulars of the wide variety of stereotyping plant and late news devices manufactured by this well-known firm of printers' engineers. Messrs. Crabtree can point to an ever-growing and impressive list of users of their apparatus, their clients including some of the largest and most up-to-date newspaper offices in London, Manchester, Leeds, Glasgow, Edinburgh and other large towns at home and overseas.

Personal.

Mr. W. A. Smart, overseer of the machine department of Messrs. C. Tinling and Co., Ltd., printers, Liverpool, has been presented by the directors and staff with an illuminated address and a cheque on his retirement after 44 years' service.

Mr. Thomas James Gray, the overseer of the composing-room of the *Yorkshire Evening Post*, was married at the Louth Register Office on Saturday to Miss Lucy Gray.

Mr. G. D. Stafford, who for the past 21 years has been overseer at Messrs. R. Robinson and Co., Ltd.'s printing works, Newcastle on-Tyne (with whom he has been 40 years), was last Saturday the recipient of a presentation from the staff, at the hands of Mr. J. Dixon (ex president of the Newcastle branch, Typographical Association). Mr. J. Darby (Father of the Chapel) presided.

Mr. F. W. Toynbee, a member of the Executive Council of the Typographical Association, has been adopted as prospective Labour candidate for the Tonbridge Division of Kent.

Miss Roeback, chief woman clerk, and Miss Glover, chief retail assistant, of Messrs. William Grieve and Son, printers and stationers, Dumfries, have each been presented with a silver tea service on the occasion of their marriages. The presentations were made by Mr. William Grieve.

Mr. J. Whitehurst Wild, editor of the *Bury Times* and *Radcliffe Times*, on Wednesday of last week entertained to dinner a few of his personal friends at the Derby Hotel, Bury.

Those present were for the most part representatives of the official life of the town, and included members of his staff and of the composing staff of the two papers, also the heads of the departments in *Bury Times* Printing and Publishing Co.

Mr. Ernest Phillips, the editor of the *Doncaster Chronicle*, has been presented by the staff with a barometer on the occasion of his marriage, which took place at Leeds.

Mr. W. H. Fountain, of the staff of the *Norfolk News*, has been presented with various gifts by the staff on leaving to join the Leeds staff of the *Daily Chronicle*.

Mr. Hugh Anderson has resigned his position as managing director of the Bury Paper Making Co., Ltd., Gigg Mills, Bury.

Major G. Lloyd George, M.P., played for the United Newspapers (London) cricket team when they paid a visit to Sittingbourne recently to play the Sittingbourne Paper Mills team. The papermakers ran up the excellent score of 196 for six wickets and dismissed their opponents for 112. Major Lloyd George was the second highest scorer for the visitors with 24.

Mr. Philip T. Dodge, who is well-known in paper and printing circles, both here and in America, has resigned his position as director of the International Paper Co. and as chairman of the board. Mr. Dodge, who has spent much time in England, intends to devote his time largely to the interests of the Mergenthaler Linotype Co., of which he is president.

Amongst the many expressions of regret and esteem called forth by the news of the death of Mr. F. L. Armstrong, general secretary of the Newspaper Society, is one which the president of the Newspaper Society has received from the National Confederation of Employers' Organisations. In the course of this tribute, it is put on record that "During the whole time that Mr. Armstrong served as a member of the council and on the various committees of the confederation he placed at its disposal his wide experience and wholehearted energy, and the constant support which he rendered to the confederation in its work was a very real factor in its progress and welfare."

Offset Printing and Photogravure.

How They Aid the Advertiser.

By DAVID GREENHILL (Sun Engraving Co., Ltd.).

(Concluded from page 70).

"Telling" Power of Photogravure.

Photogravure is not quite so well known as offset, although one finds that both in America and on the Continent photogravure is increasing in its sphere of usefulness at a much faster rate than appears to be the case in this country. There is, nevertheless, a great deal being done here by a few firms to develop photogravure, and a stage has now been reached when it is possible for photogravure to compete fairly closely, so far as price is concerned, with letterpress, litho, or offset; and, indeed, in some directions it will compete against all of them, even in price; but the great advantage of photogravure in its present stage of development is not quite so much in the direction of price as in, perhaps, what I may be allowed to call, its "telling" or convincing properties. There is a richness of tone and such a wonderful range of gradation that the photogravure picture "tells its story" more effectively than any other picture to-day, and I suggest that in this direction it should be of the utmost advantage to advertisers. In just the same way as a really splendid portrait is often referred to as a "speaking likeness" of a person, so a good photogravure illustration of almost any subject or object can be made into a most "telling" picture. Indeed, it is perfectly wonderful what can be done and is accomplished in one-colour photogravure in reproducing certain classes of goods, the reason being that photogravure, owing to its depth of colour and range of gradation, will give a roundness and a range of tone to an illustration which is unobtainable by any other process as yet known. Thus photogravure illustrations of biscuits and of pottery, though produced in one colour only, would at first sight appear to have been reproduced in two or even more colours.

How Gradation is Obtained.

The power of photogravure in this direction is little known so far. Perhaps a word of explanation as to the reason for this apparent double-coloured effect in a single working would not be inopportune at this stage.

Practically all other of the well-known processes, like letterpress, litho and offset, rely for the variation of gradation on the size of the dot or coarseness of grain used and the amount of white paper shown between the dots or grain patterns. The simplest example of this is, of course, the half-tone block, in which the half-tone dots of varying sizes all equidistant, but large dots and small ones, down to the needle-point dots as they are called, all print, or should print, a perfect black. May I repeat—the variation in tone is obtained by means of the varying size of the dot and the relative amount of white paper surrounding each dot.

In photogravure, however, the process is such that instead of dots, one has cells which are in the form of tiny squares etched into the cylinder with the fine screen lines between them. These cells vary in depth, the high lights being very shallow and the deeper tones having greater depth of etching. The cylinder is flooded with ink, scraped clean by a steel doctor wiper, and a powerful impression causes the paper to extract the ink from the cells, and the image is thus produced, not as in the other processes by the difference in area of dots, or grains, but actually by the amount of variation in the thickness of the film of ink—in the high-lights a very thin film of ink, and in the shadows a comparatively thick film of ink being given.

You will know that if you take a rubbing of pigment, whether it be ink or paint, on a piece of white paper, gradually thinning it down, you will find that in the thin parts you can get quite a transparent, beautiful effect of the colour, so transparent that the white paper has a very distinct influence on the colour; but where the ink or pigment is thicker, this largely overcomes the reflection of the white paper through it and the actual colour of the pigment asserts itself to a greater degree, and where the pigment is very thick you get the full strength and richness of the colour used, and this is precisely what takes place in the printed photogravure result. Instead of getting your isolated dots of varying sizes you get tiny sections all joined up with the film of ink of varying thickness, the result being an enormous range of tone and colour yielded with one working, which is unsurpassed, and, in fact, I think unequalled by any other process.

A few years ago it was practically impossible to reproduce letterpress, i.e., reading matter, by photogravure owing to the prevalence of screen pattern. To-day, however, photogravure has overcome this difficulty entirely, and, indeed, I can illustrate this point best by saying that recently a client asked a firm of photogravure printers to produce a catalogue composed entirely of letterpress matter, and having no illustrations, in photogravure, because, they said, they found that type printed in photogravure was so very clean, strong and distinct.

Great as are the possibilities of photogravure, it, of course, is common with other processes in that it has its limitations; and these limitations are quickly found when the advertiser, being almost invariably used to dealing with letterpress copy, sends in at the last moment indifferent pulls of line blocks, tone blocks and letterpress, and wants them reproduced in photogravure from these second-rate examples of letterpress work. Photogravure will not reproduce well from a half-tone print but, in nearly every case it will produce a result far better in quality than the half-tone will obtain if one starts with an equally good original. I need perhaps hardly press the point that the half-tone impression would already have the half-tone screen showing, and this conflicts badly with the photogravure screen in the final reproduction.

Photogravure's Great Possibilities.

May I also say to all advertising friends that with regard to photogravure, one should recognise not only its limitations but also its possibilities. A great deal more is possible with photogravure than with any of the other processes in the direction of quality, and for that reason when originals are being prepared for photogravure reproduction you can scarcely put in too much in the way of depth of colour and richness of gradation. The photogravure will reproduce this in a way which at present no other process can equal, and when, as one knows, the power of the picture is increasingly found to be effective in advertising, surely it should follow that the more powerful and the richer the original can be made with reasonable hope of fair reproduction by the process, the better and more "telling" should the final advertisement become.

I say in all seriousness that for monotone work the most convincing pictures made to-day are by photogravure, and that these can be, and are, produced on a basis which is quite economical and, indeed, is economical to an extent which is little understood by advertisers in general. Examples are to be seen of photogravure work of high-class nature which will compete in quality with the best work of other processes, also examples of photogravure printed on fast-running machines in large quantities, which by the very nature of the work must be, and indeed is, produced on a strictly commercial and economic basis, and competes not only in quality but also in price with the other processes for such work. In fact, I go farther, and say that in my judgment photogravure, rightly used in advertising, is already the most economical of all processes.

I mentioned earlier that we were on the threshold of a colour age in advertising, and the question must, and does, arise as to how far photogravure is going to assist in the development of this. There are earnest workers in colour gravure to-day, several in this country and many abroad, and already progress showing great promise has been made. I think it is reasonably safe to assume that during the next few years photogravure in colour will take a position similar to that which photogravure in monotone holds to-day.

Of course, it has its failures. The "Chicago Tribune," I think it was, very courageously attempted the colossal and impossible task of producing a large coloured weekly by photogravure, running into big numbers, without clearing the ground step by step properly before attempting same, and although, from what one can see, they made a magnificent fight of it, success was almost impossible from the start. Photogravure in colour is not yet ready for such immense achievements, but I am perfectly certain in my own mind that the time will come when most of the large magazines will reproduce their colour work by photogravure in some form or other. Considerable progress is being made in high-class colour gravure, and I can say without hesitation that before even twelve months are over there will at any rate have been a fair start made in advertising in colour by the photogravure process. I would like to call particular attention to what can be done by colour gravure in the reproduction of cloth patterns, which, to my mind, show an excellent result, and which should be strictly commercial and yet very beautiful in general effect and in fidelity to the original.

In conclusion, I would say to all advertising friends: take an interest in the new processes whilst still using the old to best advantage, but do try to realise their limitations as well as their possibilites, and do consult with your printer friends, who have to do the work, on the nature of the originals to be supplied, before arrangements are made in such a way as to handicap the final result. Co-operation between the printer and the advertiser is more than ever essential, and particularly so when trying to get the best out of these new and very important processes.

Wood for Process Blocks.

A question that has been before the Council of the Federation of Master Process Engravers is that of whether it is not possible to come to some arrangement with one of the large timber-importing firms, to pickle in some way wood for block mounting so that it will be impervious to the effects of water, lye, etc., when in use. The secretary was instructed to make inquiries in this direction to see if it was possible to find any means of treating the wood so that it would neither shrink nor warp.

One importer who has been interviewed has promised to experiment and see if he can find any method of treatment that will meet this requirement. Should the question lead to the finding of a class of wood which, when treated, will stand up to this requirement, it will prove to have been a most valuable inquiry. In any case, the Council will pursue the idea till it either becomes a reality or else has to be turned down as impossible.

Bible Paper.

German Admiration of a British Speciality.

The *Papier Zeitung* draws attention, in a recent issue, to "Cambridge India Paper" made by Messrs. James R. Crompton and Bros., Ltd., of Bury. Some printed samples came under the notice of our contemporary, and at once aroused admiration owing to the extraordinary covering quality with both text and blocks. Although weighing only 26 grms. per sq. meter, the paper is so evenly made and the loading so appropriate that the opacity is such that even heavy blocks do not show through. The remark is made that such paper by German makers has not been seen, and they are recommended to capture this field of business. The German makers have raised objection to the statement of opinion, and in a later edition the *Papier Zeitung* mollifies them by a sort of admission that quite similar paper can be produced in Germany. In our own experience this particular class of paper is peculiarly a British speciality, which we have never seen equalled elsewhere

Australian Notes.

Newspaper Profits—New Companies—Big Printery Fire—Federal Wage Award—Unemployment Benefit — Process Engravers' Conference—Libel Case Verdict.

(From Our Sydney Correspondent.)

A VERY satisfactory state of affairs is indicated in the accounts of *Sun* Newspapers, Ltd., for the year at March 29th which show net profits of £110,941 compared with £106,159 a year ago. Capital is stated at £894,048 against £804,408 on the previous occasion. Dividend is at the usual rate of 12 per cent., and after payment of four quarterlies there is a balance of £18,000 for general reserve, and £1,369 to carry forward. Creditors figure at only £35,565 against £128,335 last year. Reserves have increased by £50,000. There is an increase of £42,000 in assets, the total of the balance-sheet being £1,125,006.

COMPANIES recently registered in New South Wales, with shares of £1 each, include the Week-Ender Publishing Co., Ltd.; capital, £5,500, to take over and carry on the business of the Week-Ender Publishing Co. as publishers and printers. The registered office is at Sydney.

ANOTHER is Manly and Districts Newspapers, Ltd.; capital, £5,000, to acquire from S. V. Ford and H. J. Skelton the business of newspaper proprietors and printers now carried on by them at Manly. The registered office is at 64, Belgrave-street, Manly.

A VERY serious fire occurred recently in a two-storey building at the back of the *Australian Home Journal* premises at 407, Kent-street, Sydney. On the top floor of the building the plant and paper stock of the M.B.C. Systems Press, general printers, was badly damaged; linotypes owned by Messrs. Wallace and Boardman were affected by heat and water on the second and ground floors; and the stairways and fittings on all floors were completely gutted. The damage is estimated at well over £5,000.

A JUDGMENT delivered recently by Mr. Deputy-President Webb on the application of the Printing Industry Employees' Union for an award covering all sections of the industry in New South Wales, Victoria, South Australia and Tasmania fixed the margin for skill for the hand compositor at 4s. a day, or 24s. a week.

THE 24s. margin for skill is an increase of 4s. on that hitherto allowed by the State Court. It is likely that this margin will also apply to letterpress machinists, bookbinders, paper rulers, and lithographers where at present much lower margins prevail. As the latest figures of the Commonwealth Statistician give a Federal basic wage of approximately £4 6s. for Sydney, the result of the judgment will be an increase of approximately 8s. per week to members of the applicant union, as well as ensuring for them a weekly wage, *i.e.*, payment for statutory holidays, which in previous applications before the Federal Arbitration Court has been assessed at 5s. per week.

PARTICULARS of the unemployed benefit scheme drawn up by the Amalgamated Printing Trades Union have been submitted to the membership, and it has been decided to give them a three months' trial pending the registration of the new rules of the organisation. The scheme makes possible the payment of 30s. a week for 12 weeks, and more in certain cases.

TWENTY-FOUR delegates attended the conference of Master Process Engravers of Australia, held at Wentworth Falls. The conference made an important step towards agreement as to the three shades of colour used in three-colour work.

THE jury in the action in which Roy Neville Connolly, journalist, sued the *Labour Daily*, Ltd., to recover £2,000 compensation for having, as he alleged, wrongfully dismissed him from his position as editor of the defendants' paper, returned a verdict for the plaintiff for £442. A stay of proceedings was granted.

Orders and Prices.

Paper Market Still Quiet.

The paper market is still quiet and home traders especially are grumbling at the lack of business. Each order is contested with ever-increasing keenness and the final result is the barest margin of profit to the merchant, and in many cases none at all for the mill. Hand-to mouth buying is still the order of the day. Germany and Austria are feeling the benefit of a largely increased home demand; prices are consequently firm. The satisfaction felt by home mills on this account is, however, somewhat spoilt by the probability of a sudden unexpected return to price-cutting, should this demand not be maintained.

Fine paper mills are still short of orders, tendency towards inferior substitutes being the general rule. Some of the esparto and wood free mills have fairly healthy order books, but in general they cannot be said to be busy. There has been no particular movement to report in the way of prices, but their present condition lends itself to negotiation. News mills still maintain fairly good order books, most of them having their output taken up to the end of the year. Wrapping mills are, as they have been for some time, suffering from Continental competition.

Generally speaking, there is no great change to report in any section of the trade. We appear to be still some way from that stiffening in prices which is so necessary and which would undoubtedly create a more healthy situation all round. With the lack of demand, however, such a stiffening is impracticable at the moment.—*British Industries.*

THE Yorkshire Paper Mills, Ltd., the directors announce, is a distinct undertaking and in no way connected with the old company of Charles Marsden and Sons, Ltd., and associated concerns. It appears some holders of securities in the latter companies were under the impression they had a right to exchange for shares in the Yorkshire Paper Mills, Ltd.

Royal Charter Bond

Facsimile of Watermark.

Is a high-grade paper at a moderate price.

It is obtainable in White, Azure and Sepia, in a wide range of substances together with envelopes to match.

A sample book showing each colour in all substances will be sent upon application (WITHOUT PRICES IF DESIRED).

THURSDAY, AUGUST 6, 1925.

The Royal Society of Arts Competition.

WE deal at considerable length on another page with the judges' comments and awards in connection with the "Book Production" and "Miscellaneous" sections of the "Open Competition of Industrial Designs" instituted by the Royal Society of Arts. We indicate there our own impressions of competitors' work as seen in the exhibition now on view to the public, and we also make a suggestion or two respecting possible means of attracting more adequate support from the trade. It may be fitting, however, to make further reference here to the same subject by way of pointing out the value of such a competition to prospective candidates and to the industry as a whole. That an award bears the name of the Royal Society of Arts means that it will be a real recommendation to its holder, and there must be general confidence in the reasonableness of awards in book-production when it is known that the adjudicating committee consists of well-known experts including Mr. George W. Jones It is obvious that those who gain distinctions in this competition gain what must be of assistance to them in their industrial career, and it is obvious also that the competition if adequately supported will have its desired effect in raising craft standards. We hope that next year's competition will call forth the best efforts of many more training institutions and many more craft workers. Surely we do not possess in the printing and allied trades so many channels whereby the student or craftsman may win prizes, may receive public commendation and may have his work brought to the notice of commercial users of print, that we can afford to pass by such a means for the encouragement of craftsmanship as is offered in the Royal Society of Arts Competition!

Standardisation of Paper.

THE standardisation of paper on the limited scale indicated by the agreement is fast on the way to becoming an accomplished fact in practice. Several houses are hard at it arranging and producing new lists. Printers are already requesting their orders to be executed on the newly approved basis. Before long we shall be able to estimate the advantages of the scheme. There is one thing we wish to urge in regard to board substances, and that is the general adoption of a specification combining thickness in thousandths of an inch and lbs. per 100 sheets. It will be an inestimably fine help to the printer and board user to have it so, and it will be no difficulty to the merchant to give it. Substance is one factor and weight is another, and neither can be dispensed with if we are to have boards on a standard basis.

* * *

News-Print Makers' Alarm.

BRITISH news-print mills have, in recent years, enjoyed an exceptional degree of prosperity in comparison with other sections of the industry. There have, however, been special reasons for this, but there are now fears that circumstances in future will be less favourable. One of the reasons for the activity which has been noticeable in our news-print plants has been the enjoyment of preferential treatment in Australia. This concession will in future be shared with Canada, and there is not the slightest doubt that this extension of preferential duties will affect shipments to the Commonwealth from this country very seriously. No good purpose would be served, of course, by referring again to the deplorable political blunder which robbed the British paper industry of the special privileges which it enjoyed in Australia. We have from time to time indicated that the British papermakers have gained by the special treatment vouchsafed to them by the Commonwealth Government. In 1921, for example, exports of news-print from the United Kingdom to Australia amounted to 5,832 tons, and the increases during the ensuing years may be seen from the following figures: 1922, 17,597 tons; 1923, 60,437 tons; 1924, 73,260 tons. During the first five months of the present year consignments of news-print had reached 40,952 tons, or at the rate of 100,000 tons per annum. In other words, British news-print mills, with a capacity of 10,500 tons per week, were running in 1921 at about 75 per cent. of capacity. This rose in 1922 to 84 per cent., in 1924 to 88 per cent., and in 1925 to 93 per cent. What this exceptional fortuitous trade meant to British mills is known only to those who are intimately acquainted with the facts.

* * *

A New Situation.

Now, with Canada enjoying equally with British papermakers preference in the Australian market, there is opened up an entirely new situation, and news-print manufacturers in this country are considerably perturbed at the prospect. The situation is rendered all the more precarious by the coming into operation of new machines, not only in this country, but abroad. In the United Kingdom alone this year there will start up certainly three additional machines, and possibly five. Moreover, there is the output in Scandinavia to be taken into account. During the past year no less than 100,000 tons of news print went to the United States from Scandinavia. Furthermore, from now onwards there will be a surplus production of 2,000 tons a day in the States and Canada, while the normal rate of increased production is about 400 tons per day. All this surplus paper will render extra supplies available for the Australian and British markets and will come into direct competition with the products of our own mills. No wonder, then, that British manufacturers are concerned at the outlook.

Royal Society of Arts Competition.

Results in Graphic Arts Sections.

The Royal Society of Arts Competition of Industrial Designs, 1925, has, on the whole, brought forth a considerably increased number of designs submitted—2,033 by 813 candidates, as against last year's total of 1,408 designs by 553 competitors. The judges in the various sections, having met several times during the last few weeks, have now made their awards and prepared their reports, and a selection of the designs received in the competition are being exhibited in the North Court of the Victoria and Albert Museum, South Kensington. The exhibition was shown to the Press on Friday, and was opened to the public on Saturday, to remain open until August 31st next, on Mondays, Tuesdays, Wednesdays and Fridays, from 10 a.m. to 5 p.m., on Thursdays and Saturdays from 10 a.m. to 9 p.m., and on Sundays from 2.30 to 6 p.m. The exhibition is open free of charge, no tickets being required.

The competition, it will be remembered, is not confined to subjects of special interest to the printing and allied crafts, but in addition to sections devoted to architectural decoration, textiles, furniture and pottery and glass, there is a section for book production and a miscellaneous section which includes designs for posters, the decoration of chocolate boxes, etc., sent in response to the offer of scholarships and prizes by Messrs. Cadbury Bros., Messrs. J. S. Fry and Sons, Messrs. Lever Bros., Messrs. Nestlé and Messrs. A. and F. Pears, in connection with the same competition, and for designs for a Christmas number of the "Graphic" for a prize offered by the proprietors of that journal.

Not a Representative Display.

In respect of the designs relating to the graphic arts and crafts we confess to disappointment at finding that the students and practitioners in printing and the allied crafts have not made a more representative and creditable display of initiative and executive ability. Perhaps the blame for this rests not wholly upon the possible candidates, for it seems to us that the organisers of the competition have not done all they might have done to make the competition an attractive one. Thus it must surely be limiting to the free play of originality if a candidate remembers that the subject given him for a title page, "The History of Tom Jones, Foundling," was the subject of scores of last year's designs, many of which he probably saw. Moreover, a student who "laid himself out" on this same subject last year and failed to draw any encouragement from the judges, would doubtless be more likely to try again this year if a fresh subject were offered.

Our disappointment was greatest in respect of the sub-sections relating to bookbinding. We had hoped that the meagre but interesting display of last year would have been considerably improved upon, but were disagreeably surprised to find but a single example of bookbinding design exhibited, and this a design which, though showing skill in execution, was not altogether pleasing in general effect and was open to serious criticism in detail. Perhaps a reason partly accounting for the failure of this section of the competition may be found in the fact that many a practical bookbinder who can show originality and skill in the use of binder's tools on leather is not nearly so sure of himself in the use of pen, pencil or brush on paper. If the competition authorities do not find it desirable to handle and exhibit complete bound volumes, perhaps the bookbinder might be allowed to submit instead of a design merely, an actual leather or cloth bound side, back or complete cover, laid out flat suitable for wall display.

The exhibition is somewhat more interesting as regards the exhibits on the art side than it is on the craft side of the printing and allied trades. Illustrative and decorative work shown in line and colour contains some striking and beautiful examples, even if the standard of quality as a whole is not high.

Book Production.

In Sub-Sections 1 and 2, devoted to designs for title pages and text pages of books, the judges' report states that they regret that so poor a response has been made by printers to the invitation to take part in the competitions, which have for their object improvement in book production. With the exception of one or two examples, those sent in are unworthy of the printing craft, and cannot be said to be representative of the work done in average book printing offices. A number of examples which were submitted for exhibition have been rejected. The awards are as follows:—

TITLE PAGES.

"The History of Tom Jones."

(a) Set in Type: Prize of £6 6s. to Harry Felix Paroissier (London School of Printing) (No. 1153).

Prize of £4 4s. to James Shand (53, Anson Road, Tufnell Park) (Nos. 81 and 84).

(b) Partly decorated: Prize of £10 10s. to Frederick Angus Horn (Bradford School of Arts and Crafts) (No. 1029).

(c) "On the Morning of Christ's Nativity": Prize of £7 7s. to James Shand (Nos. 85 and 86).

Prize of £3 3s. to Harry Felix Paroissier (No. 1152).

(d) A Scientific Paper: Prize of £5 5s. to Harry Felix Paroissier (No. 1154).

Prize of £2 2s. to James Shand (No. 90).

In regard to book pages, the judges say they are unable to make any award in this Sub-Section, and they regret that no competitor submitted examples of text-pages for "The History of Tom Jones" and the Scientific Paper.

In respect of illustrations (Sub-Section 3), the standard of designs for both line and colour illustrations is low. Competitors should remember two points: (1) That in illustration imagination plays a more important part than mere technical excellence of execution; and (2) that in line illustration particularly the juxtaposition of type is a governing factor. It would be pleasant in future years to see more originality in the exhibits. The awards are as follows:—

For a Line Illustration: Prize of £10 10s. to Miss Cecil Higgs (Goldsmiths' College School of Art) (No. 1310).

For Colour Illustrations: Prize of £5 5s. each to Alfred Edward Kerr (12, Deramore Avenue, Belfast) (No. 55), and Miss Joan Ivory Packham (Croydon School of Art) (No. 933).

The judges found a generally high level in the designs submitted in Sub-Section 4—design for general use as (a) an end-paper, or (b) a cover paper. Many of them showed character, combined with appropriateness for their purpose and suitability for production. As in other classes, some competitors did not observe the condition that the designs were to be suitable for general use. The awards are as follows:—

Prize of £10 10s. and an Owen Jones Medal to Miss Evelyn Dorothy Goggs (L.C.C. Central School of Arts and Crafts) (Nos. 254, 255, 256, 258).

Prize of £10 10s. to Miss Frederica E. Graham (L.C.C. Central School of Arts and Crafts) (Nos. 1320, 1322).

Prize of £5 5s. to Miss Evelyn Gwendoline Maw (L.C.C. Central School of Arts and Crafts) (Nos. 1544-6).

Commended:

Mrs. Saidie Frances Cooper ("Heremai," Kingswood Lane, Hansey Green, Warlingham) (Nos. 720, 721).

Frederick Angus Horn (Bradford School of Arts and Crafts) (Nos. 1036, 1039).

In Sub-Sections 5 and 6 (designs for bindings), the judges regret that the designs submitted are very weak. None were specially appropriate for the book specified in the conditions, several were even designed for other books. The only design accepted is not considered worthy of any award. The design is not definitely appropriate either to the subject of the book or its period; the lettering on the side is weak and badly placed, and the design of the back is without sufficient recognition of technique.

Miscellaneous.

In regard to Posters, judges state that, generally speaking, the work in this section was not of a high order. Very little originality was shown, most of the designs being either commonplace or straining after effect in the wrong direction. The quality of the drawing also left a great deal to be desired. Designs, relying, as they should do, on smart and original ideas, well drawn, and carried out with taste and simplicity, were very few and far between. In the section for a design for a "Gift Box" for Messrs. A. and F. Pears, the character of the designs did not justify awards being granted. The report of the judges on the posters for "Ideal Milk" is being held over for further consideration. On the whole, however, the general tendency was towards improvement, as compared with last year's Competition, but it is obvious that exhibitors should devote their attention to the study of drawing, and endeavour to obtain the right atmosphere in the carrying out of their designs.

POSTERS FOR THE TRAVELLING SCHOLARSHIP OFFERED BY MESSRS. CADBURY BROTHERS, LTD.

The Cadbury Bournville Travelling Scholarship of £50 is awarded to:

Miss Ivy Evelyn Norman (Nottingham School of Art) (No. 1643).

Highly commended:

Edward Loxton Knight (Nottingham School of Art) (No. 1639); Gerald Leake Searson (Nottingham School of Art) (No. 1649).

Commended:

Wilfred Charles Balloch (Nottingham School of Art) (398); Miss Aline Dugard (Nottingham School of Art) (No. 1632).

POSTERS FOR PRIZE OFFERED BY MESSRS. LEVER BROTHERS, LTD.

The prize of £50 is awarded to:

Alfred Kemp Wiffen (Nottingham School of Art) (No. 1657).

Highly commended:

Albert Edward Halliwell (Southport Victoria School of Art) (No. 1759); Edward Loxton Knight (Nottingham School of Art) (No. 1642).

Commended:

Miss Kathleen Ardern (Sheffield Technical School of Art) (No. 1064); Miss Gwynedd Mary Hudson (The Wick Studio, Hove, Sussex) (No. 626).

POSTERS FOR PRIZES OFFERED BY MESSRS. NESTLÉ.

Nestlé Milk Poster.

The First Prize of £50 is awarded to:

Miss Aline Dugard (Nottingham School of Art) (No. 1633).

The Second Prize of £25 is awarded to:

Clifford Lee (Sheffield Technical School of Art) (No. 1075).

The Third Prize of £10 is divided between:

Joseph Whitehead (Hyde School of Art) (No. 667); and Alfred Kemp Wiffen (Nottingham School of Art) (No. 1658).

Highly commended:

Miss Ivy Evelyn Norman (Nottingham School of Art) (No. 1645).

Commended:

Leo Hardy (Sheffield Technical School of Art) (No. 1072); Miss Wilma Hickson (of 142, Gower Street, W.C.) (No. 1312).

Ideal Milk Poster.

Commended:

Wilfred Charles Balloch (Nottingham School of Art) (No. 1628).

PRIZES OFFERED BY MESSRS. J. S. FRY & SONS.

Display Box Lid and Label.

The First Prize of £25 is divided between:

Joseph Bentham Jenkinson (Liverpool City School of Art) (No. 341); and Miss Bertha Julia Olyett (The Black and White Studios, 12-13, Bedford Street, Strand, W.C.) (No. 1194).

A prize of £5 each is awarded to:

Miss Marjorie Willmott Robinson (Sheffield School of Art) (No. 1086); and Miss Verna Camidge Stead (Keighley School of Art) (No. 616).

"Somerdale" Wrapper.

The First Prize of £25 is divided equally between:

John Francis Smith (of 2, Alder Grove, Waterloo, Liverpool) (No. 471); and Miss Maeve Wolfe (of The Poilt House, Pitts Wood, Tonbridge, Kent) (No. 1432).

A prize of £5 each is awarded to:

Miss Mary Dawson (Keighley School of Art) (No. 613); and Miss Enid Gwynedd Stokoe (Croydon School of Art) (No. 1123).

PRIZE OFFERED BY THE PROPRIETORS OF THE "GRAPHIC."

Although some of the designs showed considerable merit, the judges could have wished for more signs of originality, and they consider that in many cases the drawing was very weak. Three of the works submitted showed outstanding merit, and in the opinion of the judges the design for the prize fulfilled all the conditions required by the donors.

A prize of £25 and an Owen Jones Medal is awarded to Alfred Kemp Wiffen (Nottingham School of Art) (No. 1659).

Highly commended:

Miss Mary Steveni Lea (Southport Victoria School of Art) (No. 1757), and Ronald Alfred Harrison (Bath Muncipal Technical College Art School) (No. 426).

DIVIDENDS AND REPORTS.

BENN BROTHERS.—Report for the year ended June 30th states that the requirements of the company did not justify any further issue of capital, but a savings scheme for employees has been inaugurated, the contributions to which will be ready for investment in the company's shares. The new building in Fleet-street will be ready for occupation next spring. Down to the date of the accounts the expenditure under this head was met out of current resources. During the year shares in William Rider and Son, publishers of the *Timber Trades Jonrnal*, etc., were purchased. The net profit for the year was £31,426 (against £28,065 for 1923-24). A sum of £10,000 has been placed to reserve (last year £10,000 was put to development fund), and the dividend for the year is again 17½ per cent. The "carry forward" is raised from £11,165 to £15,321.

LIVERPOOL DAILY POST AND ECHO.—Interim dividend on the ordinary shares for the half-year ending June 30th at 2s. per share (less tax), payable August 15th (same as last year).

NEW COMPANIES.

J. ANDREW AND CO., LTD.—Capital £20,000, in £1 shares; to acquire the business of printers, publishers, stationers and newspaper proprietors now carried on at Market-place, Ashton-under-Lyne, as "J. Andrew and Co." Private company. Subscribers: W. H. Andrew and J. H. Andrews. Solicitor: H. S. Heap, Ashton under-Lyne.

EDWIN THOMAS AND CO. (1925), LTD.—Capital £2,000, in £1 shares; to carry on the business of stationers, printers, photographic printers and photo lithographers, engravers, envelope manufacturers, paper, paper bag, account book and boxmakers, etc. Private company. Subscribers: H. C. Brannan and W. R. Chapman. Registered office: 34, Upper Thames-street, E.C.4.

SABEL AND WATTS, LTD.—Capital £2,000 in £1 shares (1,000 pref. ord. and 1,000 deferred ordinary); to adopt an agreement with F. J. Sabel and to carry on the business of manufacturers of and dealers in paper of all kinds and articles made from paper or pulp and materials used in the manufacture or treatment of paper, etc. Private company. Directors: F. J. Sabel and A. A. Watts. Registered office: 179, Upper Thames-street, E.C.

HYDRO-PRESS MACHINES, LTD.—Capital £2,000, in 1,900 8 per cent. cumulative participating preference shares of £1 each and 2,000 deferred shares of 1s. each; to acquire the business of engineers and manufacturers of ticket and show card machines, etc., heretofore carried on at Anchor and Hope-lane, Charlton, as "J. L. Richards." Private company. Directors: J. L. Richards and E. F. Sargent. Registered office: Hydro-Press Works, Anchor and Hope-lane, Charlton, S.E.7.

"BLUE PETER" PUBLISHING CO, LTD.—Capital £2,000, in £1 shares; to acquire the business of a publisher carried on by F. A. Hook, under the name of "Blue Peter" Publishing Co, at 12, St. Mary-axe, E.C. Private company. First directors: F. A. Hook and Adeline M. Hook. Registered office: 12, St. Mary-axe, E.C.

LAMSON AGENCY, LTD.—Capital £3,000, in £1 shares; to acquire the business of an advertising agent carried on by F. A. Hook at 12, St. Mary-axe, E.C., as "The Lamson Agency." Private company. First directors: F. A. Hook and Adeline M. Hook. Registered office: 12, St. Mary-axe, E.C.

NORWICH BOX CO., LTD.—Capital £6,000, in £1 shares (4,000 7½ per cent. cumulative preference and 2,000 ordinary); to acquire the business of a box manufacturer formerly carried on by the late Alfred I. Haldinstein in Norwich as the "Norwich Box Co.," and to carry on the business of manufacturers of boxes of all kinds, cardboard manufacturers, printers, stationers, typefounders, engravers, dealers in cardboard, millboards, paper and other materials used in the manufacture of boxes, etc. Private company. Subscribers: W. R. Howell and E. E. Blyth. Directors: Mrs. E. R. Haldinstein and G. E. Haldinstein. Secretary: W. R. Howell, Queen-street, Norwich.

STENALEES CHINA CLAY CO., LTD.—Capital £5,000, in £1 shares; to adopt an agreement with J. Gilbert and F. Lobb and to carry on the business of producers or manufacturers of and dealers in china clay, mica, clay, china, etc. Private company. Directors: J. Gilbert, F. Lobb, R. J. Lobb, J. Kestell, A. S. Bennett, E. A. Wedlake and N. Hugh. Solicitors: Higman and Hubbard, St. Austell.

BRITISH CELLOFOILS, LTD.—Capital £10,000, in £1 shares; manufacturers of and dealers in foils, films, plates, rods, tubes, yarns and similar articles of cellulose, paper, fibre, rubber, metal or other materials, and all kinds of receptacles, bottles, jars, containers, tools, implements and articles, chemical manufacturers, etc. Private company. Directors: G. Frenkel and A. G. J. Anderson.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

PERCY LUND HUMPHRIES AND CO., LTD. (printers, publishers, etc, Bradford).—Satisfaction in full on July 13th, 1925, of debenture dated July 1st, 1895, securing £2,000.

LONDON CALEDONIAN PRESS, LTD.—Satisfaction to the extent of £22,500 on June 30th, 1925, of debentures dated November 7th, 1923, securing £40,000.

J. WHITAKER AND SONS, LTD. (printers, publishers, etc., London).—Satisfaction in full on July 13th, 1925 (a) of debenture dated September 23rd, 1921, securing £7,000, (b) of mortgage dated December 21st, 1915, securing £5,000, and (c) of mortgage dated September 23rd, 1921, securing £7,000.

E. T. W. DENNIS AND SONS, LTD. (art publishers and printers, etc., Scarborough).—Satisfaction in full on May 1st, 1925, of mortgage dated February 5th, 1915, securing £5,000 and further advances.

LONDON MERCURY, LTD.—Issue on June 18th, 1925, of £800 debentures, part of a series already registered.

UNDERHILL (PLYMOUTH), LTD. (printers, etc.).—Mortgage on 14, Frankfort-street, Plymouth, with fixtures, etc., dated July 6th, 1925, to secure all moneys due or to become due from the company to the National Bank, Ltd.

HOLDEN, FLETCHER AND BLOORE (PRINTERS), LTD.—Mortgage dated July 22nd, 1925, to secure £4,000, charged on land near Haywood-street, Leek, Staffs, with printing works in course of erection thereon and fixed machinery. Holders: Leek and Moorland Building Society, Leek.

THORNHILL SALES SERVICE, LTD. (London).—Debenture dated July 16th, 1925, to secure £310, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Miss V. D. Verral, 14, Mount Sion, Tunbridge Wells.

BANKRUPTCY.

Re SUTLIFFS, LTD., bookbinders, printers and stationers, 11, Albion-place, Clerkenwell, E.C.—The statutory first meetings of the creditors and shareholders of this company were held last week at the Board of Trade offices, Carey-street, W.C. The company was formed on October 8th, 1924, with a nominal capital of £1,800, and the accounts under the liquidation show liabilities £915 against assets valued at £398. The paid up capital is returned at £1,752. In the absence of a quorum the meetings were formally adjourned for one week, when it is anticipated that the liquidation will be left in the hands of the official receiver.

RECEIVER APPOINTED OR RELEASED

ADLOWS, LTD. (publishers, etc., London).—Miss V. V. Noble, of 154, King's Cross-road, W.C.1, was appointed receiver and manager on July 13th, under powers contained in debenture dated March 23rd, 1925.

IN the Companies Winding up Court, last week, Mr. Justice Eve made a compulsory order for winding up of C. J. Culliford and Sons.

A. W. K. TRUEMAN AND SON, LTD.—Under a winding-up order made on May 19th, a meeting of creditors will be held at 33, Carey-street, Lincoln's-inn, W.C., on August 6th, at 11.30, followed by a meeting of contributories at 12 o'clock.

Re THE HYDE PAPER MANUFACTURING CO., LTD. (in voluntary liquidation).—A general meeting of members of this company will be held at the office of the liquidator (Mr. M. C. Rogers), 31, Water-street, Hyde, on August 19th, 1925, at 3 p.m.

"THE BEST EQUIPPED PRINTING INK PLANT IN THE BRITISH EMPIRE."

EMPIRE INKS

The Best that Experience and Science have yet Produced

Manufactured Solely by:

THE EMPIRE PRINTING INK CO. LTD
INCORPORATING
MASON & MASON LTD

6, TUDOR STREET LONDON, E.C.4.

EMPIRE INKS with the "QUALITY KICK" in every Can as used on the London Leading Daily Newspapers.

NO ORDERS TOO LARGE AND NONE TOO SMALL.

No Boards for Bales

of ART, ENAMEL, GUMMED or PLAIN PAPER

Typical Bale weighing cwts. 2 qrs. 3 lbs. 4

By a simple and economical patent system we have eliminated all the worries of paper baling.

No creasing or string marking.

Hermetically sealed, the bale is dust, damp and pilfer-proof.

In daily use for bales up to 2½ cwt. and 50" long without baling boards.

The saving effected in packing charges is almost incredible.

HOW IS IT DONE?

On receipt of Enquiry we shall give full particulars and also arrange for demonstration in your own dispatch department free of all obligation.

Method of Baling.

PATENT App. No. 30327-24.

"I HOLD FAST."

PARTNERSHIP DISSOLVED.

F. Hutchinson and J. W. Hutchinson, printers, bookbinders and stationers, 15, King-street, Lancaster, under the style of John Kellett.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Baron John C. Keen-Hargreaves, Egyptian House, 170–173, Piccadilly, and lately carrying on business at 43, New Bond-street, London, journalist.

W. S. Robson, of 31, Fitz-Arthur street, Armley, Leeds, paper merchant.

London School of Printing.

Improvement of Status.

Last week's meeting of the London County Council not only adopted the Burnham Report—which provides for increases of the salaries of assistant teachers in technical schools—but also agreed to advance the London School of Printing from Group II to Group II(a). This alteration of grade means a recognition of the increased importance of the London School of Printing, and it also involves an increase of salary for the principal. The salary of the principal of a Grade II school commences at £850 and rises by increments of £50 to £950, whereas the salary of the principal of a Grade II(a) school commences at £850 and rises by increments of £50 to £1,060.

With regard to the success of the London School of Printing, it may be pointed out that this year the whole of the medals presented by the Worshipful Company of Stationers have been secured by students of the School. Again, Leslie Arthur Grover and William James Burrows obtained the first prizes and silver medals in the Press and Machine and Composing sections of the City and Guilds of London Institute examinations, while James Shand obtained the second place and silver medal in the Machine work section. In addition to the above, James Shand and H. F. Paroissier were successful in obtaining high places in the practical competitions (open to all England) held by the Royal Society of Arts for the purpose of improving book production.

Evans, Gadd and Co., Ltd.

Successful Athletic Sports.

The second athletic sports of Messrs. Evans, Gadd and Co., Ltd., manufacturing stationers, of Exeter, were held at St. James's Park, before a large number of friends and visitors The results were as follows:—

Throwing cricket ball: R. Townhill. 100 yards handicap: 1, Tucker (scratch); 2, Townhill (8 yards); 3, Blackmore (scratch). Ladies' race: 1, Miss Came; 2, Miss Shaw; 3, Miss Baker. Tug-of-war (male): Mr. Pring's team. Egg and spoon race: 1, Moore; 2, Blackmore; 3, Miss Oatway. Jockey race: Pritchard and Blackmore. High jump (male): 1, Tucker (4 ft. 6½ ins.); 2, Bradford (4 ft. 6 ins.); 3, Cox (4 ft. 5½ ins.). Wheelbarrow race: 1, Snell and Kelland; 2, Yeo and Matthews. Tug-of-war (ladies): Miss Baker's team. Quarter mile handicap: 1, Tucker (scratch); 2, Torr (scratch); 3, Townhill (25 yards). Sack race: Milton. High jump (ladies): 1, Miss Redwood; 2, Miss Came. Three-legged race: 1, Pritchard and Hole; 2: Miss Shaw and Miss Manley. Veterans race. 1, Yeo; 2, J. Lee. Relay race: Team No. 2.

Tea was provided during the interval. Arrangements were ably carried out by Messrs. Tucker and Trevelyan. The Misses Pollard and Rew were responsible for the refreshments. A most enjoyable afternoon's sports concluded by Mrs. Southerden presenting the prizes.

THE August *Pearson's Magazine* is a special holiday number, and is filled with interesting matter eminently suitable for the holiday-maker's entertainment.

John Dickinson Fire Brigade.

Following closely on their recent successes at the South Midland District Meeting held at Edgware by the National Fire Brigades' Association, the John Dickinson Fire Brigade have added to their laurels further successes at the National Fire Brigades' Association Tournament and Camp held at Torquay, July 18th to 25th. They have again won the Mitchell and Butler's Grand Aggregate Shield for the fourth year in succession, and the fifth time in all, thus creating a record for the number of times the Shield has been won by one brigade. This undoubtedly speaks well for the consistent efficiency of the Brigade when consideration is taken of the variety of the drills which are counted in this competition, they scoring 5,904 points out of a possible 6,000.

Their further successes are:—

Apsley Mills Brigade.

Junior Manual, 1st prize, Shield; time, 43⅘ seconds.

National Motor Pump, 2nd prize, Cup; time, 80 seconds.

Combined Motor Pump, 2nd prize; time, 92 seconds.

National Escape, 2nd prize; time 64⅘ seconds.

Four Men Ambulance, 2nd prize: 89 per cent. marks, possible 100 per cent.

Steamer Turnout, 3rd prize; time, 41⅘ seconds.

National Manual, 3rd prize; time, 46 seconds.

One Man Manual, equal 3rd prize; time, 33⅘ seconds.

One Man Ambulance, 4th place; 92 per cent. marks.

Best kept Tent, equal 2nd prize.

Mitchell and Butler's Grand Aggregate Shield.

Croxley Mills Brigade.

Steamer Turnout, 1st prize; time, 35⅘ seconds.

One Man Manual, equal 3rd prize; time, 33⅘ seconds.

Dewar Motor Pump, 3rd prize; time, 41⅘ seconds.

Chinese Paper Umbrellas.

Details concerning the manufacture of paper umbrellas in Foochow, which is an important centre for this class of product, appear in a bulletin issued by the Chinese Government Bureau of Economic Information. The framework and handle of the umbrella are made of bamboo and the shade of tissue paper, painted with tung oil. When the framework is sewn with cotton yarn or human hair tissue paper is put on top, one layer over the other, and tung oil at the same time applied evenly. The tissue paper is not strong in itself, but once tung oil is applied it becomes sun and waterproof. When the shade is completed the whole is coloured and painted.

When the umbrella is completed it is opened and placed in a dry place to hasten evaporation, which takes about a month before it is ready for packing. The price for a common umbrella ranges from 30 to 50 cents; an improved lady's parasol from 60 cents. Umbrellas for export to other ports in China are usually packed in big cases of about four hundred pieces each, and those for America and London in small cases of one hundred and fifty to two hundred pieces each. Exports to America have advanced considerably in recent years.

CANADIAN NEWS-PRINT IN SOUTH AFRICA.—According to the schedule of preferential rebates of duty issued by the Union of South Africa, news-print in reels or in the flat exported from Canada to South Africa receives a rebate of the whole duty, viz., £1 10s. per 2,000 lb. This rebate is the same as on newsprint of British manufacture entering the Union.

THROUGH Messrs. Wardill and Gilbert we have received a unique and useful mirror paper weight, with perpetual calendar, which Billeruds Aktiebolag, Säffle, Sweden, are sending out to their friends. This circular device has the mirror on one side and the calendar on the other, so that each can be referred to in turn. The date for any week, past, present, and future, can be known by the simple turning of the wheel which represents the weight. Altogether a handy and useful ornament.

The Indian Paper Market.

The Agitation for a Protective Duty.

The evidence given before the Tariff Board by local paper mills appealing for an imposition of a protective duty of 10 to 20 per cent. on all imported papers (except newsprint), in addition to the revenue duty of 15 per cent. at present levied, has been published from time to time in this journal.

A strong protest has been made against the application of Indian paper mills by the Calcutta Paper Trades' Association, a body mainly composed of wholesale dealers in home manufactured and imported papers. It is contended that the imposition of a duty representing 30 to 40 per cent. would be injurious on general and economic grounds. The lack of earning capacity on the part of the home mills is attributed to the slump in trade which has affected the paper industry throughout the whole world, and not from any dumping. It is also suggested that the unfavourable position of home mills may be due to mismanagement and the lack of expert and technical knowledge.

A close examination is made of the papers produced by Indian mills and imported papers, and the conclusion arrived at is that the former may be considered suitable where finish and appearance are of no account and that the preference for imported papers is due to improved appearance and finish. It is admitted that the local mills have recently endeavoured to improve quality by adding imported sulphite to grass pulp, but this is qualified by the statement that "an impression created by 30 to 40 years of inattention to market demands cannot be wiped off within a short time."

The Calcutta Paper Traders' Association, after a survey of the whole range of the productions of local mills and the competing imported qualities, emphasies its firm belief that the imposition of protective duties would not confer the advantages local mills anticipate, but would lead to very injurious effects, direct and indirect. The necessity of an improved classification of imports is urged, as present returns are indefinite and misleading. The general conclusions of the Association are: (1) That country-made papers are, in many respects, not of the standard quality, and are unsuitable for the various purposes required by customers; (2) that the effecto f the duty would transfer only a small part of the trade to the local mills; (3) that inferior grades of imported paper would come in to fill up the gap.

The Association ridicules anything in the nature of dumping. The difficulties of the local mills are attributed to over-production and internal competition.

In reference to a statement made that some English manufacturers are foisting German papers on the Indian market as English after changing wrapper and label, the Calcutta Paper Traders' Association is of opinion that such cases must be too rare and isolated to deserve serious consideration. It is recognised that German and Scandinavian papers come through English mills (export departments) and houses, but they are invariably shipped from foreign ports, and not from English ports.

The Association disclaims that its interests are hostile to those of home mills, and says, providing customers' requirements could be met, and prices governed by competition and demand, that there would be no lack of preference on their part for the home product and even of strong efforts to push sales. The Association, however, is afraid that paper merchants, printers, bookbinders and other allied trades would seriously suffer if it were decided to place a 35 per cent. duty on paper, as foreign printers would be favoured to that extent, and naturally many publishers would consider having their books printed in England or Germany and import them as literature free of duty.

The Association has very serious doubts as to whether the proposed duty would help the paper industry, and suggests steps should be taken to promote efficiency in management and every economy in manufacturing operations. Instead of protective duties, it suggests that funds should be raised by levying a surcharge, say Rs. 10 per ton, on the importation of old newspapers (25,000 tons yearly), and by reserving a sum of 5 per cent. out of the 15 per cent. duty at present realised on paper. The sources of income mentioned should be earmarked to give such relief as the paper and pulp industry needed, with certain reservations.

From the London Gazette.

PARTNERSHIP DISSOLVED.

F. Hutchinson and J. W. Hutchinson, printers, bookbinders and stationers, 15, King-street, Lancaster, under the style of John Kellett.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Baron John C. Keen-Hargreaves, Egyptian House, 170–173, Piccadilly, and lately carrying on business at 43, New Bond-street, London, journalist.

W. S. Robson, of 31, Fitz-Arthur street, Armley, Leeds, paper merchant.

London School of Printing.

Improvement of Status.

Last week's meeting of the London County Council not only adopted the Burnham Report—which provides for increases of the salaries of assistant teachers in technical schools—but also agreed to advance the London School of Printing from Group II to Group II(a). This alteration of grade means a recognition of the increased importance of the London School of Printing, and it also involves an increase of salary for the principal. The salary of the principal of a Grade II school commences at £850 and rises by increments of £50 to £950, whereas the salary of the principal of a Grade II(a) school commences at £850 and rises by increments of £50 to £1,060.

With regard to the success of the London School of Printing, it may be pointed out that this year the whole of the medals presented by the Worshipful Company of Stationers have been secured by students of the School. Again, Leslie Arthur Grover and William James Burrows obtained the first prizes and silver medals in the Press and Machine and Composing sections of the City and Guilds of London Institute examinations, while James Shand obtained the second place and silver medal in the Machine work section. In addition to the above, James Shand and H. F. Paroissier were successful in obtaining high places in the practical competitions (open to all England) held by the Royal Society of Arts for the purpose of improving book production.

Evans, Gadd and Co., Ltd.

Successful Athletic Sports.

The second athletic sports of Messrs. Evans, Gadd and Co., Ltd., manufacturing stationers, of Exeter, were held at St. James's Park, before a large number of friends and visitors The results were as follows:—

Throwing cricket ball: R. Townhill. 100 yards handicap: 1, Tucker (scratch); 2, Townhill (8 yards); 3, Blackmore (scratch). Ladies' race: 1, Miss Came; 2, Miss Shaw; 3, Miss Baker. Tug-of-war (male): Mr. Pring's team. Egg and spoon race: 1, Moore; 2, Blackmore; 3, Miss Oatway. Jockey race: Pritchard and Blackmore. High jump (male): 1, Tucker (4 ft. 6½ ins.); 2, Bradford (4 ft. 6 ins.); 3, Cox (4 ft. 5½ ins.). Wheelbarrow race: 1, Snell and Kelland; 2, Yeo and Matthews. Tug-of-war (ladies): Miss Baker's team. Quarter mile handicap: 1, Tucker (scratch); 2, Torr (scratch); 3, Townhill (25 yards). Sack race: Milton. High jump (ladies): 1, Miss Redwood; 2, Miss Came, Three-legged race: 1, Pritchard and Hole; 2: Miss Shaw and Miss Manley. Veterans race. 1, Yeo; 2, J. Lee. Relay race: Team No. 2.

Tea was provided during the interval. Arrangements were ably carried out by Messrs. Tucker and Trevelyan. The Misses Pollard and Rew were responsible for the refreshments. A most enjoyable afternoon's sports concluded by Mrs. Southerden presenting the prizes.

THE August *Pearson's Magazine* is a special holiday number, and is filled with interesting matter eminently suitable for the holiday-maker's entertainment.

John Dickinson Fire Brigade.

Following closely on their recent successes at the South Midland District Meeting held at Edgware by the National Fire Brigades' Association, the John Dickinson Fire Brigade have added to their laurels further successes at the National Fire Brigades' Association Tournament and Camp held at Torquay, July 18th to 25th. They have again won the Mitchell and Butler's Grand Aggregate Shield for the fourth year in succession, and the fifth time in all, thus creating a record for the number of times the Shield has been won by one brigade. This undoubtedly speaks well for the consistent efficiency of the Brigade when consideration is taken of the variety of the drills which are counted in this competition, they scoring 5,904 points out of a possible 6,000.

Their further successes are:—

Apsley Mills Brigade.

Junior Manual, 1st prize, Shield; time, 43⅘ seconds.

National Motor Pump, 2nd prize, Cup; time, 80 seconds.

Combined Motor Pump, 2nd prize; time, 92 seconds.

National Escape, 2nd prize; time 64⅘ seconds.

Four Men Ambulance, 2nd prize: 89 per cent. marks, possible 100 per cent.

Steamer Turnout, 3rd prize; time, 41⅘ seconds.

National Manual, 3rd prize; time, 46 seconds.

One Man Manual, equal 3rd prize; time, 33⅘ seconds.

One Man Ambulance, 4th place; 92 per cent. marks.

Best kept Tent, equal 2nd prize.

Mitchell and Butler's Grand Aggregate Shield.

Croxley Mills Brigade.

Steamer Turnout, 1st prize; time, 35⅘ seconds.

One Man Manual, equal 3rd prize; time, 33⅘ seconds.

Dewar Motor Pump, 3rd prize; time, 41⅘ seconds.

Chinese Paper Umbrellas.

Details concerning the manufacture of paper umbrellas in Foochow, which is an important centre for this class of product, appear in a bulletin issued by the Chinese Government Bureau of Economic Information. The framework and handle of the umbrella are made of bamboo and the shade of tissue paper, painted with tung oil. When the framework is sewn with cotton yarn or human hair tissue paper is put on top, one layer over the other, and tung oil at the same time applied evenly. The tissue paper is not strong in itself, but once tung oil is applied it becomes sun and waterproof. When the shade is completed the whole is coloured and painted.

When the umbrella is completed it is opened and placed in a dry place to hasten evaporation, which takes about a month before it is ready for packing. The price for a common umbrella ranges from 30 to 50 cents; an improved lady's parasol from 60 cents. Umbrellas for export to other ports in China are usually packed in big cases of about four hundred pieces each, and those for America and London in small cases of one hundred and fifty to two hundred pieces each. Exports to America have advanced considerably in recent years.

CANADIAN NEWS-PRINT IN SOUTH AFRICA.—According to the schedule of preferential rebates of duty issued by the Union of South Africa, news-print in reels or in the flat exported from Canada to South Africa receives a rebate of the whole duty, viz., £1 10s. per 2,000 lb. This rebate is the same as on news-print of British manufacture entering the Union.

THROUGH Messrs. Wardill and Gilbert we have received a unique and useful mirror paper weight, with perpetual calendar, which Billeruds Aktiebolag, Safflle, Sweden, are sending out to their friends. This circular device has the mirror on one side and the calendar on the other, so that each can be referred to in turn. The date for any week, past, present, and future, can be known by the simple turning of the wheel which represents the weight. Altogether a handy and useful ornament.

The Indian Paper Market.

The Agitation for a Protective Duty.

The evidence given before the Tariff Board by local paper mills appealing for an imposition of a protective duty of 10 to 20 per cent. on all imported papers (except newsprint), in addition to the revenue duty of 15 per cent. at present levied, has been published from time to time in this journal.

A strong protest has been made against the application of Indian paper mills by the Calcutta Paper Trades' Association, a body mainly composed of wholesale dealers in home manufactured and imported papers. It is contended that the imposition of a duty representing 30 to 40 per cent. would be injurious on general and economic grounds. The lack of earning capacity on the part of the home mills is attributed to the slump in trade which has affected the paper industry throughout the whole world, and not from any dumping. It is also suggested that the unfavourable position of home mills may be due to mismanagement and the lack of expert and technical knowledge.

A close examination is made of the papers produced by Indian mills and imported papers, and the conclusion arrived at is that the former may be considered suitable where finish and appearance are of no account and that the preference for imported papers is due to improved appearance and finish. It is admitted that the local mills have recently endeavoured to improve quality by adding imported sulphite to grass pulp, but this is qualified by the statement that "an impression created by 30 to 40 years of inattention to market demands cannot be wiped off within a short time."

The Calcutta Paper Traders' Association, after a survey of the whole range of the productions of local mills and the competing imported qualities, emphasies its firm belief that the imposition of protective duties would not confer the advantages local mills anticipate, but would lead to very injurious effects, direct and indirect. The necessity of an improved classification of imports is urged, as present returns are indefinite and misleading. The general conclusions of the Association are: (1) That country-made papers are, in many respects, not of the standard quality, and are unsuitable for the various purposes required by customers; (2) that the effecto f the duty would transfer only a small part of the trade to the local mills; (3) that inferior grades of imported paper would come in to fill up the gap.

The Association ridicules anything in the nature of dumping. The difficulties of the local mills are attributed to over-production and internal competition.

In reference to a statement made that some English manufacturers are foisting German papers on the Indian market as English after changing wrapper and label, the Calcutta Paper Traders' Association is of opinion that such cases must be too rare and isolated to deserve serious consideration. It is recognised that German and Scandinavian papers come through English mills (export departments) and houses, but they are invariably shipped from foreign ports, and not from English ports.

The Association disclaims that its interests are hostile to those of home mills, and says, providing customers' requirements could be met, and prices governed by competition and demand, that there would be no lack of preference on their part for the home product and even of strong efforts to push sales. The Association, however, is afraid that paper merchants, printers, bookbinders and other allied trades would seriously suffer if it were decided to place a 35 per cent. duty on paper, as foreign printers would be favoured to that extent, and naturally many publishers would consider having their books printed in England or Germany and import them as literature free of duty.

The Association has very serious doubts as to whether the proposed duty would help the paper industry, and suggests steps should be taken to promote efficiency in management and every economy in manufacturing operations. Instead of protective duties, it suggests that funds should be raised by levying a surcharge, say Rs. 10 per ton, on the importation of old newspapers (25,000 tons yearly), and by reserving a sum of 5 per cent. out of the 15 per cent. duty at present realised on paper. The sources of income mentioned should be earmarked to give such relief as the paper and pulp industry needed, with certain reservations.

New Inventions

Envelope Making.

Apparatus for removing waste portions 12 from envelope and like blanks 11, which may be fed in the form of a web, or separately, as invented by the Smithe Machine Co., Inc., comprises a finger 17 which is pivotally and slidably mounted in a sleeve 36 and has an orbital movement A B C D, so that the waste portions are pressed downwardly through a slot in a table 15 and between slowly moving belts 58, where they are nested before being discharged into a receptacle 57. The stem 35

FIG. 1.

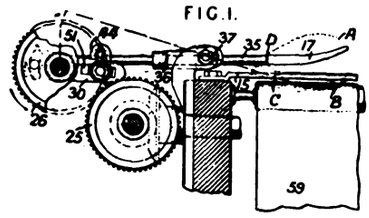

FIG 5.

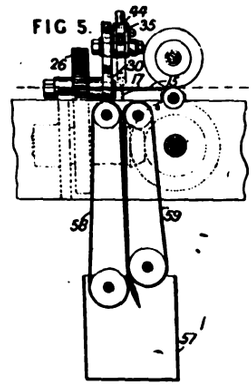

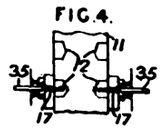

FIG. 4.

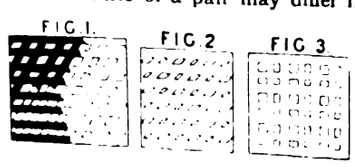
is adjustably mounted in a block 44, which is itself adjustably mounted in a slot 51 in a crank arm 30 driven by gears 25, 26. The arm 30 has a pin-and-slot connection with the gear 26, and the sleeve 36 is mounted on an eccentrically adjustable pivot 37 to vary the depth of travel of the finger 17. After its downward stroke, the finger 17 is withdrawn so as to clear the blank on its upward stroke. Independent devices may be mounted so as to remove waste from each side of the blanks, as shown in Fig. 4.



Non-corrosive Printing Inks.

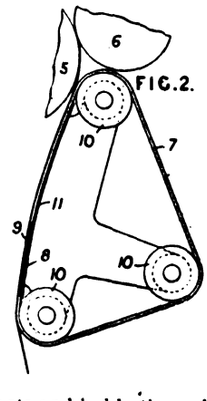
An invention by the Holtmann and Co. Ges. Alt. relates to colours or inks used in printing from engraved cylinders which contain as an additional ingredient, for obviating corrosion of the cylinders and colour rollers or doctors, a viscous hydrocarbon of high molecular weight, such as the highest fractions of mineral oils and the viscous fractions of tar oils and tars. Other bodies such as waxes and paraffins may be added to increase the viscosity. A viscous organic acid, such as oleic acid, may also be added in the case of colours having a starch thickening. A medium such as heavy benzine may be added to prevent frothing.

Half-Tone Screens.

A half-tone screen, as patented by Mr. A. Schulze, consists of two sets of intersecting lines, one or both sets being formed of regularly recurring pairs of lines. The space between the lines of a pair may differ from

FIG 1. FIG 2 FIG 3

that between the pairs, the lines being of equal breadths, Figs. 1 and 2, or of different breadths, Fig. 3, or the lines may be of different breadths separated by equal spaces. A separate plate may be used for each set, the plates being cemented in contact or with an interposed layer, or the two sets may be drawn on the same or on opposite sides of one plate. The screen may be formed by recesses or furrows filled with an opaque or a non-actinic transparent substance, or the lines may be drawn on a coloured enamel spread on a glass plate, the enamel being then burnt in. Two lines may be drawn simultaneously, using two diamonds, or one line may be drawn in one direction and the other on the return. The screens have advantages where double exposure methods are employed, and are adaptable to any required special graduation of the negatives as for example for the taking of the red colours in a three-colour autotype or for the special requirements of offset printing.



Collotype Printing Surfaces.

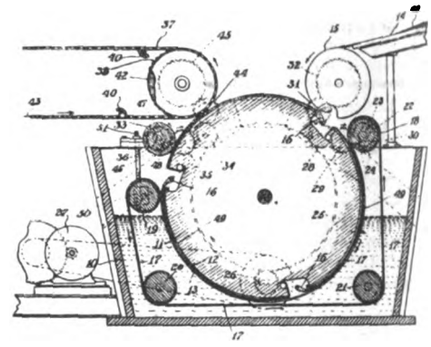
In this process, which is patented by the Akt.-Ges. fur Anilin-Fabrikation, a collotype printing surface is produced by sensitising with bichromate a layer on a suitable support of gelatine or like colloid which is wholly or substantially unhardened and which may contain a fine-grained material such as barium sulphate, drying the sensitised layer at a temperature some degrees lower than the melting point of the original colloid layer, exposing under a negative, and washing in moderately warm water of about 20–25 degs. C. Grain is produced in the exposed portions. In an example, gelatine with a melting point of 31 degs. C. is dried at about 28–30 degs. C.

Register in Multicolour Printing.

Mr. C. F. Dausmann has patented an invention whereby in printing by means of a multicolour printing press having a number of printing couples, the web, in passing between spaced printing couples, is subjected to induced electrostatic charges to hold it against lateral deviation. An endless blanket 7 in running over rollers 10 rubs against a fixed convex metal plate 11 so that an electrostatic charge is generated in the blanket,

FIG.2.

which attracts and holds the web of paper in register. The blanket consists of a heavy sheet of canvas 8 faced on one side with rubber 9 or a highly frictional rubber composition, and is located in the space between the upper and lower printing couples 5, 6. The blanket supporting rollers 10 are carried by a frame adjustably mounted in the frame of the press, as described in Specification 221,084. The blanket is moved over the metal plate 11 at the same speed as the paper web moves between the printing couples.



Paper Wetting Machine.

An inventoin described by Mr. R. W. Barker and communicated by the American Bank Note Co., relates to a paper wetting machine for conditioning paper for use in the making of inked impressions thereon, the machine being particularly adapted for rapidly conditioning high grade papers such as are used in making impressions from engraved, intaglio or undersurface printing plates.

The liquid bath which may be either ordinary water or water containing chemicals to prevent fermentation of any of the surface finish of the paper which may go into solution, is contained in a water-tight tank 10. The backing cylinder is shown at 11, and in the form of the invention shown, supports the two blankets 12 and 13 extending about the cylinder in superimposed relation, suitable gaps or recesses being formed in the cylinder and between different portions of the blankets for the reception of gripper mechanisms.

The paper is fed from a feed shelf 14 by a feeding mechanism 15 of any well-known type, gripper mechanisms 16 upon said cylinder receiving each sheet so fed. Said cylinder has three gripper mechanisms 16, but the number of such mechanisms is a mere matter of choice, as determined by the dimensions of the cylinder and the maximum size of the sheet to be dampened by the machine. The endless blanket co-operating

Fig. 1.

with the blankets 12 and 13 is indicated at 17, and the guide rollers therefor at 18, 19, 20 and 21. The rollers 18 and 19 are for bringing the blanket 17 into the desired engaging relation with the cylinder 11. The rollers 20 and 21 are positioned within the tank toward the bottom for guiding the blanket 17 from adjacent one of these rollers 19 to adjacent the other roller 18 or guiding the return reach of this blanket 17 and causing it to pass through the liquid bath, so that it arrives at the starting point of its co-operation with the cylinder 11, constituted by the contacting line between cylinder 11 and roller 18, in a fully soaked condition; and by the pressure exercised by the roller 18 and continued by the blanket 17 throughout its travel to roller 19, moisture is not only forced into the paper, but also laterally and at the rear thereof into the blankets 13 and 12. The moisture so transferred to the blanket 13 and assisted by the liquid the blankets 12 and 13 may absorb at their exposed edges in their passage through the liquid bath, will filter and spread over the whole extent of the blanket, being assisted in this to some extent by the squeeze roller and more particularly by the absence of pressure when travelling along the upper arc or inoperative part of the revolution of the cylinder extending from the squeeze roller 33 to the roller 18. It is evident that thus the blankets 13 and 12 will receive only a certain limited amount of moisture, sufficient, however, to moisten the surface of the paper in contact with blanket 13.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE is no sign of improvement in trade as yet; and just at present the combination of hot weather and holidays is not calculated to create a boom in paper. Maybe there will be a fresh atmosphere toward the back end of the season, but nothing much can be expected before then. In particular there is a very serious depression in the tub-sized and fine paper section, the demand for this class of paper having fallen very low. For this the only explanation is that trade generally is downright bad and paper is being used and bought strictly to requirement. There is no question here of foreign competition, because in this class of paper home mills have the market to themselves.

* * *

IT would be both interesting and instructive to ponder carefully over the reasons for our monopoly in fine papers. Granted that we are not equalled by Continental papermakers in the manufacture of tub-sized grades, it yet remains that some very fine lines are made in three or four neighbouring countries, and existing conditions are certainly favourable to the foreigner in regard to price. Further investigation would focus attention on the value of the name or brand of the paper, for here the foreign maker is placed at a distinct disadvantage. If he adopts an English name and sets out to sell the product through a series of merchants or agents, the foreign origin of the paper would speedily become obvious and there is undoubtedly a strong prejudice among fine paper users against foreign adoption of English names.

* * *

THERE is nothing to prevent a merchant fixing a brand name of his own to a foreign-made fine paper; but he would have to shoulder the burden of large stocks covering a wide range of English sizes and substances. He would be very fortunate to turn his stocks over in such time as to make the venture worth while. All of which leads us to think that there is a vast amount of business value in a name, especially when it is in the form of a watermark as well as on the label. The time will certainly come when all English made paper will be named and a much greater percentage of it watermarked. In one sense this would be a reversion to older methods, because the bulk of printing and writing papers were watermarked fifty years ago.

* * *

IT may be said with some truth that the most rare thing to be encountered in the paper trade is the real salesman. There are plodders, triers, consistent callers, order collectors and an army of moderately good men who have experience and the support of their houses to help them maintain and sometimes develop a satisfactory sales record. The really successful salesman who possesses the faculty of selling paper, working up new ground, or improving the results from old ground is comparatively rare. Not many representatives of paper houses are able to strike out for new big business on their own initiative. A lot of them do not know an opportunity when it faces them, because they are not blessed with instinctive vision. Others have methods of approaching or handling their customers and prospects which are not calculated to inspire confidence, and occasionally breed a cold disregard. Then, finally, although a host of other things could be said, there is little deep knowledge of paper and its relativity among the paper salesmen of to day.

*

MANY readers will be in disagreement with us over the foregoing paragraphs. Of this we are assured, and yet we are certain that almost every board of directors in the paper trade will subscribe to the view that their greatest difficulty is to find a salesman of outstanding ability. For our own part, we believe that the three elements indispensable in the make-up of the successful salesman are personality, paper knowledge and enthusiasm. If conclusive evidence is desired of the scarcity of salesmen capable above the average, nothing better can be brought forward than the fact that high salaries are waiting in many directions for the type of men that can earn them.

House Built of Newspapers.

The first house in the world to be built of newspapers is to be found in the Pigeon Cove section of Rockport, Massachusetts, where a "paper" bungalow has been erected by an enterprising Cambridge man, Mr. Ellis F. Stenman.

The real origin of the innovation can be traced to Mr. Stenman's habit of saving his daily newspapers, which came to occupy an alarming proportion of his cellar space.

Being a practical man with rather an inventive turn in his makeup, Mr. Stenman decided to experiment. If he could compress his thousands of newspapers, something might be done which would solve the whole problem regarding both the newspapers and the bungalow he had long wanted.

In all something like 25,000 newspapers have gone into the walls of the Stenman bungalow. The walls are made of boards 6 ins. wide and $\frac{3}{4}$ in. thick. These boards are made up of 52 thicknesses of paper pasted on each side, folded and pressed in a two ton press for twelve hours, and then dried. After these strips had been nailed to the frame of the house they were covered with diamond-shaped shingles made of 20 thicknesses of paper, glued, folded and pressed in the same way as the wall boards. Coats of varnish were finally applied until the surface had a shiny appearance.

The experiment has apparently been very successful, as the bungalow withstood several heavy rain and wind storms.

A De-Inking Process.

An invention communicated to Mr. T. O. Hughes relates to an improved method for removing stains of ink, fruit, etc., from paper and to a stable and relatively inexpensive compound which can be used for this purpose. In the complete specification it is described as a one fluid eradicator, which, it is claimed, has a rapid and complete action. The compound is a mixture of two solutions, one of which acts as an oxidiser, while the other solution (which is of a nature not to be oxidised by the first named) acts as a decolouriser for the material resulting from the action of the oxidiser.

The oxidiser is a solution of a hypochlorite of an alkali metal, preferably sodium. This solution should be fairly strong and a 10 per cent. solution has been found to be practicable.

Ordinary hypochlorite is generally too alkaline in its reaction and enough dilute hydrochoric acid should be added to make the solution faintly alkaline, as tested with litmus paper. The other fluid is a solution which will not be oxidised by the hypochlorite and which has the property of forming a white or very light-coloured precipitate in its reaction upon the salts produced by the hypochlorite.

For this latter purpose two salts have been found useful in solution, namely, the pyrophosphate and the metaphosphate of an alkaline metal. The pyrophosphate in saturated solution may be used in the proportion of one part of the pyrophosphate solution to three of hypochlorite solution. The metaphosphate, in four or five parts per cent. solution may be used in the proportion of one of the metaphosphate solution to four of the hypochlorite solution These proportions are by volume and they may be greatly varied without departing from the invention, which is not limited to the proportions stated.

By using an excess of the above-described mixture and leaving it for a while upon the spot or line to be eradicated, the precipitate formed by the hypochlorite and phosphate and stain may be washed away and removed as well as being decolourised, especially where the ink contains organic matter.

Carbon inks and vanadium inks are not affected by this compound.

BIGGER BUSINESS

will result if your overseas trade is developed. The "British and Colonial Printer and Stationer" SPECIAL EXPORT ISSUES provide the most economical method of obtaining forceful representation throughout the world.

Started nearly forty years ago, these special issues were almost instantaneously successful, and to-day "The British and Colonial Printer and Stationer" stands pre-eminent as the printing trade journal, carrying the message of British Print throughout the world.

Without exceeding the bounds of modesty, we can legitimately claim that this journal has made the export departments of certain firms, whilst it has increased the overseas business of its advertisers generally.

It is not for us to presume to instruct supply houses their method of doing business—we can only give you the experience of our advertisers:—

> "It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your Journal has contributed towards this export business.—C. B., Ltd."

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	East Indies.	Canada.
India.	West Indies.	United States.
South Africa.	China.	South America.
	Japan.	

The next Special Export Issue will be published on

SEPTEMBER 10th, 1925.

One of our representatives will be pleased to call upon you at your office, and at your convenience. He is entirely at your disposal for expert advice as to space, copy and lay-out.

Good Printing as a Factor in Direct Mail Advertising

By J. CROWLESMITH, J.P.

(Director of Hazell, Watson and Viney, Limited, London and Aylesbury.)

Everyone must appreciate the splendid spirit of idealism which to-day inspires the men engaged in the advertising profession, whether that idealism is viewed from the standpoint of the man who produces and desires to sell the goods, the expert advertising agent, the magazine or newspaper proprietor, the printer or the purchaser of the goods so advertised. These diverse interests are, after all, mutual, and the higher we place our ideal the better will it be for all parties.

But, after all has been said for idealism, there is only one test in advertising—does it pull? Does the kind of advertising adopted enable the producer to reach the desired public and sell his goods? Is this business man, whose money we are spending, receiving value for his cash? It is this test—and this only—that we must apply in every case, and as we consider the particular form of advertising known as Direct Mail we shall see that—given certain conditions—it really does meet this acid test as it reaches the very individual the producer aims at—every time.

The purpose of this address, then, is to consider, very shortly, what I venture to describe as one, at least, of those vital conditions that make for sure success.

A Middle-Class Breakfast Table.

Let us look in for a moment at the breakfast table of a middle-class home. The post has just come in, the master has sorted the letters and handed over to his wife those addressed to the lady of the household, together with any he thinks will interest her. Now watch as she hurriedly slits open the letters. Some contain attractive brochures, others circulars—the booklet at once gets home. Daintily prepared, an attractive coloured cover, the inside opening (as the lady hurriedly glances through its pages) shows by nicely got-up illustrations, the latest styles, etc., surrounded by well-written letterpress. The whole brochure, by its arrangement and good printing, at once wins the woman who in home life is the head of the household. She realises it is worth studying carefully, and the booklet is put on one side to receive that attention its attractiveness deserves when the master of the house has gone off to his business, the children to school, and quietness falls upon the household.

Before you brush this illustration hastily on one side as a fancy picture, remember that at least 75 per cent. of the goods you advertise interests the woman. Proud of her home, as every British housewife is, fond and careful of her children, ever mindful of her husband's welfare, she is always scanning "print" for those thousand-and-one things that deal with health, ideal home life, labour-saving suggestions, etc. I repeat, these things cover at least three-quarters of the advertising that passes through your hands. If then, you have secured the interest of the woman in the home your advertisement has commenced to "pull," and more often than not sales result.

The Right Advertising Material to Mail.

But it is a mere truism for me to say direct mail advertising will be an utter failure unless you mail the right material. Let us, then, consider the character and quality of the advertising matter to be mailed.

It must me obvious that any money expended in direct mail advertising will be largely wasted unless the matter sent through the post is made attractive in every possible way. To reach this very desirable end the advertiser—be he ever so expert—must depend upon his printer. Our American friends have long realised this fact, and on the other side of the Atlantic we find printer and advertiser working in active co-operation in the interest of their common clients—the producer and the purchaser—with the result that some of the finest material for mail advertising is being turned out by the printing presses of the United States. It is for this self-same community of interest in Great Britain that I am now asking.

We ever need to bear in mind one fact: the average woman is to-day cultured and thoughtful. Whether thrifty or not every housewife seeks value for her money, and it is therefore essential if her attention is to be secured and held that the printing you send to her home should be attractive both in its style and its quality; should be to the point; and should, in its truthfulness, be reliable.

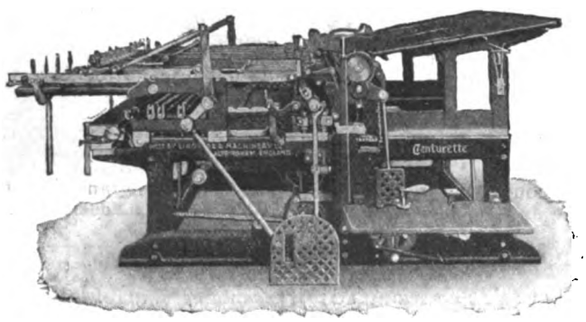
Brains and Careful Thought must go with Good Printing.

All printed matter sent by mail advertising should be carefully thought out and planned—both in its style and its contents. It does not in any way compete with Press advertising, but is rather its auxiliary. It is essential for conveying to the purchaser the full nature or character of the goods you offer. I note with satisfaction that many of our large advertisers have already realised this fact. The increased space available in the booklet enables the whole truth about the goods to be told by their producer, and the complete story is set forth in a way it is impossible for the newspaper advertisement to compete with. Hence its "pulling power."

But let no advertiser allow himself to be tied down to stereotyped styles or sizes. We need to learn the art of adapting ourselves to meet our clients' needs. To be bound to one size booklet is to court disaster. "Get up" is everything. Colour should be introduced with care and careful taste. New ideas, new types, drawings that are both original and striking, shapes which may be odd in themselves, but by their very oddity catch the eye. A write-up which compels its reading—and, above all, a quality of printing which appeals by its good taste and tone—all these things, as well as many another, should be commandeered in the service of the man who produces goods to sell and who looks to us for that service which will enable him to reach his purchasing public. How, I ask, can this service be better rendered in its completeness than by the advertiser and the printer working together to provide it?

Let me remind you that the printers of to-day have as a body caught the idealism of the advertising expert. We have our own artist and designing departments; we are constantly planning ideas and lay-outs for just that class of booklet which attracts the woman in the home, or for appeals aimed at the sterner business interests of the nation.

There are, of course, many useful kinds of material for mailing besides booklets. The folder with its snappy appeal; the dainty circular; the large, well-got-up postal card. All these are alluring and available. I hear of one advertiser who proposes to issue his announcements in book form, bound in cloth case, as he argues the woman will then keep the list on her bookshelf, and hence he secures in the form of a reference book a continuous advertisement.



All I have said about the booklet applies with equal force to these and every other kind of printed advertising material you desire to mail—good printing is ever essential in the interest of the producer.

Is Good Printing Too Expensive?

You answer, good printing is expensive—and I plead guilty. It is bound to be the case. Quality spells skill—and skilled, brainy workmen must be paid. But think!

An Address delivered to the Direct Mail Advertising Session at the recent British Advertising Convention, Harrogate.

Digitized by Google

It was not an easy matter to design a printing press to give both high speed and good quality, but it was achieved by the designers and builders of the Centurette—the two-revolution press which prints up to 3,000 impressions per hour and delivers its sheets either with printed-side-up or fly delivery, whichever the printer orders. It is made in the same works, and by the same skilled engineers, as the Miehle, at Altrincham in Cheshire.

Size for size,
the fastest two-revolution press is the

Centurette

LINOTYPE AND MACHINERY LTD.
9 KINGSWAY, LONDON

No advertiser takes expensive space on hoardings and then fills that space with cheap and unattractive posters.

Good print is never too expensive if it is effective.

I suggest to you it is not good business from your clients' standpoint, with the present extravagant charges we have to pay for postage, to incur that heavy cost—to provide carefully prepared address indexes of the people the producer desires to reach—and then, having secured this result, to hand over to the man or woman so reached a common-looking, badly printed booklet, circular or folder.

From the standpoint of real business this is simple madness, and results in wasting both your own efforts and your clients' money. We need to remember, cheap pamphlets, produced on common paper, carry with them into the home life you have reached at great expense an idea of cheapness, and tend to stamp the goods advertised as being equally as poor in quality as the printed matter which has been used to push them.

A Community Partnership in Service for the Producer.

Both the advertising expert and the printer are mutually interested in the success of the producer's appeal; both aim at giving the business man—whose money they are spending—the best possible service. The success of his approach to the public means increased business all round—hence it is essential that interests so interdependent upon each other should work in complete harmony, should act in perfect co-operation, should, in fact, be partners with the one aim of assisting in the mutual client's success by giving complete and efficient service.

A Great Industry.

Hence, in the name of the great printing industry, I offer to the advertising profession a real partnership in this realm of joint service, and, I would add, a partnership in no mean trade; a partnership which, if accepted, must inevitably prove of great importance to the interests you serve.

The printing industry ranks as eighth in importance in the United Kingdom. I talk of partnership and no competition. The advertising expert, if you will allow me to say so, has justified his existence and established his reputation, and as a trade we are glad to work with him in every way. We place at his disposal—brains, capital, plant, and skilled workmanship.

The total amount of capital invested in the general and periodical printing industry is approximately £110,000,000; the annual turnover is something like £130,000,000; while the wages and salaries paid in this great industry amount to £45,000,000 per annum. It is estimated that there are 200,000 skilled and 60,000 semi-skilled operatives engaged in the printing trade, and out of this total there are probably only some 20,000 women operatives.

This, then, is the service I offer for the advancement of your clients' interests.

A Future for Direct Mail Advertising.

Anyone who has studied this question—especially in America—must come to the conclusion that direct mail advertising has a great future in this country. Sooner or later the Government will be compelled to review the present high postal rates and will see (as the American Government has already seen) the futility of making postage

FLAT BED OFF-SET.

Have your Litho converted by the Flat Bed "Off-set" Specialists and make your Short Runs pay.

Digitized by Google

so expensive that it not only retards the circulations of our magazines but by its heavy cost prevents the development of this most useful form of communication between the producer and purchaser.

It is true it is advertising and business, but it is advertising of a nature which is educative in its effect. Its success brings business to the producer, but it also adds to the health, thrift, and well-being, as well as to the comfort and enjoyment of the people of our land—and its success promotes trade and lessens unemployment. A reduction then of the high cost of postage cannot but prove beneficial all round.

I invite you to work side by side with the great and splendidly organised national Federation of Master Printers of this country, and an additional result will be that on this important and urgent question of postal rates we shall sooner or later win the desired victory. This will give a tremendous impetus in direct mail advertising, while the combination of interests I have outlined—all desiring to serve our age and generation in the department of business life into which we have entered—will reach its full fruition, and each section, the producer, his expert advertising representative, the printer, and the purchaser will realise to the full the profits which naturally follow successful and brainy enterprise.

Paper for India's Printing.

Tariff Board's Recommendations.

Important news is forthcoming from India. In the first place, the Tariff Board, which recently held a long investigation, has issued its recommendations, and in the second there is an official report on the treatment of bamboo.

The Tariff Board makes recommendations for the investigation of the possibility of the creation of an extensive manufacture of paper pulp from bamboo.

Stress is laid on the steady diminution of the world's supplies of coniferous woods and the increasing demand, and it is pointed out that, as papermaking material from wood becomes increasingly expensive, dearer paper is inevitable. It has been proved possible, the Board says, to make excellent paper from bamboo, and it therefore recommends that the Government should provide the capital to enable the existing Indian Paper Pulp Co. to increase its output from 2,500 to 5,000 tons yearly.

The Board further recommends that in place of the existing 15 per cent. *ad valorem* duties on printing and writing paper, there should be a specific duty of one anna (1d.) per lb. on writing paper and all printing paper, other than news-print, containing 65 per cent. or more of mechanical pulp. It considers that the prospect of the development of a considerable export trade in bamboo pulp is remote, since several years will be required to reduce the cost to 220 rupees (£14 13s. 4d.) per ton, the price at which export seems possible at present.

The action of the Government on the recommendations of the Tariff Board has not yet been decided, says *The Times* Simla correspondent.

The report of the Tariff Board is likely to cause great disappointment to the interests which own mills using grass, to which the Board have refused a protective duty of 25 per cent. on the ground that the industry does not come within the conditions prescribed by the Fiscal Commission. The mills are doing badly, but the Board state that they will never be able to face world competition without protection, except in one area in Northern India, and that their disappearance would not ultimately endanger any important national interest,

Bamboo on Sound Foundation.

Mr. Pearson (Forest Economist), in a preface to an official report by Mr. Raitt, papermaking expert to the Government of India, states that experiments with the special plant of the Imperial Forest Research Institute at Dehra Dun under commercial conditions confirm the laboratory results. This, he declares, means a revolution in the methods of dealing with grass and puts the utilisation of bamboo for paper pulp on an absolutely sound foundation.

Review of Samples Received.

Art Papers and Boards.

Messrs. G. E. Kaye, Ltd., who are the representatives in this country for J. W. Zanders, the well-known papermakers of Bergisch-Gladbach, have sent for perusal a set of samples which demonstrate efficiency in the twin arts of papermaking and printing. The most striking example is a set of matt art papers and boards got up to look like a book in mediæval binding with straps and clasps. Actually the cover is a deckled edge paper, most beautifully printed in gold and colour and embossed. Giving credit where it is due, this is the sort of thing that Germany can do well, and there is much painstaking skill evidenced in the production of the matt-art folio. The papers and boards themselves cover a fascinating range of subtle tones, and their printing quality is testified to by a collection of finely printed half-tone specimens. Less ambitious but equally useful sample sets show Kreta and Krater cover papers and boards, in three substances, lining, medium and board. Both grades come within the category of speciality covers, having a two-toned mottled or repoussé effect. The Krater series has a sober colour range, while the Kreta series goes in for effect and secures its object. Finally, there is an album of printing papers ranging from hand-made antique to Japan vellum and including fine rag printings embodying diverse types of tone and character. The album is typographically treated in harmony with the papers, some reproductions of early printed work being especially well produced. Generally speaking, the paper is much better than the printing, which falls below our own standard; but as the samples are to show papers we can let that pass.

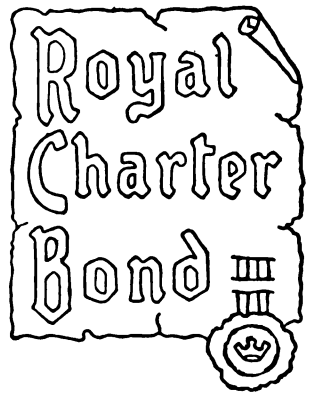
Caps and Greaseproofs.

Samples of wrapping papers received from Messrs. Davies and Royle, Ltd., of 7, Old Swan-lane, London, E.C., include "Nokia" M.G. white and buff caps, and "Tornator" greaseproofs, for which the firm are sole British agents. Both grades represent a high papermaking standard, and the prices quoted serve to explain the reason for the increasing demand for these named papers. The greaseproof has a very pleasing character, good colour and flatness, and is supplied glazed or unglazed, in sheets or on reels. Large stocks are carried, and the brand name guarantees regularity of stock and service, along with identity of source.

An Antient Craft.

This is the title given to a little sample book showing hand-made papers made by J. Barcham Green and Son, of Maidstone. To be quite candid about it, and it is not helpful to be anything else, the papers are exceedingly fine examples of the hand-made papermaker's art and the booklet is a miserable example of the printer's art. The paper samples are not properly presented; in fact, they are submerged by a disjointed *resumé* of paper history. On a sample of heavy ivory vellum we are told how bank notes are made, but find that there is no reference to anything but bank note paper. The history of the craft appears on a loan paper, which has no mediæval tradition about it. Organisation and modern law concerning hand-mades is treated on a sample of mediæval toned hand-made printing. In short, the booklet has lost its way. We can visualise a very elegant and commercially useful brochure and sample book dealing with hand-made papers costing little more than the present booklet, but carrying infinitely greater weight. And here is the crux of the whole case. A papermaker who enters the publicity arena must use professional service in just the same way that a builder must employ an architect. The compilation of booklets and production of publicity literature, like the writing of press ads., is an art requiring trained skill and long experience. Amateurish advertising is largely a waste of money and the sooner papermakers and paper merchants realise this, the sooner will their advertising standard be lifted to the level of that which exists in other important fields of manufacture and merchandise. As one well acquainted with modern publicity and printing and keenly concerned with paper, the writer can do nothing better than offer an unbiased personal service to those in the paper industry and merchanting trade who care to use it. Inquiries addressed to "Publicity Service," c/o The Editor, will receive attention.

Paper and Print for Catalogues.



Some Important Considerations.

Dealing with the subject of catalogues for overseas markets, a correspondent of *The Times* refers to the importance of print and papers, and the effect of climatic conditions upon them.

For hot countries, where strong sunlight is experienced, cover papers that will not lose their tint should be chosen; as for interior paper, it should be durable even when exposed to the moist damp heat of many tropical countries. The colours chosen for cover papers, and for ornament of the text, should be such as are generally favoured by natives of the country concerned. The Spaniards, for instance, like red and orange, but dislike soft shades such as grey. Red and gold are colours specially favoured by the Chinese. Particulars of this kind can readily be supplied by the representatives in the country affected, and it must be remembered that colour schemes which to English eyes seem crude and vulgar are often delightful to the eyes of oversea buyers.

The thickness of the paper used for the text will largely decide the cost of postage, and should therefore be kept down to the minimum consistent with permanence. In regard to typography, a safe rule is to use lettering larger and more open than is necessary in Great Britain because not so much reading is done abroad, with the exception of a few countries, as is customary here, and the eye is therefore more easily repelled by small print.

Spicers Ltd. send out another very comprehensive collection of papers, cards and envelopes, and the variety in each section is enormous and appears to cover every possible requirement of the printer, the manufacturing stationer, and retailer. There are special clearance lines from the firm's card and cardboard factories, representing a wide range. There is also an excellent assortment of printing papers, while Spicers Ltd. are also making a special feature of best English made leather goods.

Facsimile of Watermark.

Is a high-grade paper at a moderate price.

It is obtainable in White, Azure and Sepia, in a wide range of substances together with envelopes to match.

A sample book showing each colour in all substances will be sent upon application (WITHOUT PRICES IF DESIRED).

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

THE 21st anniversary of the foundation of the Printing, Bookbinding and Kindred Trades Overseers' Association is to be celebrated in the form of a dinner, concert and carnival dance at the King's Hall, Holborn Restaurant, on Saturday, September 26th. The President, Mr. J. Fleming, will occupy the chair.

POSTER COMPETITION.—A prize of 5,000 francs for a poster to advertise the work of the Red Cross in time of peace is offered by the Ligue des Societes de la Croix-Rouge (2, Avenue Velasquez, Paris (VIII), which will also buy a number of the unsuccessful designs at 500 francs each. The competition is open to artists of all countries.

MESSRS. TILLOTSONS have made an extension of the plant used for the printing of the *Bolton Evening News*, and 20-page papers can now be produced at the rate of 30,000 an hour. Previous new plant was introduced in 1922.

THE old property of the *Isle of Man Examiner*, situated in Victoria-street, Douglas, has been acquired by a new company, of which Mr. T. Radcliffe, the proprietor of *The Examiner*, is the chairman of directors. The purchase price of the property is £15,000.

THE 51st annual excursion of the Bookbinders' Pensioners (letterpress and vellum binders) will take on Saturday to Forest Side, Chingford. The party will leave the Cottage Homes, Balls Pond-road, at 9.30 a.m.

THE ten prize winners in the *Daily Mirror* Travel Ticket Competition are now enjoying holidays in New York and Paris at the expense of the well-known picture paper.

MR. GODFREY P. PHILLIPS, of the firm of Phillips Bros. and Ellis, dealers in gold, glue, etc., of 7-8, Rolls passage, Chancery-lane, London, has passed away. The business will be carried on as hitherto.

THE death is announced of Mr. Thomas Brady Merritt, of 1, Inverness-terrace, London, W., one of the managing directors of Merritt and Hatcher, Ltd., proprietors and publishers of the *Kentish Mercury* and the *Bromley Mercury*. Until a few days before his death Mr. Merritt, who was in his 71st year, had been regular in his attendance at the offices. He underwent an operation and died from heart failure.

THE death is announced of Mr. Michael Graham, who for 29 years was editor of the *Glasgow Evening Times*. Aged 78 years, he became a member of the counting house staff of Messrs. George Outram and Co. at the age of 22. In 1872 he was appointed to the sub-editorial department of the *Glasgow Herald*, and in 1886 was transferred to the *Evening Times*, of which he became editor in 1890. He retired six years ago.

THE famous Russian journal, *Pravda*, has been prohibited from coming into this country on account of its publication of what is called "The True Gospel and Life of Christ," which, according to the Home Secretary, is "so vile, so blasphemous and so bestial" that he thought it his duty to take the course mentioned.

IT is announced that the *Liverpool Daily Post and Echo*, Ltd., and the shareholders of Messrs. C. Tinling and Co., Ltd., the proprietors of the *Daily Courier* and the *Evening Express* and the Victoria Printing Works (Liverpool and Prescot), who for many years have had working agreements affecting various aspects of their business, have now entered into arrangements to secure closer co-operation, by means of an exchange of shares in their respective companies. The arrangement is a business one, and the separate identities of the two undertakings will be maintained. The consideration to be paid for the shares acquired in Messrs. C. Tinling and Co., Ltd., is based upon the existing market price of *Daily Post and Echo* shares (*i.e.*, £4 10s.).

THE publishing and warehouse departments of the *Sunday News* visited Slough for their annual outing when a round of sports was enjoyed.

AFTER an unbroken appearance during 84 years, the *Neue Pester Journal*, of Budapest, has ceased publication.

BELGIAN newspaper proprietors have been informed that the postal administration will no longer continue to carry newspapers at the present price, as it represents a loss. The charge will be raised from one centime to two centimes a copy as from January 1st next. It is expected that this increase will be borne by subscribers to the newspapers.

Trade Union Matters.

A HOLIDAY WAGES POINT.—The Hours and Holidays Committee of the Printing Trade have had under consideration the following question: Employees temporarily employed for a period exceeding four weeks, whose engagement terminated on Saturday, December 20th, claimed payment for Christmas Day, as the last two days of employment came within the pay-week in which Christmas Day occurred. The committee have replied that for the purpose of applying the Hours and Holidays Agreement nationally the week is from Monday to Saturday.

SHORT TIME WORKING AT LIVERPOOL.—The Executive Council of the Typographical Association have received an inquiry from the Liverpool branch asking if offices could work short time during periods of slackness, or whether all short time was to be prohibited. Although the branch had discouraged acceptance of short time, they had not interfered with chapels which were willing to accept temporary short time to avoid dismissals. The Council have referred the branch to the circular recently issued on short-time working, and endorsed the branch's attitude in discouraging short time.

A WAGES POINT AT BLACKPOOL.—The secretary of the Blackpool branch of the Typographical Association has asked the headquarters at Manchester if a member wholly engaged on setting advertisements for a tri-weekly newspaper should be paid more than the ordinary jobbing rate of the branch. He has been informed by the secretary of the Association that this member was entitled to receive the rate of wages paid to evening newspaper workers.

THE ANNUAL HOLIDAY PERIOD.—The Hours and Holidays Committee of the Printing Trade have been asked if a firm was entitle to insist that the annual holiday of the whole of the staff should be taken during Whit Week, although a ballot of the employees had been averse to the proposal. The committee, after consideration of the question, have announced that they do not feel called upon to express an opinion upon a matter which should be amicably arranged between the firm and the staff.

L.S.C. UNEMPLOYMENT.—According to the August issue of the "L.T.J.," the number of unemployed members of the London Society of Compositors at July 25 stood at 328, compared with 322 in the previous week, 305 on July 11th and 319 on July 4th. The 328 registered as signing the out-of-work book during the latest recorded week (July 25th), compares with 492 in the corresponding week last year, and 724 in the similar week of the preceding year. It is satisfactory to note also that the unemployment figures for all the weeks in July show a considerable improvement compared with the same month last year and 1923. Overtime worked during June by L.S.C. members reached 69,941 hours—59,075 hours in the general trade and 10,866 hours in the news department.

Belgian Printers' Strike.

A report from Brussels states that the printers' strike continues in most of the provincial towns, including Antwerp, Bruges, Ostend and Ghent.

It is now a month since the strike began, and in Antwerp all the important journals have suspended publication.

The strikers are now appealing to foreign printers for assistance, and those printers who are still working (having received an increase of wages) are each devoting on the average 35 francs (about 6s. 8d.) a week to their idle brethren.

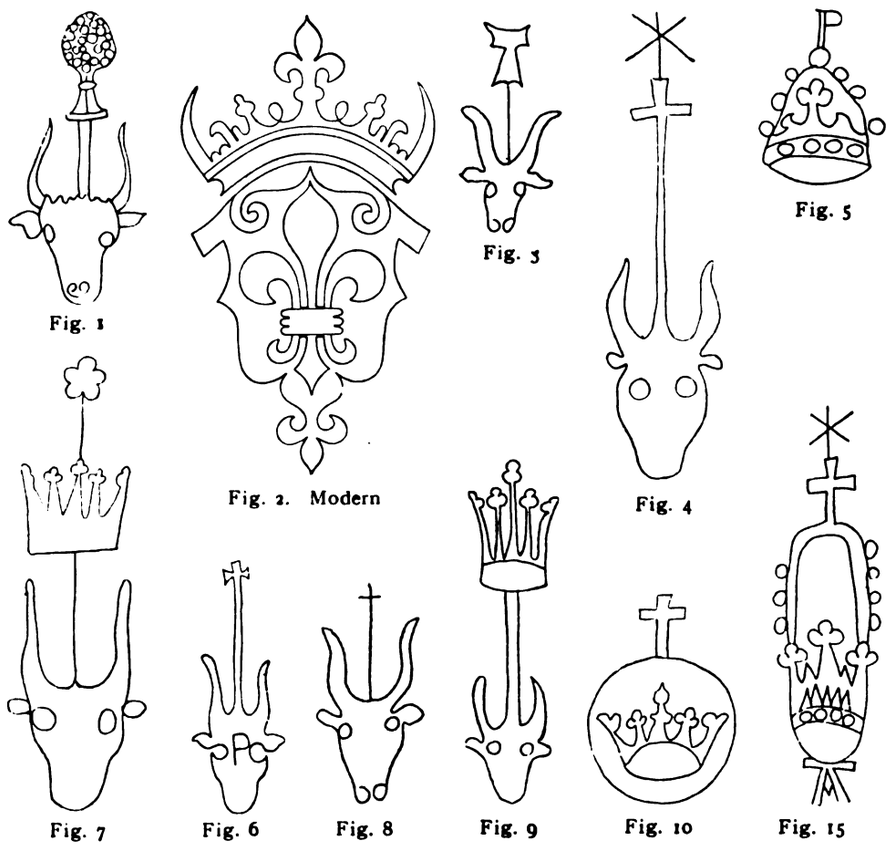
Mediaeval Watermarks.

How the Symbols of Mysticism Spread.

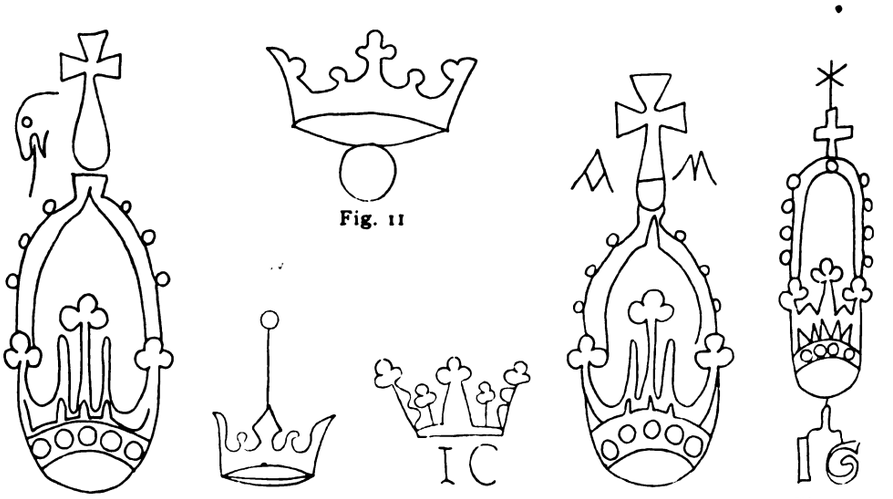


In a recent issue of "Spalding's Quarterly," above the initials, "H. B." and under the title, "Work is Prayer," there appeared an interesting article on mediæval watermarks. To the Editor of the "Quarterly" we are indebted for permission to reproduce the article and the loan of the blocks.

The conventional watermark of hand-made demy, imperial, and super-royal, is a Fleur-de-lys surmounted by a Crown from the sides of which taper two horns. The original meaning of Fleur-de-lys has previously been considered: the Horns are a curious survival of another standard mark, to wit, the head of an Ox. The first appearance of this Ox in papermark occurs in 1321: thereafter, says Briquet, who reproduces no less than 1,363 examples, it little by little became "banal" in Italy, Germany and France. A trade-mark is the immediate jewel of a tradesman's soul, and if hundreds of papermakers were simultaneously using a similar device the value of the sign as a trade-mark cannot have been great. This difficulty has been realised by previous investigators, and various theories have been put forward to account for the fact. It has, for example, been suggested that some imaginary papermakers' guild may have been affiliated with some supposed corporation of artists, and that as St. Luke was the patron saint of painters, the Ox may for that reason have become popular among papermakers. Such flimsy conjectures are rightly set aside by the judicious Briquet, who sums up his own lack of conclusions by saying, "all these hypotheses, and many others, do not emerge from the domain of supposition, and they can therefore without inconvenience be left on one side. All that concerns us is the popularity of this mark: the fact is real, the cause is unknown."

The present writer ventures to suggest that if our ubiquitous Ox be regarded as primarily an emblem rather than a trade-mark its persistent appearance in the form of a paper mark becomes comprehensible, and that so regarded the sign fits into the history of the period with the self-evident correctness of a jigsaw piece. The rationale of symbolism has always been based upon facts of very simple understanding; thus the lion typified strength, the fox cunning, the wolf greed, etc., etc., because such and such qualities were the characteristic features of certain animals. A reference to any standard work on symbolism will elicit the fact that an Ox was deemed to be the emblem of labour, this idea being obviously due to the fact that in primitive times the Ox was the puller of the plough and spent his days laboriously working.

The immense popularity of the figure of an Ox among papermakers and the knowledge that the Ox symbolised labour fit with singular propriety the fact that it was a cardinal doctrine among the industrious Puritans of the Middle Ages, that work was prayer. The character of these Puritans, whether known as Albigenses, Waldenses, Huguenots or what not, has been described as a combination of ardent mysticism, cold common sense, and tireless industry. The saying, "Laborare est orare"—"To work is to pray"—is usually attributed to the Waldenses; but the same idea was seemingly a dogma of the Albigenses, and it was equally a tenet of their successors the Huguenots. A mediæval inquisitor cited as being one of the tell-tale characteristics of all heretics the fact that "They live by their labour as artisans, their men of learning are likewise mechanics . . . they labour constantly, they study and teach." Symbols were believed to attract and radiate the influence of the Deity: some, such as the svastika, are still so regarded; there is nothing, therefore, fanciful in the conjecture that the symbols of mediæval mysticism would be carried into far countries by recurring streams of exiles. The extent to which this protracted exodus occurred from districts famous for papermaking is a fact fully known to history. It is said, for example, by Briquet, that French papermaking at one time gave employment to a million people in the province of Angoumois alone. Commenting upon the disastrous effect of the Revocation of the Edict of Nantes upon this heretical district, he adds: "Most of the paper merchants who had succeeded in concentrating the business into their own hands were Dutch or English, all Protestants. Their departure from the kingdom, by depriving the master papermakers not only of the capital they needed, but of the extended business relations requisite for distribution, paralysed the manufacture."



Immense numbers of disinherited French workmen took refuge in this country, troops more in Switzerland, and still more in Holland, a country which was described by Bayle as being the "great ark of heresy," and by Lamartine as "the asylum and the arsenal of new ideas." We are indebted to a correspondent (Major Street) for pointing out to us that it was also the descendants of French refugees who contributed most powerfully to the development of papermaking in the Czech countries, the first Czech papermill being founded in Moravia in 1520 by Charles de Zerotin, Grand Protector of the Bohemian Brethren. Our correspondent reminds us that these sectarians (rankly heretical) "were at that time the direct spiritual descendants of Huss and Zizka." He further remarks that their leaders taught the sanctity of manual labour, for which they were ridiculed by both Catholic and Ultraquist. It was similarly a leading tenet of the Franciscans that no religious meditations were to be an excuse for idleness: everyone who joined the brotherhood of Francis had to work; the brother who knew no trade must learn one, for it was part of the creed of St. Francis that to labour was to pray. Labour was indeed widely regarded as a Way of Ascent to salvation, and if our Ox watermarks be studied in detail it will be seen how explicitly these cryptic signs express this teaching. "The Ox," says Hulme in "Symbolism in Christian Art," "was emblematic of patience and strength, and in the writings of some of the early Fathers it is accepted as a symbol of Christ the true sacrifice; secondarily of prophets, apostles, and saints slain for the sake of Christ; and, in the third place, of all who patiently bear the yoke and labour in silence for the good of others."

Facsimiles (reduced to ½ size) of mediæval watermarks reproduced from *Les Filigranes*, Briquet. Fig. 2 is a modern survival.

Pictorial Sermonettes.

Each of these several variations of the

same idea may be found expressed by papermarks which were in effect pictorial sermonettes. It is a reasonable suggestion that the head of an Ox when surmounted by a cross, stood simply for Christ, the True Sacrifice. From the basic equation Ox=Work, the emblems build themselves up into more complicated ideas, only a few forms of which we can here consider.

The object surmounting fig. 1 is a Chalice or Sangrail, which was shown in a preced-

Digitized by Google

ing article to be a symbol of Salvation. The T, or Tau, surmounting fig. 3 was similarly a sign of the Elect; hence both these marks express the same idea. The Cross surmounting fig. 4 was regarded as the Cross of Lux, or Light, because the component parts of X are the three letters, L, V, X. Sometimes the Ox figures as a Way of Ascent to a Crown, in which instance the emblem might well read as "The end crowns the work," or, as a variation, "Per ardua ad astra."

The crown was a sign of such common occurrence as a papermark that it orginated the technical term "crown" still to-day in every-day use. There is a School of Thought which would certainly endeavour to identify these Crowns with such and such royalties of mediæval times. It is, however, sufficiently obvious from the few representative examples here given, that this banal mark represented a celestial Crown, and had no connection with any earthly kingdom.

The Ox, as we have seen, symbolised inter alia Apostles and saints, slain for the sake of Christ, and in this respect the Crown of Martyrdom was too often a corollary to the Ox—as it is in figs. 7 and 9. The Crown of Life was the symbol of Paul's charge: "Endure afflictions, do the work of an Evangelist, make full proof of thy ministry" (2 Timothy, iv., 5).

The extent to which heresy suffered during the Middle Ages is partially recorded in the blood-smeared pages of religious history. Dissent in those savage times meant more than the mild intellectual exercise than it does to-day, and the Crown of Martyrdom was not infrequently the fate of the reformer. To quote an Anabaptist under sentence of death: "With Paul we may say, We have fought a good fight, we have finished our course, we have kept the faith; henceforth there is laid up for us a crown of righteousness which the Lord Christ shall give unto us. And may God the Father of Mercies, the God of all comfort (on the behalf of whom it is given us, not only to believe in His name, but to suffer for His sake), who must strengthen us with His Holy Spirit, confirm and establish us that we faint not under our sufferings for the truth, but that we continue steadfast to the end."

The Crown.

Some of the watermarked Crowns are simply coronals of olive leaves; others consist of Hearts; others, again, more elaborately symbolic (particularly those lettered I.C.=Iesus Christus), express the words of Isaiah: "In that day shall the Lord of hosts be for a crown of glory, and for a diadem of beauty, unto the residue of his people." The symbolism of some of these papermarked Crowns is very complicated and interesting. We have, however, space here only to notice the letter P which surmounts fig. 5 and appears on the forehead of fig. 6. We have already dissociated ourselves from the school of thought that believes this all-popular P stood for "papier." Its actual meaning we are unable to fathom, but we hazard as a suggestion "Pax." This however, is mere guesswork.

The occurrence of the same or very similar papermarks in various parts of Europe, coupled with the fact that history records the successive dispersals particularly from France of papermaking workmen on account of their heretical opinions, seems to us to justify the conjecture that in the Middle Ages there existed something in the nature of an international labour party, whose motto was Work is Prayer. In a preceding article we dealt with emblems of the Millennium, and there is little doubt that the I.L.P. of mediæval times—a party that knew nothing of "ca canny"—was out to regenerate the world by means of work and prayer. A solitary footprint means little, but multitudes of footprints all pointing in the same direction mean something. After the final persecution and dispersion of the Huguenots, it is recorded that they formed a secret and subterranean organisation which was known as "The Church of the Desert." This was administered by itinerant apostles much in the same way as the "barbes" of previous times formed liaisons between the scattered Albigenses and Waldenses.

Paper-workers and Social Upheavals.

The historian of papermaking at Arches, in the South of France, states that secret organisations, dating from immemorial antiquity, existed among the papermaking workmen, and that these "solidly organised associations of comradeship" endured for long after the Revolution. "One is struck," says he, "by the general spirit of insubordination which from all time under the ancient régime animated the papermaking workmen. Collaborating in propagation of written thought, which, during the eighteenth century, was the main destructive agent of the existing state of affairs, until then respected, it would appear that the papermaking workmen had a foreknowledge of the social upheavals that were about to take place, and of which they were the obscure auxiliaries."

We do not suggest that the papermaking proletariat were alone in their determination to cleanse the world, or that they were peculiar in this respect: it is, however, a singularity of papermaking that its trade signs from 1300 to, say, 1700 register in unbroken sequence the tenets and aspirations of its workmen. Watermarks intelligently studied will thus one of these days be regarded as invaluable footnotes to history.

Labour Sunday Newspaper.

Reported Offer for "Reynolds's."

Col. Harry Day, Labour M.P. for Central Southwark, has approached Lord Dalziel with a view to the purchasing of *Reynolds's News* in the interesrs of Labour. The offer is said to have no connection with the negotiations recently started by Mr. J. H. Thomas.

Col. Day states that if he is able to do business, the paper will be an expression of Labour and Socialist thought, there being no doubt that the Labour Movement is in need of a Sunday newspaper that would cover the news point of view as well as voice the opinions of the people he represents in Parliament.

Lord Dalziel is understood to have replied that the price of *Reynolds's News* — which always has been Radical in its political views —would be £100,000.

The death has taken place in Liverpool of Mr. Charles Harker, who for 44 years was in the employ of Messrs. H. Stephenson and Co., printers.

The *Catholic Times*, the head office of which is in Liverpool, is being reorganised, and an entirely new body of directors appointed, says the *Manchester Guardian* The paper was founded over sixty years ago.

The *Bath and Wilts Chronicle and Herald* is to remove shortly to new premises now being built in Bridewell-lane, Bath. A new 4 reel Hoe newspaper press, weighing 43 tons, is to be installed—one of the largest newspaper presses in the provinces. The printing works, which does also a large jobbing business, will contain eleven linotypes and four monotypes. This office prides itself on its three and four-colour printing and has its own studio and block-making plant.

A Reuter's Washington message announces the death of Mr. John Temple Graves, who was editor-in-chief and co-proprietor of the *New York American* from 1907 to 1915. Besides being a noted journalist, Mr. Graves was one of the best orators in America. He was born in 1856.

Art and Advertising.—One of the outcomes of the present campaign for raising the standards of advertisement design, and one that should renew its energies, is a sumptuous album of 500 pages issued by the Press Art School, of Tudor Hall, Forest-hill. In it the director, Mr. Percy V. Bradshaw, more than justifies his title, "Art in Advertising," or the sub title, "A Study of British and American Pictorial Publicity." The work has a forward as well as a retrospective value, for in a series of chapters by experts it indicates lines of direction by which the commercial world is bound to profit.

Journalist's Suicide.—A tragic discovery was made at 68, Corringham-road, Goldersgreen, when Raymond Arthur Coulson, aged 37, a journalist, was found dead on the lawn with a bullet-wound in his head. At the inquest, Mrs. Ada Mary Coulson told the coroner that her son was a Parliamentary correspondent. A few weeks ago, she said, he had had to give up his work on account of a nervous breakdown. He was very depressed and suffered from insomnia. The coroner returned a verdict that Coulson died from a self-inflicted bullet-wound in his head, and not being of sound mind, took his own life.

Mediaeval Watermarks.

How the Symbols of Mysticism Spread.

In a recent issue of "Spalding's Quarterly," above the initials, "H. B." and under the title, "Work is Prayer," there appeared an interesting article on mediæval watermarks. To the Editor of the "Quarterly" we are indebted for permission to reproduce the article and the loan of the blocks.

The conventional watermark of hand-made demy, imperial, and super-royal, is a Fleur-de-lys surmounted by a Crown from the sides of which taper two horns. The original meaning of Fleur-de-lys has previously been considered: the Horns are a curious survival of another standard mark, to wit, the head of an Ox. The first appearance of this Ox in papermark occurs in 1321: thereafter, says Briquet, who reproduces no less than 1,363 examples, it little by little became "banal" in Italy, Germany and France. A trade-mark is the immediate jewel of a tradesman's soul, and if hundreds of papermakers were simultaneously using a similar device the value of the sign as a trade-mark cannot have been great. This difficulty has been realised by previous investigators, and various theories have been put forward to account for the fact. It has, for example, been suggested that some imaginary papermakers' guild may have been affiliated with some supposed corporation of artists, and that as St. Luke was the patron saint of painters, the Ox may for that reason have become popular among papermakers. Such flimsy conjectures are rightly set aside by the judicious Briquet, who sums up his own lack of conclusions by saying, "all these hypotheses, and many others, do not emerge from the domain of supposition, and they can therefore without inconvenience be left on one side. All that concerns us is the popularity of this mark: the fact is real, the cause is unknown."

The present writer ventures to suggest that if our ubiquitous Ox be regarded as primarily an emblem rather than a trade-mark its persistent appearance in the form of a paper mark becomes comprehensible, and that so regarded the sign fits into the history of the period with the self-evident correctness of a jigsaw piece. The rationale of symbolism has always been based upon facts of very simple understanding; thus the lion typified strength, the fox cunning, the wolf greed, etc., etc., because such and such qualities were the characteristic features of certain animals. A reference to any standard work on symbolism will elicit the fact that an Ox was deemed to be the emblem of labour, this idea being obviously due to the fact that in primitive times the Ox was the puller of the plough and spent his days laboriously working.

The immense popularity of the figure of an Ox among papermakers and the knowledge that the Ox symbolised labour fit with singular propriety the fact that it was a cardinal doctrine among the industrious Puritans of the Middle Ages, that work was prayer. The character of these Puritans, whether known as Albigenses, Waldenses, Huguenots or what not, has been described as a combination of ardent mysticism, cold common sense, and tireless industry. The saying, "Laborare est orare"—"To work is to pray"—is usually attributed to the Waldenses; but the same idea was seemingly a dogma of the Albigenses, and it was equally a tenet of their successors the Huguenots. A mediæval inquisitor cited as being one of the tell-tale characteristics of all heretics the fact that "They live by their labour as artisans, their men of learning are likewise mechanics . . . they labour constantly, they study and teach." Symbols were believed to attract and radiate the influence of the Deity: some, such as the svastika, are still so regarded; there is nothing, therefore, fanciful in the conjecture that the symbols of mediæval mysticism would be carried into far countries by recurring streams of exiles. The extent to which this protracted exodus occurred from districts famous for papermaking is a fact fully known to history. It is said, for example, by Briquet, that French papermaking at one time gave employment to a million people in the province of Angoumois alone. Commenting upon the disastrous effect of the Revocation of the Edict of Nantes upon this heretical district, he adds: "Most of the paper merchants who had succeeded in concentrating the business into their own hands were Dutch or English, all Protestants. Their departure from the kingdom, by depriving the master papermakers not only of the capital they needed, but of the extended business relations requisite for distribution, paralysed the manufacture."

Immense numbers of disinherited French workmen took refuge in this country, troops more in Switzerland, and still more in Holland, a country which was described by Bayle as being the "great ark of heresy," and by Lamartine as "the asylum and the arsenal of new ideas." We are indebted to a correspondent (Major Street) for pointing out to us that it was also the descendants of French refugees who contributed most powerfully to the development of papermaking in the Czech countries, the first Czech papermill being founded in Moravia in 1520 by Charles de Zerotin, Grand Protector of the Bohemian Brethren. Our correspondent reminds us that these sectarians (rankly heretical) "were at that time the direct spiritual descendants of Huss and Zizka." He further remarks that their leaders taught the sanctity of manual labour, for which they were ridiculed by both Catholic and Ultraquist. It was similarly a leading tenet of the Franciscans that no religious meditations were to be an excuse for idleness: everyone who joined the brotherhood of Francis had to work; the brother who knew no trade must learn one, for it was part of the creed of St. Francis that to labour was to pray. Labour was indeed widely regarded as a Way of Ascent to salvation, and if our Ox watermarks be studied in detail it will be seen how explicitly these cryptic signs express this teaching. "The Ox," says Hulme in "Symbolism in Christian Art," "was emblematic of patience and strength, and in the writings of some of the early Fathers it is accepted as a symbol of Christ the true sacrifice; secondarily of prophets, apostles, and saints slain for the sake of Christ; and, in the third place, of all who patiently bear the yoke and labour in silence for the good of others."

Surplus Printing.

COMPLAINTS are again made of what is described as unnecessary printing and publishing on behalf of Government departments. The latest complaint is in respect of what is described as an "imposing document" setting forth the number of spoilt ballot papers at the 1924 Election, with details as to whether they were rejected because they were unmarked, or void of certainty, or "because waggish voters had scribbled nursery rhymes or drawn caricatures of their mothers-in-law upon them." It is very easy, of course, to make allegations of waste without knowing all the details, but doubtless Parliament is responsible for a fair amount of extravagance in regard to its printing and its use of paper. Printers and supply houses who cater for their needs in the way of paper and type are not likely to complain of continued demand upon their resources, although perhaps, after all, due regard to economy in Government offices would help to ease the burden upon the taxpayers and industry as a whole, which in turn would help business to develop to the advantage of the printing and allied trades.

* * *

Trade Developments.

NEWS comes to hand of important developments in various areas of the paper industry. From India there arrives intelligence regarding the results of the inquiry by the Tariff Board into the application for protection by the paper and pulp industries of that country. At the same time there is issued a report concerning practical experiments which have been made with bamboo. These experiments, it is asserted, already confirm the laboratory trials and seem to suggest a very definite future for bamboo pulp. Utilisation of bamboo, however, it is anticipated, will be slow, but in view of the diminution of the supplies of coniferous woods both in Europe and in America the prospects for this comparatively new material are regarded as very hopeful. The other field whence news of projected development comes is Australia. We have already mentioned the scheme of the Amalgamated Zinc, Ltd., to turn the hard woods of Tasmania to account, and if there is any prospect of success in this direction it would seem that the efforts of the Australian company are the most likely to succeed, seeing that a fair amount of capital is available for the purpose. Here again, however, considerable time will elapse before Australian pulp and paper can become a factor in the market. At the same time British printers and all who are concerned in the industry will do well to watch the steps which are being taken, both in India and Australia. It will be noted that very urgent claims are being made for protection in both countries. The Tariff Board of India, however, does not go in wholeheartedly for protection, but it suggests certain alterations in the tariff; and in view of the immense possibilities for the production of cheap paper from bamboo recommends that financial assistance should be given to each of the two companies at Nahiti and in the Carnatic. In putting forward this recommendation, the Board holds that abundant supplies of bamboo are likely to become the basis of a considerable industry, capable of meeting the country's requirements and even providing substantial quantities of paper for export if the world prices remain at the present level. Also in the case of the Tasmanian experiment, State assistance is sought. Thus, the Amalgamated Zinc Co. are advising the Tariff Board to recommend a deferred duty of no less than 40 per cent. on wood pulp and certain classes of paper. While this duty is not to come into force until the local production is sufficient to meet a substantial proportion of Australian requirements, the mere suggestion indicates additional competition for British papermakers from what might be described as new areas of production.

Winterbottom Scholarship.

The committee responsible for the Winterbottom Scholarship Competition for those engaged in the bookbinding trade, has awarded the scholarship to Mr. E. W. Pipkin, a journeyman forwarder engaged at Messrs. Hazell, Watson and Viney, Ltd., Aylesbury.

A good number of applicants from London and the provinces sat for the test examination, and after a careful scrutiny of the papers and interviewing the candidates, Mr. Pipkin was awarded the scholarship, which means that he shall attend the London School of Printing for one year's whole-time course of instruction with a view to receiving an intensive training to prepare him to hold an executive position.

The response made by bookbinders to the invitation to sit for the competition was very gratifying and the examination proved that there are a number of young men in the trade who are well qualified to receive this course of instruction to prepare them to hold executive positions.

The Winterbottom Book Cloth Co. are to be congratulated upon being the first to found such a scholarship.

THE death has occurred at Glasgow of Mr. Hugh N. Livingstone, a well-known journalist. For the past six years Mr. Livingstone had lived in retirement. Born in 1847, he began his newspaper work in 1866 as a reporter on the staff of the *Falkirk Herald*, and before being appointed joint editor and manager of the *Greenock Advertiser* in 1874, held positions on the reporting staff of the old *Morning Journal* (Glasgow), *Birmingham Morning News*, and the *Glasgow News*. He was for a short period on the *Scotsman*. In 1876 he joined the *Evening Times* (Glasgow) staff, and continuing for 43 years, latterly acting as deputy-editor and chief sub-editor. He was in his 79th year.

Government Printing Waste.

Question of Chart-Producing for the Admiralty.

Renewed criticism is made of Government waste and extravagance in the matter of printing. The present reference is particularly to chart-production for the Admiralty. Mr. Mark Howley, in a letter to the Press this week, writes:—

"For nearly a century charts required by the Admiralty were made by private firms who specialise in this work, an arrangement which, during the war, underwent its severest test. It emerged justified, however, for there was not one instance of an Admiralty secret being disclosed. Some idea of the volume of work involved is seen in the fact that in the fiscal year 1911-12 the total expense of preparing charts was £33,086. Offset to this, however, was the sum of £31,643 realised on account of sales to the public.

"For some unknown reason, the Admiralty soon after the war, when Mr. Baldwin was Financial Secretary to the Treasury, decided to produce charts on its own account. A factory was erected at Cricklewood, costing £101,950. When this information was dragged from an unwilling Administration in March, 1923, it was admitted that a further sum would be required properly to equip the premises, already laid out on the Admiralty's usual grandiose scale. But this is not all. Deprived of their Government contracts, the firm which had for so long adequately met all requirements had to remove to smaller premises, and their old printing works still await a purchaser.

"It is not easy to discover the financial consequences of the change-over, but Government returns show that credits for work executed May, 1923, to March, 1924, totalled £38,288, yielding a net profit of £1,648. As, however, the work is not charged up on a competitive basis, and the prices at which charts are sold to the mercantile marine are monopolist prices, this profit is no indication that the work is being executed either efficiently or economically.

"About two years ago, the then Government instituted an inquiry—the report of which is awaited—into the working of Government printing offices, the Cricklewood enterprise being presumably included. The report will, no doubt, contain some revelations, although, as it will deal with general policy rather than with individual enterprises; details of this Cricklewood venture may have to be pressed for."

Printers and Advertising.

The printing industry is ready and anxious to give every assistance to encourage people to buy British goods by an advertising campaign, the idea of which has received the support of the President of the Board of Trade and was strongly advocated at the British Advertising Convention at Harrogate—writes Mr. A. E. Goodwin, secretary of the Federation of Master Printers, in a communication to *British Industries*, the organ of the Federation of British Industries. But printers wish to emphasise the value of direct mail advertising, which tends to be neglected in this country. A surprising statement was made at Harrogate, based upon carefully prepared comparative costs, that a folder in three or four colours advertising the Wembley Exhibition would be posted direct to every householder in the country at a total cost of £50,000, half the estimated appropriation required for a similar campaign in newspapers. The Federation of Master Printers has issued an elaborate folder in five colours showing "Seven Ways to Build a Business," the third effort of the Collective Advertising Campaign, designed to increase the use of direct by-mail advertising.

"THE ESTIMATOR."—Any printer who has not yet obtained a copy—or as many copies as his establishment requires—of "The Estimator" for 1925-6 should not delay in making application to the printers and publishers, Messrs. Wm. Sessions, Ltd., Ebor Press, York. This neat octavo volume is a most valuable quick reference guide to costs in the printing and allied trades. A paper-wrapped edition has been widely circulated, and an edition in leather binding is available at 7s. 6d. a copy, post free.

Florence Book Fair.

The British Section.

The Department of Overseas Trade has received a report from the British Consul at Florence on the Second International Book Fair, which was opened by the King of Italy on May 3rd, and closed on July 5th.

The arrangement of the British Section was most favourably commented upon, says the report, and great pleasure was expressed by the public at having books so placed that they could be easily handled, the comfort of the reader being well studied as compared with other sections.

As regards the selection of books, criticism was expressed that some publishers did not exercise much judgment in the selection of the class of book which might have a ready sale. For instance, many books on English cookery and a too large assortment of cheap novels were included in the exhibits. Foreigners are unlikely to buy these publications, and their room might have been better utilised by showing books of more importance and greater interest. Generally speaking, however, the British publishers were to be congratulated upon their generous response to exhibit, and there is little doubt that for variety, make, texture of paper, quality of printing and binding, the British Section held a foremost place in the Exhibition. A marked and attractive feature of British exhibits was the variety of books of every description for children. Books on architecture, furniture, art, archæology and gardening were much admired, and the various medical publications were examined with interest.

The financial side of the Fair was favourable on the whole to the British Section. Sales for the first month amounted in value to 2,000 lire, but larger orders have come in since from booksellers. Certain foreign sections apparently had fixed rebate terms in advance, and this gave rise to some complaints that replies to enquiries on the subject of rebates addressed to British firms were not readily forthcoming.

The following countries also exhibited: Italy, France, Germany, Lettonia, Mexico, Poland, Roumania, Jugo-Slavia, Siam, Switzerland and Venezuela. There was also an international exhibit of sacred books, Jewish publications, and a Japanese Section showing old prints and books. All sections were interesting, Germany's in particular being excellent, but visitors could not inspect the books, generally speaking, as they were under glass. France exhibited, among others, cheap editions of popular works, tastefully bound, but the printing and the paper were of inferior quality. There is no doubt that both the French and German Sections were doing good business.

EMPIRE PRESS MESSAGES.—The Pacific Cable Board on August 1st, reduced the rate for Press messages exchanged between Canada (except Vancouver City) on the one hand, and Australia and New Zealand on the other hand, from 5d. per word to 4d. per word, and further reduced the rate from August 10th to 3¾d. per word. The Press rate for traffic between Nancouver City and Australia or New Zealand has been reduced from 3¼d. per word to 2¾d. per word.

Personal.

SIR ALBERT SPICER, who is staying with Lady Spicer at Llandrindod Wells, was stepping out of the way of a motor-cycle and sidecar when he slipped and fell across the machine. His injuries are slight, but he is suffering from very severe shock and has been ordered several days' complete rest.

AFTER having just braved all the perils of a trip to China at an advanced age, it is strange that Sir Albert should have met with this mishap in a quiet part of Wales. Happily the accident was not a serious one, though it might well have been.

SIR ADOLPH AND LADY TUCK and MISS SYBIL TUCK are staying at Cabourg, Normandy.

MR. R. B. SIMNETT, president of the South-West London Master Printers' Association, and vice president of the London Association, is leaving with Mrs. Simnett for a cruise in the Mediterranean on September 23rd.

MR. SAMUEL HEATH SIDDERS, a member of the firm of Sidders, Ltd., booksellers, of West Ealing, was married recently at Hanwell to Miss Yates, youngest daughter of Mr. and Mrs. Robert Yates, of Hanwell.

MR. JOHN WILKINSON, of Wrexham, foreman printer in the employ of Mr. Robert Jones, printer and shipping agent, has been appointed on the commission of the peace for the borough of Wrexham.

MRS. JULIA S. MONRO, for many years a pensioner upon the funds of the Printers' Pension Corporation, attained her 103rd birthday on Tuesday.

MR. DAVID MACKIE, JUN., who for nearly three years has been assistant editor of the *Buchan Observer*, has been presented by the staff with a gold watch on leaving to take up the editorship of the *Southern Reporter* at Selkirk.

MR. HAVELOCK WILSON, it is interesting to learn from his autobiography, "My Stormy Voyage Through Life," which is published by the Co-operative Printing Society, began his career as an apprentice to a firm of printers and lithographers.

MR. W. C. POWERS leaves for his trip to America on August 26th and hopes to return early in October. He aims to visit some of the new paper mills and acquaint himself with recent developments.

THE Empire Parliamentary Association delegation to Newfoundland, which left London last Friday morning will witness the opening of the new mills of the Newfoundland Power and Paper Co., erected by Armstrong, Whitworth and Co.

MR. S. C. D. GALLOWAY (Samuel Jones and Co., Ltd.), who has been paying another flying visit to India, is expected back this month.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

D. Cohen and I. Park, advertising agents, 104, Cricket-field-road, Clapton, London, N.E., under the style of the Enterprise Advertising Co.

Edith M. Duckworth and K. Schofield, printers and lithographers, at George-street, Openshaw, Manchester, Lancaster, under the style of Duckworth and Schofield.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

G. A. A. Clowes, Pear Tree Cottage, Claygate, Surrey, and 17, Queenhithe, London, E.C., paper merchants' traveller.

Strike at Paper Mills.

Union Withdraws 600 Paperworkers.

About 600 employees of the Culter paper mills, Aberdeenshire, have been on strike since July 31st. For some time past five non-union workmen have been engaged at the mills, and the union have withdrawn their members until these five men become members of the union or are replaced by union workmen.

Negotiations are meantime in progress between the Employers Federation of Paper-makers and the union.

The Culter Mills Paper Co., Ltd, have four machines, 63, 72, 75 and 96 ins., turning out writings and fine printings, tinted, envelope, plate glazed and art papers, extra superfine pulp boards, chromo and enamels, cards, pasteboards, etc.

German Paper Boom.

Short Supplies and Rising Prices.

The Berlin correspondent of the Exchange Telegraph Co. states that the German paper industry reports a boom, with rising prices. Exports are rapidly increasing and the supply of pulp wood is short. The development of the artificial silk industry has caused a great demand for bleached cellulose.

The demand at present exceeds the supply, but production is hampered by shortage of capital for importing foreign wood.

THE National Federation of Newsagents is refusing to handle the *Stockport Observer*, a recently published weekly newspaper, because of its reduction in price from 2d. to 1d. The action is stated to be in accordance with the policy of the Federation in maintaining the present selling price of newspapers.

MR. R. ROSCOW has been appointed to succeed the late Mr. Albert Kay as manager of Messrs. Olive Bros. Ltd.'s paper mills, Woolfold, Bury. Mr. Roscow has been works manager for the firm for some years.

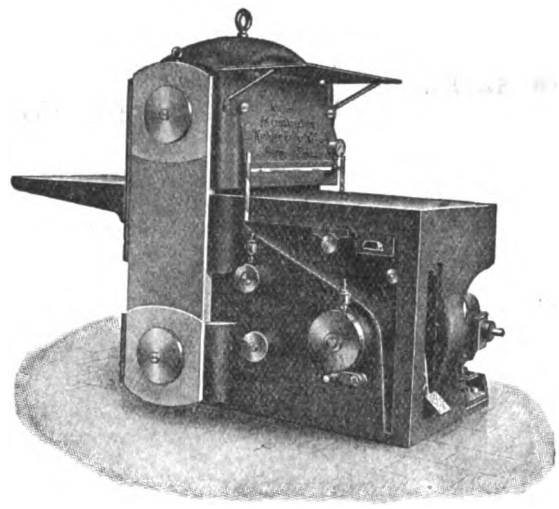
WIDESPREAD tribute was paid to the memory of Mr. Feargus Delittle, a director of Messrs. Delittle, Fenwick and Co., Ltd., printers, of York, on the occasion of the funeral. The printing industry was represented by members of the firm of Delittle, Fenwick and Co. (including Mr. J. O. Fenwick, director), Mr. A. M. Wisely (York Master Printers' Association), Mr. C. P. Clay (Messrs. Cooper, Dennison and Walkden, Ltd., London), Mr. J. T. Ellerker, Mr. T. J. Elvidge (Messrs. W. M. Stevens, Ltd., and the Yorkshire Printing Works, York), Mr. Sykes (Messrs. Ben Johnson, York), and Mr. W. Morley (York Typographical Society).

GERMAN imports into New South Wales during April included printed books to the value of £1,270.

WITH its July issue the *Caslon Circular* attains its 50th year of existence, a fine record even in the printing industry. Mr. Thomas W. Smith was the first editor and Mr. William Blades one of the earliest contributors.

The man who knows and the man who doesn't.

IF you are an authority on stereotyping equipment and have kept right up to the minute on the improvements in construction, then the Winkler Automatic Moulding and Drying Press will appeal to you for a dozen very good reasons.



The powerful and perfectly parallel impression, the automatic pressure release, the temperature control, the suction device—these and many other Winkler features will make it easy for you to understand why this press has earned its good reputation.

And if you know little or nothing about the mechanics of stereo machinery, it can be just as easy for you to understand the soundness of Winkler construction when you compare SALES—which is actual proof of greatest value. And you can make your moulding press purchase with just as much confidence as an expert.

No expert who has investigated the merits of the Winkler will order or recommend "something else" because to ignore a sure thing is the folly of ignorance.

"PLAIN AND ORNAMENTAL LETTERING," by E. G. Fooks. London: Sir I aac Pitman and Sons, Ltd. Pp. 87, 9 in. × 6½ in. Price 3s. 6d. net.

This volume is described as "A Practical Guide to Ticket and Showcard Writing, Sign Writing and other forms of Decorative Lettering," and it well fulfils the claim or purpose thus expressed. It is written primarily, we gather, for the beginner or amateur, and starts with the simplest forms of letters, indicating also the instruments and materials which the letterer requires, proceeding to more elaborate forms, and also giving an introduction to ornamental and illustrative work. The volume is profusely illustrated, information being conveyed largely by example and drawing. There is not much by way of examples of actual lettered cards or tickets, the purpose of the book being to provide the student with the elements and principles which he can proceed to utilise according to his own taste or requirements.

HEBREW TYPE SPECIMENS.—From the Oriental Department of the German firm of H. Berthold, of Berlin and elsewhere, we received recently a book of Hebrew type specimens, a handsome volume of 80 pages in large quarto. The book is of such distinguished character that it is much more than an ordinary specimen of type, and constitutes a printed work of informative and inspirational value to those concerned with Hebrew printing. On the back of the cover the firm's name is represented in Hebrew characters on a shield richly ornamented in gold and colours; and on the front is the same shield but in Roman letters, adapted to the Hebrew forms The contents introduce us to the Oriental richness of colouring, much more gorgeous than ours. The firm of Berthold has for its aim to furnish Hebrew printers with designs in the West-European style, in order to exercise a good influence on the Hebrew printing trade in general, stimulating the more artistic use of type. In the book we find all the different varieties needed for job-printing work, such as letter-heads, business cards, bills of fare, wine lists, etc., as well as splendidly executed patterns for festival occasions, which will serve the purpose of providing excellent models for adaptation. In addition to these there are bookpages with marginal notes and commentaries, here and there brought into relief by a few words or lines printed in red. By their arrangement, in which refinement and artistic feeling is shown, these pages give proof of the highly decorative value of the Hebrew characters. Messrs. Berthold inform us that this is the first of their Oriental specimen books and that Arabic, Turkish and Persian editions will follow. The volume shows much typographical ability in its design, as well as great enterprise in its production, and should do much to popularise the name of Berthold.

LINOTYPE BODONI SERIES.—A most delightful example of typographic printing reaches us from Linotype and Machinery Limited in the form of a pamphlet showing the use of the Linotype Bodoni series and Parma ornaments. It contains examples of title pages, book pages and jobbing items, together with specimens of newspaper work—text and advertisements—all conspiring to show the beauty and variety of printed matter which the printer can produce with the aid of this admirable type and decorative material. It is worth noting that Linotype Bodoni is supplied in 12 sizes from 6 to 48-point, the 6 sizes from 6 to 14 point being duplexed with italic and supplied complete with small caps.

STYLE OF THE HOUSE.—Greater uniformity and better quality of work should result from the use by their employees of the booklet, "House Style and General Information for the Guidance of Readers and Compositors," which has just been produced by Messrs. Spottiswoode, Ballantyne and Co, Ltd., of London, Colchester and Eton. Simply, but excellently designed and printed, it contains not only guidance for the firm's readers and compositors in respect of choice between alternatives of style in spelling, punctuation, etc., but also much valuable reference matter which every printer needs to have at hand.

BOOKLET ON TYPEFOUNDING.—"The Origination of a Type" ("Die Entstehung einer Schrift") is the title of No. 8 of the Book Trade Monographs issued (in German) by the Verlag des Deutschen Buchgewerbevereins, Leipzig. This neat, paper-wrapped octavo booklet of 58 pages is well illustrated and excellently produced. The author is Heinrich Hoffmeister, of Frankfurt. The price is two marks.

VERY fine examples of three and four-colour printing are again a striking feature of the *Bridewell and Bromley Magazine*, the house journal of the Grout Engraving Co., Ltd., a new copy of which has reached us. The high quality of this production helps to convey the passion for excellence which the firm expresses in its block-making.

Art and Publicity.

Quite an event of the autumn publishing season will be the appearance of a new "Studio" volume under the title of "Art and Publicity," which breaks fresh ground. Its object is to bring together every kind of artistic work (other than posters, which have been previously dealt with) that is carried out for commercial purposes—not merely that of England alone, but of every part of the world. How France sets the stamp of elegance on her commercial products, how America captures the imagination of the consumer by a novel appeal, and Germany by powerful design, all this is shown in a remarkable series of 400 illustrations, 100 of which are in colour. As nothing of the sort exists elsewhere, and the book represents the sum of the world's experience in the practical utilisation of art, it should make the strongest appeal both to the business community and to the art-loving public in general. It will be published on September 1st at 7s. 6d. in wrappers and 10s. 6d. in cloth.

ROUMANIA has made certain modifications of export duties. Printing type exported from Roumania is now subject to a duty of 5 lei pe (o kilogs.

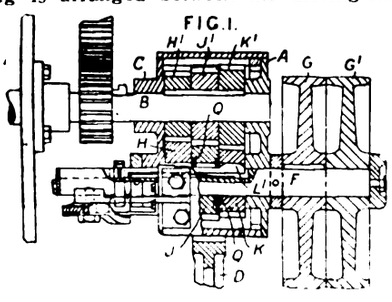
New Inventions

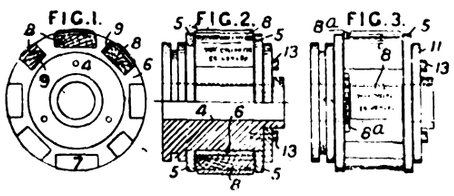
Curved Printing Plates.

An invention by Mr. L. W. Claybourne is for the purpose of bringing low portions of the printing face of a curved printing-plate into correct elevation, one or more tools, having convex operative faces, are provided for impacting the back of the plate opposite to the low portions. Prior to this operation the plate 31 is preferably placed upon a convex saddle 35, Fig. 5, and beaten by a mallet and a concave block 38 of hardwood. A proof print is taken from the plate, and the positions of low portions of the printing



surface are marked on the back of the plate which is then placed upon a concave anvil 41, Fig. 1. The tools 71 employed for pressing these portions of the plate outwardly have impact faces curved in one direction in conformity with the curvature of the plate, and these impact faces are preferably in the form of protuberances 65, Fig. 4, of small area so that the metal of the plate may enter the depressions 66 between the protuberances, thereby avoiding distortion of the printing surface by excessive lateral flow of the metal. A series of tools having different forms and spacing of the protuberances may be provided. The protuberancems may be square or may be elongated, either along the curvature of the tool or transversely thereto, and may be arranged in a single line or in a series of parallel lines, according to the shape and size of the part to be treated. If a single point, such as a letter, is to be raised, a tool having a single blunted point may be employed. The concave surface of the plate is finally shaved.

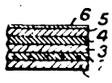
Variable Speed Gearing.



In an invention by Messrs. Charlton, in driving platen or other printing-machines, a gear-box containing variable-speed gearing is arranged between the driving-shaft

and the first motion shaft F which is fitted with fast-and-loose pulleys G, G1. The gear-box A contains a three-speed gear of the kind which driving-connection between wheels H1, J1, K1, fixed on the driving-shaft B, and wheels H, J, K, free on a first motion shaft F, is made by a sliding key having a spring-pressed extension L1 provided with bevelled ends to permit its passage past washers Q arranged between the gears H, J, K. The key is actuated by levers to change the gear, and the box A is mounted on a standard D or in the ordinary framework of the machine. The shaft B is mounted in bearings C in the gear-box. In printing-machines in which the shaft B cannot be mounted in the gear-box, the box is supported on the floor or the machine frame, and the secondary shaft of the variable gearing is geared by chain-and-sprocket or other gearing to the driving-shaft of the printing machine.

Printing on Paper Strips.



Under a patent by Messrs. Cotton, Smith and Harkness, a small printing-roller for printing on cigarette or like paper strips is constructed to receive removable printing blocks 8 which are substantially rectangular in section but have curved printing faces. On the roller 4 is placed a brass,

steel or wood ring 6 having on its periphery a number of diametrically-opposed recesses 7 in which the blocks 8 are set up with packing pieces 9. In view of the small diameter of the printing roller, the blocks are made less in depth than the usual type height. End plates 5, a ring 11 and screws 13 serve to clamp the blocks in position. Printing blocks 8a, Fig. 3, may be provided for printing at right-angles to the main blocks 8. A ring gauge may be used to set the printing faces of the blocks at the required diameter.

Printers' Blankets.

Printers' blankets, under a patent by Mr. A. F. Decker, comprise a layer of rubber or cork composition between two fabric facing layers, at least one of which is composed of wool. Two composition layers may be provided between the facing layers, and separated by a central layer of woollen or cotton fabric. The blanket

shown consists of cotton or other fabric 1, rubber or cork composition 2, woollen or cotton fabric 3, rubber or cork composition 4, cotton or other fabric 5, and an ink repellent coating 6 If the first layer is of cotton, the layer 5 is of wool, and vice versa. A suitable rubber composition is a benzol solution of rubber treated with sulphur, and the cork composition may be made up of 26 parts of ground cork, 20 parts of linseed or castor oil, 1 part of gum Kauri, and 3 parts of resin, or 50 parts of ground cork, 38 parts of oxidised linseed oil, 2 parts of oxidized castor oil, 5 parts of gum Kauri, and 3 parts of resin. The ink-repellent layer 6, which may be applied as a number of successive coats, or as a prepared film, may be composed of a nitro-cellulose solution and a "softening agent such as castor oil, lanolin, tricresyl phosphate, lard oil, cotton seed oil, etc., in which metal powders have been ground. A suitable composition is 1 lb. of nitro-cellulose, 1 gallon of ethyl acetate, and 8 ozs. of castor oil for the first coats. For the top coats, the oil is omitted, and 10 per cent. of bronze powder is incorporated in the nitro-cellulose solution.

Compressing Printing Plates.

Mr. L. W. Claybourne has patented an apparatus for compressing printing plates so as to bring all parts of the printing surface into the same plane or into the same cylindrical surface, comprises a hardened pressure surface on which the plate is laid face downward, and a compression member having a hardened operative surface parallel to the pressure surface, adapted to be brought into contact with the back of the printing plate under sufficient pressure to compress the plate and bring all parts of the printing surface into contact with the pressure surface. The operative face of the compression member is preferably formed with protuberances and depressions so that the compression of the plate is effected without distortion of the printing surface.

Moistening Paper.

An invention by Kohoylt Aktiengesellschaft seeks to avoid what are described as the drawbacks of the methods at first used for moistening paper.

It has been found that a uniform penetration of the paper with moisture can be obtained by precipitating on it moisture out of the surrounding air. This is effected by cooling the conveying cylinders by artificial means to such a degree that the paper is cooled to a temperature below that of the surrounding air, preferably below its dew-point, and moisture is precipitated on the

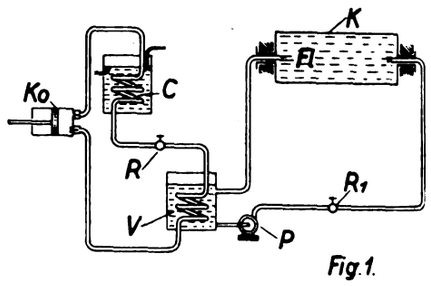


Fig.1.

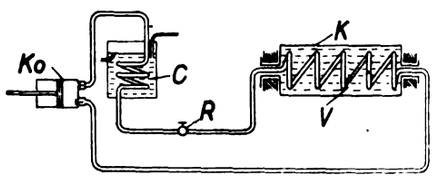

Fig.2.

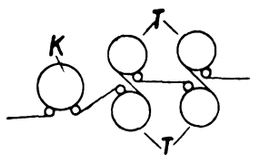

Fig.3.

paper. Of course, the precipitation takes place in an extraordinarily uniform manner. By supplying air containing a suitable degree of moisture and by adjusting the temperature of the paper it is easily possible to control the degree of moisture in the paper. Therefore, it is not necessary to rewind the paper and to ripen it by storing, but the paper may be prepared for the satining process in one single operation.

The cooling of the cylinders is effected by artificial means, for instance by passing through them a cooling fluid such as brine, which is cooled down by a separate cooling machine, or by placing the evaporator of a cooling machine immediately in the interior of the cooling cylinder.

An apparatus for carrying out the invention is illustrated in a diagrammatic form in the accompanying drawings.

In Figs. 1 and 2 K designates the cooling cylinder of the paper-machine Ko the compressor, C the condenser, V the evaporator, R the control valve of a cooling machine.

In Fig 1 F designates the cooling fluid, for instance, brine, which is supplied by the pump P to the cooling cylinder, the temperature of the cylinder K and the paper thereon being regulated by means of the valve R^1.

In Fig. 2 the evaporator V is shown arranged in the interior of the cooling cylinder K.

Fig. 3 is a diagram showing the disposition of the paper-machine, K designating the cooling cylinder and T the drying cylinders.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

FOR the moment the danger of a coal strike with all its attendant reaction upon the industrial life of the country has been averted. The last big stoppage in 1921 cost Great Britain £200,000,000, at a low estimate. The next one will cost more because of the growing tendency of labour to unite in these matters. It is devoutly to be hoped that a peaceful settlement will be found.

* * *

CONDITIONS remain customary (if that is an acceptable term) in the paper trade. Prices are also unaltered, although there have been signs of a slight easing in the direction of super-calendered and M.G. poster printings when quantities have been in question. The most remarkable thing in these quotations is the difference in price quoted by various merchants for the same papers, often enough when the paper comes from the same mill. It may be possible to standardise sizes, weights and contents, but uniformity in price is apparently beyond the bounds. Even the printers have not yet devised ways and means of standardising prices, except on paper, accepting this remark in a single sense.

* * *

AN instance of curled paper came under our notice the other day which serves to emphasise the desirability of knowing all the facts of the case before pronouncing decisions or making complaints. A stationer engaged in ruling up some bond paper expressed his dissatisfaction with the stock owing to its behaviour. What was actually happening was that perfectly flat paper went into the machine and emerged curled up round the edges. With any knowledge of paper at all it should be readily appreciated that ruling ink is wet, that a heavy pattern imparts much moisture to the side of paper ruled, that this side will expand slightly and push against the other side which remains normal, producing curl. Under intelligent supervision, the ruled paper would be given a fair chance to dry out, thus removing the curl; but if a high stack of paper is made and allowed to settle, further trouble might with some degree of assurance be anticipated Other things could be said to the paper-ruler who helps to make paper troubles, were it not that he might look askance at comment from the manufacturer's side.

* * *

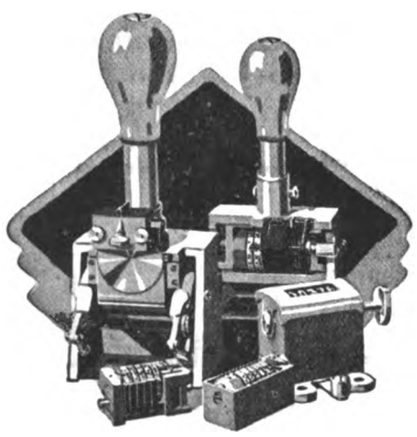
IN connection with the paper standardisation arrangement, the Master Printers' Federation has produced a price conversion chart giving equivalent rates for 480, 516 and 1,000 sheet basis accompanied by the cost per 100 and per 10 sheets. The sheet is issued at 6d. with a reduced rate for quantities, and during the period of transition it should prove an indispensable help to all those whose daily routine includes estimating, costing or the invoicing of paper.

* * *

WE have yet to see the first definite evidence of the new standards in practice. Necessarily it will take time to get the system under way, and in the meantime there will be a certain amount of confusion. We cannot quite understand why paper merchants have not taken the opportunity to circularise their customers announcing their policy or mode of procedure. Printers who keenly desire to order their future stocks of paper according to the new system are naturally waiting to know whether they can be accommodated. In the meantime they will keep their buying down in order to speedily eliminate stocks made up on the old basis The sooner merchants announce their ability to supply standardised paper, the sooner will the more progressive paper users think about replenishing their stocks. On the other hand, merchants may rest assured that there are quite enough printers and stationers with sufficient lack of appreciation of standardised paper to account for all their stock which is made up for selling under the old methods. Later on these gentlemen will be a bit of a nuisance.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.



BRITISH INDIA.

An Indian firm established in the Bombay Presidency for 25 years is anxious to negotiate with British firms wishing to develop the sale of stationery, etc., with a view to undertaking their agency for Bombay and territory served therefrom. (Reference No. 127.)

UNITED STATES.

A commission agent in Minneapolis desires to act as sales representative for British manufacturers of stationery, playing cards, etc. He is a British subject and is prepared to act on a commission basis only. (Reference No. 148.)

THE death has occurred at Clach-lan, Cults, Aberdeenshire, of Mr. Alex. Johnston, who carried on business as an oil, colour, chemical, and paper manufacturers' supplies merchant in Aberdeen. He was 59 years of age, and was the last surviving son of the late Mr. John Johnston, paper manufacturer, Culter Mills. Mr. Johnston served his apprenticeship as a papermaker, but later went into the business of supply merchant.

BIGGER BUSINESS

will result if your overseas trade is developed. The "British and Colonial Printer and Stationer" SPECIAL EXPORT ISSUES provide the most economical method of obtaining forceful representation throughout the world.

Started nearly forty years ago, these special issues were almost instantaneously successful, and to-day "The British and Colonial Printer and Stationer" stands pre-eminent as the printing trade journal, carrying the message of British Print throughout the world.

Without exceeding the bounds of modesty, we can legitimately claim that this journal has made the export departments of certain firms, whilst it has increased the overseas business of its advertisers generally.

It is not for us to presume to instruct supply houses their method of doing business—we can only give you the experience of our advertisers:—

> "It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your Journal has contributed towards this export business.—C. B., Ltd."

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	East Indies.	Canada.
India.	West Indies.	United States.
South Africa.	China.	South America.
	Japan.	

The next Special Export Issue will be published on

SEPTEMBER 10th, 1925.

One of our representatives will be pleased to call upon you at your office, and at your convenience. He is entirely at your disposal for expert advice as to space, copy and lay-out.

Write us to-day!

Calendars as an Advertising Medium.

By N. HILLS PATTERSON
(The Hills Press Ltd., Sunderland).

When I first went to business, some thirty years ago, the calendar trade in this country was in rather a poor way. It is true that there were calendars on the market reproducing good pictures, by Royal Academicians and others, but the great bulk of the calendars produced were of poor quality and distinctly vulgar and inartistic in their production, and a large proportion of them were imported from Germany and the U.S.A. It was the day of the grocer's wall calendar with big pictures in chromo-lithography, mostly either florid landscapes or sentimental productions highly coloured both in fact and in fancy. Some of the artistic calendars on the market were from American houses, but even these, and those from the British firms, were far from the standard we have now reached, both as regards picture and the all-important mounting and general get-up.

I cannot give you the actual date at which British firms first produced stock calendars, but Messrs. Forman, of Nottingham, have a copy of a stock calendar hanging in their office, dated 1885, and have also a photo of a calendar printed in colours for a Nottingham customer, dated 1873.

It is the claim of certain firms in the U.S.A. that they originated calendars, but 30 years ago they were importing a good deal more from England and Germany than they were exporting. Many of the pictures which were reproduced by British firms at that time were so appreciated in the States that others were obtained at a later period from the same British artists, for reproduction as calendars in U.S.A.

Within the next ten years there was no progress as far as British houses were concerned, though the florid wall calendar had already commenced to wane in popularity. The American houses of Osborne, Murphy, and Knapp had, however, improved in all directions and were really sending us first-class calendars.

It was about 1905 that British firms began to wake up to the possibilities of advertising calendars and to profit by the example of the American firms, gradually improving their article, and fifteen years ago we had very big rivals to the American houses, notably amongst them Bemrose, of Derby, and Forman, of Nottingham. The German-made calendar had ceased to be a serious factor, for one reason because the German firms had failed to understand the British market; for obvious reasons I shall refrain from going into any detail on this point.

Since the War, British houses have multiplied and their productions are no longer second to those of the American in any way; the work now turned out in this country is of a very high artistic order, excellent pictures when pictures are used, the finest of colour-printing by all sorts of processes, while the letterpress or die-work and the mounting are equally good. The American houses have been forced to withdraw from our country or to combine in order to hold any market at all, the imported calendar is well on the decrease and the home-made calendar is now supreme. I have already mentioned Bemrose and Forman, but I do feel that I would also like to pay tribute to the work turned out by Messrs. Pulmans, and there are quite a number of other firms all doing the finest work.

While, therefore, we may say that our progress has been satisfactory and the present state of this part of our business is good, with the output of advertising calendars and the demand for them undoubtedly increasing, we must not be satisfied to merely stand still. The German houses and other foreign houses are now looking at the possibilities of our market and its particular needs, and I have this year had many samples sent to me of foreign calendars. Nothing I have as yet seen is at all equal in artistic merit to British work, and the Britisher still holds his own, but we must go on improving our article and keep at the top.

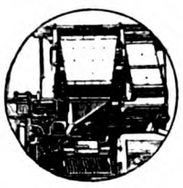
After this brief historical survey, I propose to divide my paper into two parts, the first dealing with what may be called the stock calendar, which is sold from a sample and merely has the letterpress matter altered for each customer, and the specially-made and designed calendar.

The Stock Calendar.

With the stock calendar the position as it now stands is, in my opinion, quite satisfactory. Many firms have very wide selections of the most excellent quality for customers to choose from, and I do not see that there is possibility of much improvement in this regard. Not only are all the well-known processes called upon for the pictures, tri-colour, gravure, offset, etc., but also we have such beautiful specialised processes as Derby-print, Pontoprint, and others, all called upon to give the very finest of work at very low prices. The only things that are wrong with this trade are that we might sell a very great many more than we do, and, secondly, that our representatives do not take enough care in selling the calendars and in giving the customer just the right calendar necessary for his particular business.

We do not sell *enough* because, as a general rule, the local printer is not awake to the business, he does not do it and he thinks that the ground is already fully covered by the large firms who send representatives to his town or district. He does not realise that practically every manufacturer or trader is a potential buyer and that no representatives from other parts of the country can possibly cover all these possible buyers. If in every town with a population of 100,000 there was one live printer who obtained sample sets of really good calendars from the manufacturer whose goods he fancied would suit him best, with additional printers for larger towns, the consumption would be greatly increased, to the great benefit of British trade. No business would be taken from others, but new business created—a vastly better thing, and what we printers are trying to do with our Collective Advertising Campaign.

Secondly, I do not think that anything like sufficient attention is given to the very important point of selling a calendar which suits the special trade of the purchaser, with the result that he finds that the calendar he has sent out with the hope that the lady of the house would put it in her drawing-room has found its way to the kitchen or even the maid's bed-room. To sell identical styles of calendar to a jeweller and a potato merchant is obviously wrong, and yet it is constantly done all over the country.



The "final destination" is the deciding factor in choosing or producing an advertising calendar, and the man who can rightly choose that calendar is the man who knows the circle in which it is to be distributed. This applies just as much, in my opinion, to the potato merchant as to the jeweller. The merchant seeks to advertise his good judgment and his good service, and the better calendar he gives the better may be his potatoes. He is a man of discernment and courage.

These remarks do not apply to the trade calendars which are bought by specialists to be distributed to particular trades to advertise their service. Such calendars serve a very useful purpose when they are distributed to offices, factories or shops. In these cases, what we call "commercial calendars," with large monthly or daily tear-offs attached to printed boards, are probably the most useful and most appreciated.

The representative should make it his business to find out exactly where the buyer desires that his calendar should be placed

A paper read before the recent British Advertising Convention, Harrogate.

The Flexibility of the Linotype

The two Linotype models—Model 4 and Model 6—are arranged in several styles to suit the requirements of any office. This arrangement safeguards the user against the premature purchase and upkeep of surplus eqipment; at the same time it enables him to build up his equipment as and when necessary.

THE MODEL 4 LINOTYPE can be supplied with—

One, Two or Three Regular Main Magazines, *or*

One, Two or Three Regular Main Magazines and Two Side Magazines, *or*

Three 72-Channel Main Magazines and Two Side Magazines.

THE MODEL 6 LINOTYPE can be supplied either with—

Two or Four Main Magazines, *or*

Two or Four Main Magazines and Two or Four Side Magazines.

The complete equipment of main or side magazines can be added later when the need for it arises.

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON, W.C.2

in the house or office to which it is sent, whether to the drawing-room or to the kitchen, to the office of the managing director or to the office boy, and show his patterns accordingly. Incidentally, this means a better order, as in most cases if it is pointed out that while a design is certainly cheap and effective in its way, it is not of any high merit artistically and is unsuitable for hanging up in a living-room or a private office, and that it may therefore, in many cases, be wasted advertising. Sale of a better and more costly article will result and the customer will also be better satisfied.

The buyer should choose the class of calendar which will best suit his known connection. No one can know that connection as he knows it. The larger advertiser who adopts advertising calendars as an advertising medium and supplies many agents with one standard calendar, irrespective of the class of customer served by each of those agents, is taking a heavy risk of adopting an unprofitable line of publicity. The advertiser who decides to place a very large order at the lowest possible price is degrading the standard of his advertising. He should not forget the high standard which has been attained by this specialised industry. If he realises the experience and service which lie behind the varied samples which are on sale in the stock advertising calendar trade, he will promptly recognise that a calendar costing 3d. or 4d. is much below the standard which is demanded and received by the general public to-day. "If a thing is worth doing at all it is worth doing well," and this should be the motto of the calendar advertiser.

The calendar is the direct, the personal and particular form of advertising. It is not broadcast, but it certainly has a pronounced radiation.

The amount of money wasted in unsuitable and inartistic calendars is, we all know, enormous. We all of us receive a large number of Calendars every January—how many do we keep? Only those fitted to survive, by reason of either usefulness or artistic merit; the rest are given into the factory or to our servants. But we all hesitate to throw away anything really good, and it is therefore only the really good which we should sell to our customers, and which our customers should buy.

Representatives must also be provided with a wide range of samples; all risk of selling identical designs or pictures to more than one firm in a small district must be avoided; it causes great annoyance and inevitably a lost customer.

There is one other point with this type of calendar where I do not think things are quite all they should be, the letterpress matter which is printed on them. In far too many cases this is a great deal too prominent, and people do not like it. I have heard of lots of calendars where the letterpress matter was so prominent that the receivers would not put them up in their private houses or offices—a case of wasted advertisement; we are not giving our customers calendars only as a pleasant Christmas gift, but we want our name and our calendar combined to be before them for the year. Keep the size of the letterpress down, and, where it is possible, let it harmonise with the mount and the picture into one artistic whole. Have a sample or two die-stamped instead of merely printed, show

the effect, state the advisability of the extra expense, and why, and again increased turnover will accrue.

The advertising calendar for the house or private office should not be treated as a poster.

The Specially Made Calendar.

I have dealt so far with the type of calendar which the printer cannot himself adequately handle; it is a specialised trade where he should deal with the trade houses—dealing with large quantities, buying copyrights of pictures, having their own blocks or plates, etc., a speculation the printer cannot possibly undertake. But we have quite another type of calendar, that which is specially made for a customer as an individual order, and here the printer can do the business himself. This is a sadly-neglected trade, and far too small attention has as yet been paid to its possibilities; there is business waiting to be created, and not small business either.

This business is mainly one of large orders; in fact, no one who buys in small quantities such as hundreds can afford to have special blocks and designs and date-pads made for the order; it would be too costly. But there are a great many firms who would buy by the 1,000 if they had a sound proposition put before them, and were given an idea which would advertise their own particular trade.

As examples, may I mention a few special calendars which my own firm have turned out during the past year: A foolscap folio twelve-leaf calendar, one month to a page, large block on each page illustrating parts of the works of the firm and showing the nature of the work they turn out, an iron foundry; another twelve-leaf calendar of the same kind, but illustrating twelve showrooms, each showroom showing articles of clothing suitable for the month-date beneath, for a wholesale clothier and costumier; another on a bevelled board with monthly date pad and a large illustration of a Diesel engine as a background; a daily tear-off pad with sections of steel and wire ropes on each side of it for a cable manufacturer; an art mount calendar with a view of Stationers' Hall and a brief description of the old Hall beneath it, for a manufacturing stationer; a large monthly date-pad with patterns of silk, 24 colours of them, arranged in design above the pad; a palette-shaped board calendar with specimens of colours dabbed on the palette; and many others. These are merely a few ideas to show the endless possibilities of the special calendar. This is the type of calendar which is kept and not thrown into the waste-paper basket; it does not come expensive in the quantities such firms can buy by the thousand, and the result is more than commensurate with the expense.

And this is business which any good local printer and binder can easily handle and create for himself; there is no difficulty about it. Let him fix on a firm, study out what he thinks would be right for them, get up his idea in the rough, submit it, and he will be surprised at the size of the order and the business he has created.

I have seen during the past month or so an interesting and valuable development of the daily tear-off pad; in place of a blank leaf with only the month and figure on it or in place of the usual stock motto beneath, the firm in question had got someone to select special mottoes for them; it was a rope-making firm, and they had collected 313 different quotations all of them referring to rope, string, packing, or tying in some way or other, or else to their firm or its locality; every motto was apposite to the firm's business. The idea was rather fascinating, and while no doubt the labour was great the result of *interest* was achieved.

Good Packing Essential.

One final word on the selling of advertising calendars: That of the packing. Too great care cannot be taken over this; the goods are sent out at a time of year, as a rule, when our Post Office has a most abnormal amount of goods to handle, when there are amateurs and casual labour employed, and when goods get rather carelessly handled. In any case, a calendar with its large surface, combined with its light weight, is a thing easily bent and crumpled. Point this out of your customer and advise him to order strawboards front and back for all that he wishes to send by post and not deliver by hand; it is most advisable and all means extra business once again. A bent or torn calendar is wasted money every time; it gets thrown away. This is especially the case with the daily tear-off variety, which should in all cases be packed in cardboard boxes and also have a pad of waste-paper put in to balance the heavy and thick date-pad and prevent it being rubbed loose or crooked on the mount. One day last January I received six large calendars, none of them costing less than a shilling each and two double that price, and three of them were spoilt through inadequate packing; to spend that amount on a calendar, and then fail to spend an extra penny on boards or boxes is sheer folly, and yet it occurs in a very large proportion.

The importance of the right use of the calender as an advertising medium cannot be exaggerated, and I do not feel that it is fully appreciated even yet. Look at it; for a sum of a few pence, plus a design intelligently purchased and sold, you are placing your client's name and business before his client for a whole year, day in and day out. In our Federation Advertising Scheme we attacked many thousands of buyers of printing three times over for a sum of one shilling each, and we were proud of the achievement; but the calendar beats even this hollow, and, furthermore, it is not a collective scheme but individual, advertising that particular firm's own business and product and no one else's. What form of advertisement can possibly keep a firm's name daily before his customer or prospective customer for a few pence or even a shilling or two for twelve months on end? Not even the daily Press could claim anything like such a result, no matter what they may state as to the advantages of newspaper advertising over direct mail advertising.

We have a vast amount of new business waiting to be created at our very doorsteps, a field almost without bounds; let us be up and doing.

In conclusion, I would like to express my thanks to Major Dudley Forman for the help he has given me with this paper; he is not entirely in agreement with all I have said, but I have gratefully adopted many of the suggestions he has sent me.

PAPER NEGATIVES

represent the perfect medium for black-white photo-reproduction work.

The blacks are of uniform density : the whites sharp and clear-cut. There is an entire absence of streaks, pin-holes, or any of the usual troubles.

The Typon Process does not call for exceptional treatment or highly skilled labour. No special equipment is required.

Typon material is inexpensive, sold in convenient quantities, and adds to the resourses of the Litho and Planographic Printer while greatly reducing his working costs.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Printing, Bookbinding and Kindred

TRADES OVERSEERS' ASSOCIATION.

Discussing the Winter Programme.

The August meeting of the above Association was held on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C. Owing to the unavoidable absence of both Mr. J. Fleming and Mr. A. G. Aves (president and vice-president respectively), Mr. J. A. Esler (the Association's hon. technical representative) was unanimously voted to the chair. As was to be expected, the holiday season was responsible for a rather smaller attendance than usual.

The minutes of the previous meeting having been disposed of, several items of correspondence were submitted, amongst the more important letters receiving attention being those from the following: Messrs. F. C. Peacock, W. G. Lowe, E. J. Cattell, F. J. Hess and G. A. Esler.

The letter from Mr. Esler reviewed the work of the committee of the Winterbottom Scholarship and the examination held in connection with the scheme. Amongst other things it stated that twenty-one candidates throughout the country had sat for the examination, and that the examiners were Mr. J. R. Riddell, Mr. George Bell (London manager of the Winterbottom Bookcloth Co., Ltd.), and the writer of the letter. Testimony was paid to the strict fairness displayed throughout the examination, and a very good opinion was formed of the general character of the candidates and of their suitability to eventually hold executive positions in the bookbinding industry.

As mentioned in last week's issue, the successful candidate was Mr. E. W. Pipkin, a journeyman forwarder engaged at the Aylesbury branch of Messrs. Hazell, Watson and Viney, Ltd.

The secretary read a letter proposed to be sent to the Federation of Master Printers in connection with the negotiations the Association is conducting with the Federation on the notice question.

On the proposition of Mr. J. Lee, seconded by Mr. S. J. Wills, the contents and form of the letter were unanimously endorsed by the meeting.

The next business was the consideration of the winter social programme.

The first of these events discussed was the coming-of-age celebration, which is to be held at the King's Hall, Holborn Restaurant, on Saturday, September 26th. Each of the stewards for this function (Messrs. A. J. Jones, A. H. Smith and A. E. Walters) spoke of the excellent arrangements that were being made. Each speaker expressed a strong desire that the members should endeavour to worthily mark this important milestone in the Association's history.

Owing to the proximity of the coming-of-age celebration on September 26th, it was decided that the annual smoking concert should be held on the third, instead of the first, Tuesday in October, to be preceded as last year by a supper to be held at the Talbot Restaurant.

It was also agreed to hold the annual bohemian concert and ladies' night, the date for this event to be Saturday, November 28th, subject to the secretary being able to book suitable accommodation.

The next item on the agenda was entitled "An Informal Talk on Current Topics," members being invited to bring forward grievances of any kind from which they may be suffering. No response, however, was made to this invitation.

The secretary then announced that Mr. Saunders, the editor of *Amateur Gardening*, would give a lantern lecture at the November meeting on the subject of gardening.

A vote of thanks to the chairman brought the proceedings to a close.

We regret to announce the death of Mr. J. J. Vernon, of 42, Sidney-avenue, Bowes Park, who was for many years the head of the Entering Desk of Spicer Brothers. As a boy of 15 he entered the employ of the old firm of Spicer Brothers in 1862, retiring in January, 1922. The funeral took place at Highgate Old Cemetery on the 7th inst., amongst those present being Mr. J. T. Steele, director and secretary of Spicers, Ltd., Mr. H. Pritchard, and Mr. J. O. Toott. The directors of the company, and also the staff, sent wreaths.

New Composing Machines Bring New Business

¶ One of our customers tells us that the **extra** work he has been able to handle since he replaced his old, out-of-date machine with an Intertype has paid for the installation.

¶ It is a demonstrable fact that keeping a machine too long—failing to take advantage of new inventions successfully applied in the trade—is a definite source of loss.

¶ There are many British printers to whom we should like the opportunity of proving that an up-to-date Intertype—the Better Machine—will quickly pay for itself out of the **extra** work its installation makes possible. If you have an old composing machine, let us discuss this matter with you. Send a card to-day—there is no obligation.

INTERTYPE LIMITED

Britannia Street, King's Cross, London, W.C.1

Set in Intertype Cheltonian Series. Border Slide No. 654.

Clondalkin Paper Mills.

Anxiety Over Their Continued Closing

Although Clondalkin Paper Mills have been closed for the past 18 months, no effort is being made to have the industry revived. Recently an attempt was made to float a company, and a prospectus issued, but it did not attract sufficient capital, says the *Irish Independent*, although under the Trades Loans Facilities Act £25,000 would have been given as a loan. It is believed, however, that the project fell through over a question of option shares. The view is expressed that it is a pity the mills should remain closed, as the machinery is of an up to date type, and the situation such as would contribute to success.

It is stated definitely, however, that in order to attain success the one great essential would be to have the management controlled by a board of experts.

In this regard an *Irish Independent* representative was informed by a prominent Dublin man interested in industrial development that the mills would be much more likely to be a success if under the management of a Norwegian or a Swede, in whose countries the industry was developed to absolute perfection.

He declared definitely that there was a future before the mills if taken over by the right people with expert management. In this connection it is interesting to note that advertisements have appeared in a Dublin paper asking for suitable sites for paper mills.

In a letter to the *Irish Independent*, Mr. Philip Scher says that paper is in error in stating that the project to re-open the plant fell through over a question of option shares. The cause of failure to open the mills was due to under-subscription by the public. Had the issue been subscribed, it was the intention to secure the best talent available to place the mills on a secure profit-earning basis. Mr. Scher agrees that it is a pity the mills should remain closed. The machinery is up-to-date, and the situation of the plant such as would contribute to success. Since the flotation was not successful, he is arranging to complete the purchase outright.

Trade Notes.

THE Manchester Envelope Co. have removed to Meco Works, Buxton-street, Manchester.

THE late Mr. John Martin Wigley, of Market-street, Lancaster, printer and stationer, left £5,717.

A FIRE at the premises of The Alma Press, West Hartlepool, which did damage estimated at £250, originated in some bales of paper.

THE Tyne Printing Works, Ltd., 22 and 24, Side, Newcastle-on-Tyne, have just acquired, by private treaty, the extensive premises in Pilgrim-street, with an area of over 900 square yards.

THE Printing and Allied Trades Miniature Bisley meeting will be held on the Ham and Petersham Range on August 29th, when the shooting championship of the printing trade will be decided.

THE late Mr. Henry Charles Anning, of Hermon Hill, Wanstead, Essex, London director of the *Bristol Times and Mirror* and its associated papers, left personal estate of the net value of £764.

MR. JAMES HALL WILSON, who has just died at the age of 70 years, had been head of the reading department of the *Daily Mirror* since the first day of the publication of that journal in 1903. His father was a newspaper proprietor in India.

MR. WILLIAM WHITE, who for over 25 years had been a member of the composing staff of the *Newcastle Chronicle*, was taken ill while out walking on Saturday, and, being conveyed home, passed away shortly afterwards. He was formerly with Messrs. Andrew Reid and Co., Ltd.

THOROUGH appreciation is being shown by the members of the National Union of Printing, etc., and Paper Workers of the Union's new convalescent Home at Filey, Yorkshire. The Home, we understand, has been practically full up with patients during the whole of the summer months.

To meet the long-felt want for some medium of intercourse between the various sections of the very large Welsh population in London, the Union of Welsh Literary Societies and the Young Wales Association have decided to publish on October 15th the first number of a monthly organ, to be known as *Y Ddolen* (the *Link*). It will be sold at 2d.

WE understand that the committee responsible for the annual gala and sports' day of the National Union of Printing, etc., and Paper Workers have decided to discontinue this event, which has usually been held about this time of the year. The trophies which figured so prominently on the sports programme of this organisation will in future be competed for at the annual gathering of the Printing and Allied Trades Charity Sports Association.

ON the invitation of the management of the *North Mail and Newcastle Daily Chronicle*, about 40 of the most prominent advertisers in the Newcastle district and their friends, assisted at Thursday night's performance of "It Pays to Advertise," at the Theatre Royal, Newcastle. Mr. W. G. Tully, northern advertisement manager of the *Newcastle Chronicle*, Ltd., acted as host and made full and adequate arrangements for the comfort of the guests.

THE death has occurred at Deal of Mr. Augustus May, who was in his 68th year. Mr. May was apprenticed to the printing trade at Deal and afterwards joined his brother in taking over a business at Highgate, where their activities included the issuing of a magazine, "The Ratepayers' Journal." The brothers were afterwards associated in enterprises at Ventnor, where they published two newspapers, and at Ashby de-la-Zouch. During the war Mr. May assisted in the composing-room of the *Hornsey Journal* offices.

MR. A. W. BADDELEY, the oldest printer in Boston, Lincolnshire, has passed away at the age of 74. The son of a Wesleyan minister, the deceased gentleman went to Boston from Malvern as a journeyman printer in 1876, and worked for the late Mr. Roberts in Strait Bargate. The business was subsequently taken over by Mr. Stubley, Mr. Roberts' foreman, and Mr. Baddeley commenced on his own account.

MR. E. N. SOMERS, secretary of the Industrial Development Association in Dublin, is anxious that the supplies of printing and stationery likely to be required in the forthcoming Senate election should be exclusively of Irish origin. He suggests that two recent instances of the use of imported letter paper printed abroad by existing senators or by business firms of which senators were the head, renders it desirable to sound this note of warning.

IN celebration of its 40th anniversary, the *Calgary Daily Herald* has published an interesting supplement giving a reproduction of its first number. The contrast between the Calgary of 40 years ago and the city of the present time is illustrated by photographs of the tiny wooden "shack" in which the first number was printed and the tall building in which the present office is housed, with a powerful broadcasting station erected on the roof, which distributes news over a large area of the Prairie Provinces.

A GOOD SPECIMEN OF PRINTING.—An excellent example of printing recently executed by the Blackfriars Press, Ltd., 17-23, Albion-street, Leicester, has just reached us from this well-known establishment. Under the title of "Regent-street, Past and Present," the work, which is quarto in size, harmoniously combines the commercial with the artistic aspects of typography, the whole of the printing having a very pleasing effect. By the use of high-quality paper, type and blocks, good printing and a careful and systematic arrangement of the display, the publication, in addition to its historical value, is a very worthy specimen of the art of the printer.

THE new evening paper which Mr. Harold Harmsworth proposed to establish at Exeter in association with his Plymouth properties, the *Western Morning News* and the *Western Evening Herald*, and in connection with which elaborate arrangements had been made, will not now be published. The staff had been engaged, everything down to the last detail provided for, and the first issue was to have appeared this month. The undertaking arrived at between the *Western Morning News* Co. and *Western Times* Co. (Exeter) in regard to the two evening papers at Torquay, which resultered in their amalgamation a few weeks ago, completely altered the position in the local newspaper world. The bulk of Mr. Harmsworth's editorial staff at Torquay, numbering about a dozen, are being absorbed as district reporters and in other capacities in connection with the *Western Morning News*. The mechanical and commercial staffs who received notice were given an additional fortnight's pay.

MR. G. W. REDFERN, formerly of Messrs. T. H. Saunders and Co. (London), has recently been appointed by the well-known and old-established firm of Messrs. Standard Products Corporation, of New York, paper manufacturers, to act as their sales manager in their office, 119, Queen Victoria-street. Mr. Redfern had some 25 years with his late firm, covering buying and selling and other departmental work. With his present firm his energies will be chiefly confined to their carbonising tissues.

Lord Burnham & Inter-Imperial Trade.

THE delegates of the British Press who are on their way to attend the Imperial Press Conference in Australia spent a pleasant day at Suva, Fiji, on August 13th, as guests of the Government and the Chamber of Commerce.

The party arrived at Auckland, New Zealand, on Monday en route for Australia, and were given a civic reception at the Town Hall. Sir Christopher Parr greeted the delegates on behalf of the Government.

Viscount Burnham said that the delegates were quite overcome by the warmth of the welcome they had received. He felt that New Zealand was the most homelike of the British Dominions. After mentioning that New Zealand did more trade with Great Britain per head than any other country of the Empire, Lord Burnham expressed the hope that one result of the conference would be to drive home the benefits of inter-Imperial trade.

After the reception the delegates were entertained at lunch by the Auckland Press, who also organised motor trips and other entertainments in their honour.

Trade Union Matters.

THE Executive Council of the Typographical Association have nominated Mr. J. D. French, the general president, for the Arrangements Committee of the Annual Conference of the Labour Party, and Mr. F. O Roberts, a member of the Executive Council, for the Executive Committee.

PAPER WORKERS AND HOLIDAYS.—At a meeting of the joint members of the National Union and Amalgamated Society of Paper Workers, held at the Trades Hall, Radcliffe, Lancs, the following resolution was unanimously adopted: "That this meeting of the joint members is strongly opposed to any alteration of the local holidays until such alteration is agreed upon by the whole of the workers in the district." The Employers' Federation of Papermakers are strongly opposed to the September holidays, and the meeting was called for the officials of both societies to report upon the meeting held in Bury by the Federation of Papermakers in regard to the holiday.

TYPOGRAPHICAL ASSOCIATION AND THE NEWSMEN'S AGREEMENT.—The secretary of the Manchester Branch of the Typographical Association has informed the Executive Council that at a special meeting of the members of that branch the local committee was instructed to take steps to prevent the agreement made on May 5th between the Typographical Association and the employers' representatives respecting the working conditions of newspaper workers from coming into operation in offices in Manchester. The secretary inquired from the Executive Council if the branch committee had power to give such instructions, and if, following such instructions, news chapels were bound to accept them. The Executive Council have informed the secretary that the branch committee have no power to issue such instructions.

Durability of Platen Machines.

Messrs. William J. Light and Co, Ltd., 36-38, Whitefriars-street, E.C.4, who are the sole agents for the "Tip Top" Jobbing Platen, write us as follows:—

Past sales records indicate that 75 per cent. of all the platens bought in 1925 will be out of the hands of the original owners in 1929, either traded, sold or junked. With each change someone takes a needless loss. To the original owner it will average 50 per cent., because he must pay such items as freight, handling charges, selling costs, etc.

Thinking people believe this is an enormous economic waste, a sacrifice to too many models, high pressure selling methods, and inefficient engineering and construction.

The makers of the "Tip Top" platen started years ago to determine why platens wore out before their time. They developed and put into operation a scientific method of determining the "endurance factor" of every part used in "Tip Top" platens. Then, by a systematic process of refinement and improvement, each part was brought nearer and nearer perfection. How certain this progress has been is evidenced by a recent investigation showing that the *life of all "Tip Top" platens then in service was many years beyond the average.*

With this accurate, fundamental knowledge, the latest "Tip Top" has been designed.

If you, too, believe that trading a platen every year or two is wasteful—if you believe a platen should give a minimum of 15 years of satisfactory, economical service, we recommend you to see the "Tip Top."

In this 15-year platen you will find economy without sacrifice of performance, low price without disappointment in efficiency or looks, great impressional strength without unnecessary weight, high speed, and the lowest upkeep cost, we believe, of any platen in the world.

PEEBLES' AUXILIARY CO., LTD. (in voluntary liquidation).—Pursuant to Section 188 of the Companies (Consolidation) Act, 1908, a meeting of creditors is called for the 24th inst. at 28, St. John's-lane, Clerkenwell, E.C.1. The notice is purely formal, as all creditors have been, or will be, paid in full.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,

Printing Revolutions.

THE daily press have been devoting some attention to that interesting photo-typesetting machine which is the invention of Mr. J. R. C. August and Mr. E. K. Hunter. A somewhat novel suggestion now made is that wireless might be employed to operate a number of these machines simultaneously all over the country. The idea of applying wireless to typesetting is not an entirely new one. We believe it has been mentioned in connection with the linotype machine, but apparently so far without practical results. Nevertheless, we are doubtless on the eve of extraordinary developments in many directions, and wireless will certainly play a great part in some of them. In regard to printing, active minds are at work in the search for simpler and less costly methods, particularly in substitution of typesetting. Of course, if success should be achieved, there would be a revolution not only in the composing-rooms of printing works, but throughout the whole of the mechanical departments. It is rather early yet to say to what extent these innovations will be put into practice; but those who are responsible for the elaborate and patient experiments which have been made, appear to be supported by high confidence. Moreover a rather widespread interest has been aroused among scientific and engineering bodies, while the authorities of the Science Museum, South Kensington, where examples of Caxton's work are preserved, have invited the inventors to provide exhibits representative of the capabilities of the machine as a permanent historical record of developments in the printing art.

Profit Sharing.

THE movement to give employees a greater interest in their work by allowing them to share in the profits has made much headway in the printing industry. Considerable success has attended the schemes which have already been introduced and the firms who have adopted them appear to have derived no little benefit. Mention has already been made of the fact that a committee of the Federation of Master Printers has submitted schemes which they suggest might be adopted. In reviewing these schemes in an article in *The Times* (Trade Supplement) last Saturday, Mr. Howard Hazell, president of the Federation, points out the benefits to be derived from profit sharing. As he says, anything that can be done to increase the efficiency of a business deserves careful consideration, and when the employees receive a share of the profits there is no doubt that they will have regard to avoidance of waste and loss of every kind. The object of all these schemes is to create goodwill amongst the employees, to increase efficiency and render better service to the customers, with the result that the position and stability of a business is improved and all connected with it benefit. It is not without good reason that Mr. Hazell declares that the crying need of the present time in all industries is for better methods of production and a higher efficiency which will reduce the costs of production and so enable manufacturers to meet the fierce world-wide competition of to-day. He asserts that the profit sharing scheme if at all successful must promote efficiency, as everyone employed in the organisation will know that waste or loss of any kind must affect the profits and reduce the sum that is available for distribution amongst the employees. At the same time, the system should lead to a lowering of costs. If lower costs can be obtained by these methods, then the need of the industry has been met, and the result has been obtained, not by reducing wages, but by greater efficiency, while the income of the employees is increased.

The Late Mr. Godfrey Phillips.

Mr. Godfrey Phillips, to whose lamented death we briefly referred last week, passed away suddenly at his house at Westcliff from bronchial pneumonia. Thirty-four years of age, he was a partner in the firm of Messrs. Phillips Bros. and Ellis, manufacturers of gold leaf, and dealers in bronze powders, etc. Mr. Phillips had acquired an extensive knowledge of the trade with which he was identified, and was held in very great respect by a wide circle of representatives of the printing and bookbinding section of the industry, with which he had been associated since he was 15 years of age.

MR. W. J. WHELAN, the secretary of the Dublin Typographical Society, has been presented by the members of the Society with a Chesterfield suite of furniture on the occasion of his marriage.

MR. GEORGE CAPEWELL, of the composing-room staff of the *Ross Gazette*, has been presented by the directors with fifty preference shares in the company on his retirement after nearly fifty years' service.

MR. JOHN WILLIAM HARVEY, a Leeds printer, has been admitted to the Leeds General Infirmary suffering from a crushed hand, which had been caught in machinery at his works.

MR. HARRY LING, the president of the Malden Bowling Club, has won, for the second year in succession, the Single-Handed Championship of this club, defeating in the final tie Mr. J. Young by 21 points to 18.

MR. C. BAKER, papermakers' agent, 83, Cannon-street, London, has extended his offices and has opened a special sale room to be devoted entirely to the high-class esparto papers and boards made by Messrs. J. A. Weir, Ltd., of Kilbagie. He will continue to supply the wholesale trade only.

THE late Mr. John Forrester, of Duneaves, Broughty Ferry, N.B., a director of Valentine and Sons, Dundee, and other companies, left, in addition to considerable real estate, personal estate in Great Britain valued at £44,859.

Digitized by Google

Government Printing and Economy.

Rebuke for the Stationery Office.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, this week addressed the following letter to the *Manchester Guardian* under the heading "Economy and Government Printing":—

"Two years ago the Government appointed a committee whose allotted duties were to consider 'the question of carrying out printing for State purposes in Government establishments, and to report to what extent, if any, it is desirable that such Government establishments should be continued in the future, as to the general conditions under which they should be maintained, and the principles on which work should be allocated to them." Colonel John Gretton, M.P., was the chairman, and representatives were selected from all political parties and officials from the Post Office and the Treasury. It is understood that this Committee has completed the taking of evidence, and, in reply to a question in the House of Commons recently, it was stated that the report would be presented to Parliament before the end of the year. In the meantime, a publication has been issued by his Majesty's Stationery Office entitled "Brief Guide to Government Publications," and this booklet gives a general description of the various publications issued by the Stationery Office.

"It is desirable that publicity should be given to the activities of the Stationery Office and that the public should know how they can obtain the information contained in the Government report; but those who regard economy as the most necessary virtue for the present Government to practise would find in this list food for thought. A more serious matter, however, is the insertion of two paragraphs in this booklet which appear to prejudge the issue referred to the Government Committee of Inquiry. The following statement appears on page 5:—

In 1824 the vote for the supply of stationery and printing to Government departments was £59,760, the staff numbering 44. To-day, 100 years later, the establishment consists of 1,718 people and the expenditure is one and a-half million pounds annually. The Stationery Office now owns its own printing press, and, although they cannot undertake all Government printing, they have been instrumental in effecting a large economy in expenditure.

"The concluding sentence is certainly open to question. It is surely for the Committee of Inquiry to determine whether the existence of the State printing works has effected any economy in the huge expenditure of this department.

"Another statement, as follows, is made on page 30 of this booklet in the reference to the high price of official publications:—

That the cost of both printing and paper is reduced to the lowest limit compatible with efficiency by the system of competitive trader in the open market.

"This, again, is a question on which the report of the Committee of Inquiry will be awaited with interest, because, on the authority of the Auditor General, in his annual report for 1921–22, it is asserted that the system of competitive tendering had been found unsatisfactory, and that suitable work was being allotted to the Government printing works in a quantity sufficient to keep the works employed to the highest degree of efficiency. I particularly desire to draw attention to this *ex parte* statement whilst the whole matter is *sub judice*, and the Committee is still considering its report.

Printers at Play.

The fourth annual sports of Messrs. King and Hutchings, Ltd., printers, of Uxbridge, Ealing, Southall and Harrow, were carried out on August 8th in fine weather and with complete success. The joint hon. secretaries of the "K. and H." Sports and Social Club, Mr. J. E. Holland and Mr. H. Hughes, were supported by a good working committee consisting of Messrs. A. C. Simmons, F. G. Hookham, V. O. Hughes, H. Wheeler, F. L. Tomlinson, J. S. King, jun., and W. Garland, and Miss E. Richardson. These had the wholehearted assistance of the following officials on the ground: Starter, Mr. H. Wheeler; judges, Messrs. C. E. King, J.P., J. S. King, B. J. Duffin, L. Fearnley, W. G. Smith, John Smith; stewards, Messrs. J. D. Robinson, A. Potter, W. H. Mott, J. Pitman, E. D. Glasgow and Miss Hook.

As in previous years the employees were entertained to tea by the directors, after which Mr. A. C. Simmons, on behalf of the "K. and H." Sports Club, offered thanks to the directors for their interest in the club in the past year, and the financial assistance which had helped to make such a pleasant afternoon possible.

Mr. H. C. Hutchings said it was very nice of Mr. Simmons to mention the kindness of himself and his wife. It was always a pleasure to see the employees.

Mr. C. E. King, J.P., the managing director, said the committee had worked extremely well in carrying out that annual event. The policy of friendship between employer and employee which "K. and H." had always fostered would, he hoped, continue from year's end to year's end. The directors were delighted to uphold to the utmost this annual function where they could be one with the other enjoying themselves as one whole family party.

At the conclusion of the sports Miss M. King (Ealing) presented the prizes, and was warmly thanked for so doing by Mr. B. Herbert.

Fire at a Printing Works.

The ground floor of a four-storied building, occupied by Messrs. James Pool and Sons, Ltd., envelope manufacturers and lithographic and letterpress printers, Upper Thames-street, London, was severely damaged by fire on Tuesday night. On the arrival of the fire brigade the ground floor, which was stored with envelopes, reams of paper, and other inflammable material, was blazing like a furnace, but they succeeded in confining the fire to the ground floor, although the upper part of the building was damaged by smoke.

Personal.

LORD RIDDELL has offered a trophy for a rifle shooting competition among journalists employed on the London and suburban Press. The competition is to take place on September 5th and 6th at Bisley. A prize will be offered for the highest score made by a member of the Press Club.

SIR ROWLAND BLADES, M.P., is among the aldermen of the City who are eligible for election as Lord Mayor of London. Sir Wm. R. Pryke, however, is the senior of the aldermen who are eligible.

COLONEL E. F. LAWSON, D.S.O., M.C., will preside at the 31st annual dinner of the Readers'. Pension Committee, which will be held at the Holborn Restaurant on Saturday, October 17th.

MR. PHILIP W. HALL, who is associated with Messrs. R. Hoe and Co., Ltd., is on a visit to England. Mr. Hall was formerly the head of the Hall Printing Press Co., the business of which Messrs. Hoe absorbed in 1924.

FOR many years the Hall Co. specialised in the manufacture of rotary lithographic and rotary offset presses, and in view of the great improvements during recent years, Messrs. Hoe are desirous that printers interested will take the opportunity of meeting Mr. Hall during his two or three weeks' stay by visiting their offices and works, Borough-road, S.E.1.

MR. S. STUBBINGS, secretary of the London Branch of the Bookbinders' Union, is at present spending his annual holiday at Weston-super-Mare.

ON the occasion of the 103rd birthday of Mrs. Julia S. Monro, for many years a pensioner upon the funds of the Printers' Pension Corporation, she was the recipient of a letter from the secretary of the Corporation (Mr. Joseph Mortimer), while Mr. W. E. Hebditch, a member of the Council, called to congratulate her.

MR. G. D. STAFFORD, who for forty years has been on the staff of Messrs. R. Robinson and Co., Ltd., printers and wholesale stationers, Newcastle-on-Tyne, and for the last 21 years has been overseer, has been the recipient of a presentation by his colleagues.

SIR ALBERT SPICER, we are glad to learn, is getting on quite satisfactorily after his recent accident, though his progress is rather slow. No bones were broken, but he is still somewhat stiff and sore from bruises.

MR. JOHN ELLIS, who has been associated with the publishing department of the Liverpool *Daily Post* and *Echo* for the last sixty-three years, has just celebrated his golden wedding. He was the recipient of many congratulatory messages, especially from his colleagues of the *Post* and *Echo*. Mr. Ellis is the oldest employee of the papers.

MR. HUGH M. JACKSON, a well-known figure in the paper, printing and stationery business in the North of Ireland, and formerly on the staff of Messrs. W. and G. Baird, Ltd., has been appointed a Justice of the Peace for Belfast.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. A boon to all users of Gold Leaf, Foils, &c.

GOLD LEAF in all shades & sizes.

RIBBON GOLD LEAF from ¼in. to 3½in. wide, WHITE TRANSFER BLOCKING FOIL in two qualities.

"FEST" specially prepared for fine work.

METAL LEAF, ALUMINIUM LEAF in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/-, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

BRONZE POWDERS 60 different shades & qualities in stock.

BLOCKING POWDERS.

EGG ALBUMEN in Flake and Powder.

GLUE (Best Scotch) and other brands in stock.

CELLULOID GOLD.

SILVER LEAF, &c., &c.

The Bookbinder

Notes and News.

Slower Demand for Bookbinding.

Trade continues to be on the quiet side in the bookbinding industry and all sections are affected by the lack of demand. Trade generally is very poor and the bookbinding establishments merely reflect the condition of the whole country. Less business in the more important industries means less call for books and stationery of every kind in every direction. Banks are not consuming book space as they did a year ago, and even then the demand was below normal Shippers, brokers and commercial houses generally are having such a quiet time that they are exercising stringent economy in the purchase of stationery. The effect upon bookbinding is that in most of the large towns the number of unemployed members on the books is very disquieting.

Suggested New Line.

Letterpress and publishers' bookbinders are perhaps not so severely affected by order shortage as those on the stationery side. The surprising thing is that there is such a steady market for literature considering the pessimistic spirit that prevails in the country. Educational development must be mainly responsible for the growing desire to possess books, and something is to be said also for the modern form of bookcase, which has had some influence upon the accumulation of books for the domestic library. Technical education is another source to which we must look for an incentive to purchase books. But, of course, the overwhelming demand is now, as it always was and always will be, for fiction, the bulk of which is bought, read and loaned until it finds a resting place in the junk store or dustbin This is all to the good for bookbinders. There is a very strong argument in favour of the cheapest possible form of case binding that can be found for that class of book which is of sheerly ephemeral interest. Why not paper-covered cases with modern pictorial or decorative treatment and no wrapper? There is room for something of the kind and it would cheapen the cost of production considerably.

Technical Bookbinding.

The Manchester College of Technology has just issued its syllabus of day vocational courses in printing, process work and photography. The courses are arranged for those who are already engaged in, or intend to enter, the printing and allied trades, and are based on full attendance all days except Saturday. Bookbinding practice is included in the curriculum and the department is equipped with modern bookbinding equipment and an up to date striker ruling machine. It is a much more difficult matter to efficiently equip a technical bookbinding department than, say, a model letterpress machine-room, and manufacturers apparently take a less keen interest in bringing their binding equipment under the practical notice of students. The one thing that the modern bookbinder needs to know more of regarding his trade is the development of machine processes. Perhaps it is because so few of the latest machines are made in England that there is so little keenness on the part of manufacturers to have their machines represented in technological equipment.

Speciality Papers.

Some beautiful samples of imitation leather surfaced fancy papers recently came beneath our notice. Of foreign origin, they represent what must surely be the high-water mark in speciality papers of this description. Primarily intended for de luxe box or case coverings, they would also have occasional use in the production of fine brochures. Crocodile and hide embossings are shown with silver and gold and mingled or self colour effects. Altogether, they are most beautiful.

The Time Docket.

Evidence from many quarters goes to show that the time docket works very smoothly in the bindery. The best results are secured where bulk times only are recorded by the men, leaving analysis of these aggregates to be made by the overseer. In one large bindery of our acquaintance the system works so smoothly that repeat orders work out with closely approximate accuracy and there is very rarely any need to question times or figures. There are still quite a large number of firms whose faith in costing methods (or is it lack of acquaintance?) is so frail that they still adhere to the old habits of hazard and guess. However, the experiments have all been made and the more progressive houses have demonstrated beyond question that time dockets and systematic costing are a practical and even simple proposition in the bookbinding department. When all binders come to realise this, there will be less need to call attention to the cut-price and profit-losing practice which is so much the present vogue.

The Story of Gold Leaf.

The story of gold leaf goes back at least as far as 1706 B.C., when it was used by the Egyptians for decorative purposes, especially on mummy cases. Homer refers to gold leaf. "The Temple of Solomon," we read, "was profusely gilt."

Pliny got down to figures of interest to manufacturers. In his house a single ounce was beaten out in 750 leaves, each four fingers square. By 1711 Parisian leaf makers from a single ounce were beating sufficient leaves to cover more than 146 square feet. Nowadays, the leaf beaten from an ounce covers 200 square feet.

In "It Is Never Too Late to Mend," written in 1856, Charles Reade describes a "she-thief" gilding in an English gaol. With adroit touch "the jade slips the long square knife under the gossamer gold leaf, which she has blown gently out of the book—and turned it over: and now she breathes gently and vertically on the exact centre of it, and the fragile yet rebellious leaf that has rolled itself like a hedgehog is flattened by that human zephyr on the little leathern easel."

"After the leaf is cut in three she dabs her hair with the brush, this contact applying to the camel hair "a soupcon of some very slight and delicate animal oil, which enables the brush to take up the gold leaf, and the artist lays a square of gold in its place on the plaster bull she is gilding."

Same Now as Years Ago.

The history of the manufacture of gold leaf is a very interesting one, and it is done to a very large extent in the same manner as it was years and years ago, machinery not having been introduced to any great extent, as in the case of other trades.

It is believed that gold beating was brought to America from England in 1807. Thirteen years later, in 1820, John Hastings, of Hastings & Co., came from England and started a gold-beating shop. This company is to-day one of only 72 firms in the United States over one hundred years old and in the absolute control of the family which founded it. It is probably the only firm in the U.S. in which the second generation is controlling the business with the passing of a century.

Thinnest Substance in Commerce To-day.

The process of manufacture as it is carried on in this shop is indeed a most interesting one. The gold is beaten so thin that the final product is 1 280,000 of an inch in thickness, and its gossamer tissues have many industrial uses besides bookbinding. A five-dollar gold piece beaten into a gold leaf would cover fifty square feet of surface, and the product is known as the thinnest substance used in commerce to-day.

Gold bars from the U.S. Mint, 999.9 fine, are alloyed with silver and copper—according to the shade desired—the standard colour being known as XX., or extra deep, which is 22½ carats fine.

A long narrow bar 12 x 1 x ½ inches is cast and rolled into a ribbon about 525 feet long. After cutting this into one-inch squares, the gold beater takes 150 pieces of the gold, which are interleaved with as many parchment paper leaves (imported from Paris) four inches square forming a packet called the "cutch." All packets are held together with parchment bands.

Beating the "Cutch."

The cutch is beaten for twenty minutes with a heavy hammer on a smooth marble block until the gold has thinned and extended to the edges. It is then taken from the cutch, and each piece is quartered. The 150 pieces have thus become 600 pieces, and these are interleaved between 600 pieces of gold beater's skin, forming a packet called the "shoder," which is four and one-half inches square.

Another beating then takes place, more careful, more delicate and more precise than the former, until the gold has expanded as far as the shoder will admit. This second beating takes about two hours. Each piece is again quartered, the 600 pieces becoming 2,400 pieces. These are again interleaved with gold beater's skin and form three packets, each containing 800 pieces, called the "mould," which is 5¼ inches square.

The leaf is now so thin and delicate that much greater care and thought must be used. The slightest change in the weather now affects it, so the beater has to use all his knowledge to keep it from breaking up or going into holes. This third beating takes four to five hours.

A "Mystery" of the Craft.

How the workman manages to beat all the pieces equally and yet beat none into holes he alone can answer. It is one of the mysteries of the craft. The finished leaf of gold is about 1/280,000 of an inch in thickness.

The cutters then trim the uneven edges from the leaves with a sharpened reed set in a tool, named a "wagon." Twenty-five gold leaves are placed in a book of tissue paper, the leaves of which have been covered with rouge to prevent the thin leaves of gold adhering to the paper. This finishes the process.

Digitized by Google

Breath Used More Than Touch.

So delicate is the work of cutting, in the process of which the breath is used more than the touch, that only about 80 per cent. of the beaten leaves are available for putting in the books, the trimmings being remelted.

Each mould skin is well cleaned on both sides with a hare's foot and white powder before it is used again, as a perfect leaf cannot be beaten unless the skins are well cleaned between each beating. A sixteen-pound cast-iron hammer is used on the cutch, nine to twelve pound on the shoder and six to eight pound on the mould.

The gold beater's skins mentioned are made from a very delicate membrane, lining the intestines of the ox, the preparation of these skins being almost wholly in the hands of one firm in London, who supply the demand of every country where gold leaf is produced.

These skins are now also used in the manufacture of balloon bags on account of their thinness, lightness, and strength. Six hundred thousand gold beater's skins were used in the construction of the giant airship ZR-2, lately destroyed.

Many Varied Uses.

While one of the principal uses of gold leaf is in the bookbinding trade for stamping the names on books and gilding the edges of them, it is also used on the edges of playing cards and for stamping the manufacturer's name on hat bands and in shoes. Another large use is by sign painters in gilding trucks, railroad cars and engines, lettering on windows and board signs of all kinds, as well as on domes and crosses. Picture frames and furniture are also gilded with genuine gold leaf.—From "Bookbinding Magazine" (New York).

Leipzig Fair.

Special Advertising Exhibits.

In addition to the ordinary exhibits at the Leipzig Fair, there is being held, during the Autumn Fair from August 30th to September 5th, a Special Advertising Exhibition in the rooms of the State Academy for Graphic Art and Book Trade, and it has been possible this time to increase the floor space for same by 60 per cent. Negotiations are also pending for stances outside for displaying advertisement clocks and pillars. By means of the well-known red arrows and pillars, much more numerous than at the last Spring Fair, a special street will be formed leading to the Advertisement Exhibition, where many interesting exhibits will enlighten the general public as to the methods and the importance of advertising. It is confidently expected that this special Exhibition, which attracted something like 60,000 visitors at the Spring Fair, will prove an even greater draw at the coming Autumn Fair.

Arrangements have been made with the Customs Authorities at the German Frontier by which, instead of baggage being examined in the usual waiting-rooms and Customs bureaux, the officials will inspect same in the train, and thus save the travellers any unnecessary trouble and delay in connection with the examination thereof.

WRAPPING OF BREAD.—Mr. Neville Chamberlain, in a written reply to Capt. Crookshank, says he agrees that the wrapping of bread is desirable in the interests of cleanliness, but he fears that the increase of price which might result if the universal adoption on the practice were made compulsory would outweigh any advantages which might be secured. He does not, therefore, intend to introduce legislation to make wrapping compulsory.

Ethics of Bookcloth Selling.

Binders' Customers Approached.

We referred in a recent issue to a practice of certain bookbinders' supply houses of getting into direct touch with the binder's customers which is arousing much concern amongst bookbinders in the United States. A resolution of protest was called forth from the Employing Bookbinders' Association of New York by the fact that certain bookbinders' supply houses engaged in the selling of cloth and imitation leather have inaugurated a practice whereby they approach the binder's customers and offer to sell them their goods at a certain price, provided said customers agree to take a considerable quantity within a fixed period. Thereafter, these customers, in giving orders for the binding of books, direct the binders to purchase for the binders' account certain cloths or imitation leathers direct from such supply houses as have made these arrangements with the customers.

Our reference to this matter brings us a letter from the London manager of Messrs. Bentley, Smith and Co., Ltd., who makes the not unexpected remark that the malpractice complained of is not confined to the United States. In England, he says, some of the bookcloth manufactures and merchants canvas publishers and supply them not only with patterns but also with prices. The matter is an important one, and one upon which a useful service might be performed by trade readers who care to express responsible opinions for publication in our columns.

Our correspondent, by the way, takes the opportunity to assure us that Messrs. Bentley, Smith and Co., Ltd., make it a rule to deal absolutely with the binder, whom they supply with pattern books for the use of his customer, the publisher. He also sends us a couple of pattern books which show bookcloths, art vellums and art canvas in a large and attractive variety of colours, qualities and finishes, all of which are kept in stock.

Paper Certificates.

Certificates in connection with papermaking classes held at the Royal Technical College, Glasgow (lecturer, Mr. Gilbert Gunn), during the session 1924-25, have been issued as follows:—

Advanced Class.

Second Class Certificate: James Fairlie Downes, 1, Sutherland-avenue, Pollokshields, Glasgow. Also gained 1st Class Certificate, Grade 1, of the City and Guilds of London Institute.

Second Class Certificate, Thomas Bain, Planting Mill, Denny.

Elementary Class.

First Class Certificate: James Kay Horsburgh, Mill House, Linwood.

MESSRS. E. A. BRISTOW AND CO., papermakers' agents, Temple Bar House, Fleet-street, London, inform us that their Dutch mill, La Société Royale Hollandaise, Maastricht, is now making vegetable parchment, and it is claimed that their quality is equal to that of the best makes.

AMERICA and Canadian interests announce their intention immediately to erect a £1,000,000 paper mill in the Greater Winnipeg district if the Dominion Government will contract with them for water-power and pulp wood rights.

Loose Leaf Post Binders for Egypt.

The Commercial Secretary at Alexandria (Mr. E. H. Mulock) reports that the Survey of Egypt, Ministry of Finance, desire to receive tenders for the supply of loose leaf binders as follows:—

(a) 1,000 loose leaf post binders for Land Book. Over all outside dimensions to be: Length, 52 cms.; width, 40 cms.; depth, 8 cms.; inside clearance, 6 cms. Capacity 200 leaves, size 50·8 by 38 cms.

(b) 2,000 loose leaf post binders for duplicata and deed negatives. Over-all outside dimensions to be: Length, 48·5 cms.; width, 30·5 cms.; depth, 7 cms.; inside clearance, 6 cms. Capacity 200 leaves size 45·4 by 29 cms.

The binders are to be in accordance with specification and firms quoting are requested to send samples with their offer.

Quotations should be made f.o.b. port of shipment and exclusive of insurance. Sealed tenders and samples must be presented to the Surveyor General of Egypt, Giza (Mudiria), Egypt, and must reach him on or before noon of the 6th October, 1925.

A copy of the specification, conditions of tender and samples of the sheets showing the shape and the position of the posts may be inspected by interested United Kingdom firms at the Department of Overseas Trade (Room 41).

ALLARDYCE & Co. Ltd.
PAPER
· RULING ·
MERCHANTS
85 Southwark St. London.

is a business which requires absolute precision. The work must be correct in every way.

When your order is received we place at your disposal highly skilled workmen who are running the most modern machinery.

With prompt service and first-class workmanship thus guaranteed, you are sure that you have the BEST.

We will rule your own paper or execute the whole job throughout from our own extensive stocks.

It is also worth your while to remember that we stock the largest variety of RULED BILLHEADS in the trade.

DIVIDENDS AND REPORTS.

AMALGAMATED PRESS (1922), LTD.—An interim dividend of 1s. per share (less income tax) on the ordinary shares having been paid in January last, the directors now recommend a final dividend of 2s. per share (less income tax), making 15 per cent. for the year. In view of the fact that the period has been one of acute depression in almost all industries, the results of the year's trading, as disclosed by the accounts, may be regarded as highly satisfactory. In spite of the condition of trade in general, the company's revenue from advertisements during the year has been the largest in the history of the business. On the other hand, costs of production and expenses generally are continuing to rise.

DAILY MIRROR NEWSPAPERS.—Interim dividend 7½ per cent. (A year ago same payment.)

SUNDAY PICTORIAL NEWSPAPERS (1920).—Interim dividend 6¼ per cent. (A year ago same dividend.)

NEW COMPANIES.

LEE-CHADDERTON CO, LTD.—Capital £300, in £1 shares; commercial, legal and manufacturing stationers, typists, copiers, etc. Private company. Permanent directors: H. Lee, G. F. Chadderton, T. S. Meldrum, T. S. Bryden and W. D. Bryden. Registered office: 65, Imperial-buildings, 15, Oxford-road, Manchester.

COLLINS AND MACDONALD, LTD.—Capital £100, in £1 shares; to acquire the business of advertising agents, printers and publishers carried on at 159, Peckham Rye, S.E., as "Collins and Macdonald." Private company. Permanent directors: J. Collins and A. J. Macdonald. Registered office: 48 and 49, Queen Anne's chambers, Westminster, S.W.1.

ESTATES REVIEW, LTD.— Capital £100 in £1 shares; proprietors and publishers of newspapers, periodicals, magazines, books, etc. Private company. Permanent directors: A. Sockett and A. E. Sockett. Secretary: A. H. Sockett, 25, Old-buildings, Lincoln's-inn, W.C.2.

JOHN HAMILTON, LTD.—Capital £2,000, in £1 shares; proprietors and publishers of newspapers, magazines, books and other literary works and undertakings, printers, stationers, bookbinders, etc. Private company. Directors: C. H. Daniels and Mrs. Mary F. Daniels Solicitors: Eland, Nettleship and Butt, 4, Trafalgar-square, W.C.2.

ASSOCIATED PHOTOGRAPHIC PRINTERS, LTD.—Capital £3,000, in £1 shares; to acquire the business of Philip G Hunt and Co., and the London Photo Printing Co., recently carried on at 332, Balham High-road, S.W., by the late P. G. Hunt, and since his death by his executors, and to carry on the business of photographic, photogravure, collotype, photo-process, photo lithographic, chromo-lithographic photo-chrome and general printers, engravers, block makers, etc. Private company. First directors: R. G. Hunger, H. G. Butler and A. R. S. Sneath. Registered office: 332, Balham High-road, S.W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

MORRIS WALLPAPER CO., LTD.—Mortgage on 107 and 109, Kirkgate, Wakefield, with plant, etc., dated July 20th, 1925, to secure all moneys due or to become due from the company to the National Provincial Bank, Ltd.

LIBRARY PRESS, LTD. (publishers, etc., London).—Issue on July 24th, 1925, of £500 debentures, part of a series already registered.

DE GRUCHY AND CO, LTD. (stationers' printers, etc., London).—Debenture dated July 23rd, 1925, to secure £1,500, charged on land at Clerkenwell and the company's undertaking and property, present and future, including uncalled capital. Holders: Branch Nominees, Ltd, Bishopsgate, E.C.2.

EASTERN COUNTIES ADVERTISING CO., LTD.—Debenture dated August 5th, to secure £350, charged on the company's property, present and future, including uncalled capital. Holder: R. G. Acock, 69, London street, Norwich.

REMINGTON KRAFT PAPER CO., LTD.—Deposit on July 20th, 1925, of deeds of Albert Mill, Albert-road, East Retford, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

RICHARDSON PRINTING INK CO, LTD.—Mortgage on certain property at Tanfield, Chopwell and Rowlands Gill, dated August 4th, 1925, to secure all moneys due or to become due from the company to the Bank of Liverpool and Martins, Ltd.

A. WEEKES AND CO., LTD. (music publishers, London).—Mortgage dated July 27th, 1925, to secure £12,000 charged on 14, Hanover-street, and 6, Pollen-street, Hanover-square, W. Holders: Trustees of the Liverpool Victoria Friendly Society.

SIMPKIN, MARSHALL, HAMILTON, KENT AND CO, LTD.—Particulars filed of £30,000 debentures authorised June 18th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, but excluding any shares held by the company carrying on business as booksellers, stationers or newsagents, the amount of the present being £12,000.

WESTMINSTER ADVERTISING SERVICE, LTD.—Particulars filed on August 1st, 1925, of £5,000 debentures authorised August 7th, 1924, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

GODFREY, SKINNER AND BROWN, LTD. (printers, engravers, art journalists, etc. Blackfriars, S.E.).—Particulars filed of £500 first debentures and bonus of 5 per cent. authorised July 31st, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

FINANCIAL NEWS, LTD.—Satisfaction in full on December 31st, 1924, of charge dated July 31st, 1917, securing £60,000 with a premium on part thereof. (Notice filed August 6th, 1925).

UNITED NEWSPAPERS (1918), LTD.—Satisfaction in full on July 23rd, 1925, of charge dated November 28th, 1921, securing £20,000.

ELD AND BLACKHAM, LTD. (stationers, Birmingham).—Satisfaction in full on July 30th, 1925, of mortgage dated October 18th, 1923, securing all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £2,500.

CATHOLIC PUBLISHING CO, LTD. (Liverpool).—Satisfaction as to the balances outstanding thereon on or before October 24th, 1922, of debentures dated May 20th, and August 23rd, 1909, and August 14th, 1915, securing £3,000, £1,000 and £1,000 respectively.

BANKRUPTCY.

Re ERNEST THURSFIELD, Claverton-street, Pimlico.—This debtor attended on August 11th at the London Bankruptcy Court for public examination upon accounts showing liabilities £1,142 and assets "nil." In the course of his evidence, the debtor stated that in Oct ber, 1920, he commenced to trade as a manufacturers' agent. From December, 1920, till December, 1922, he was engaged in endeavours to introduce into this country a multicolour printing press of German manufacture; owing to the failure of the German firm, his efforts were not successful, and he incurred liabilities amounting to £1,000, mainly cash advanced, during the period. The examination was concluded.

Re ROBERT TOTTENHAM PARKER, High-street, Kensington.—The public examination of this debtor was held on August 11th, before Mr. Registrar Mellor at the London Bankruptcy Court, the accounts showing liabilities £825 and assets "bad debt £27." Replying to Mr. V. Armstrong, the official receiver, the debtor stated that in or about October, 1921, he secured an agency for a preparation known as Bell's Reliance Multicolour Printing Preparation; in March, 1922, his agency business was acquired by Bell's Reliance Multicolour Printing Preparation, Ltd., a company formed for that purpose, with a nominal capital of £3,000; the purchase consideration of £1,000 was satisfied by an allotment of 1,000 shares, and he was appointed manager and director of the company, which position he held until he retired in March, 1923. The debtor attributed his failure and insolvency to the loss of moneys invested in and lent to Bell's Reliance Multicolour Printing Preparation, Ltd, and to lack of remunerative employment. The examination was concluded.

RECEIVER APPOINTED OR RELEASED

W. F. WHITEHEAD, LTD.—H. W. D. Soper, of 7, Great Winchester-street, E.C.2, ceased to act as receiver or manager on August 5th, 1925.

ARTHUR HENTSCHEL STUDIOS, LTD.—P. M. Harper, incorporated accountant, of 329, High Holborn, W.C.1, was appointed receiver and manager on August 1st, 1925, under powers contained in debentures dated June 29th, 1922.

From the London Gazette.

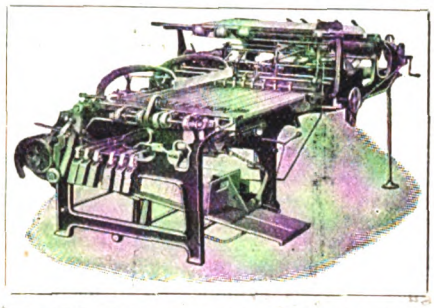
PARTNERSHIPS DISSOLVED.

M. J. Gayan and A. C. Wren, printers, 1, Amelia street, Silvertown, under the style of Silvertown Press.

F. W. S. Pinder and J. Goldman, advertising agents, 71, Fleet street, London, under the style of the Gran-Goldman Service.

RECEIVING ORDER.

J. A. Laurie, 49, St. Alban's-street, Rochdale, Lancaster, printers' stockkeeper.



NEGOTIATIONS are proceeding for the acquisition by the Prussian State of the Stinnes Berlin newspaper enterprises, which publish, among other journals, the *Deutsche Allgemeine Zeitung* and the *Staatsanzeiger*.

HYLTE MILLS, SWEDEN. — Exaggerated rumours have got about concerning the floods in the neighbourhood of the Hylte Mills, Sweden. Although slight trouble has been experienced, it is not sufficient to affect delivery in any way. As a matter of fact, there has been a shortage of water for some time, and the recent heavy rainfall has come as a relief to the district.

A SYDNEY (Australia) firm of manufacturers' agents desire the representation of British manufacturers of boxed stationery and general stationery sundries. They claim to have a good connection in Australia in those lines. (Reference: D.O.T., No. 157).

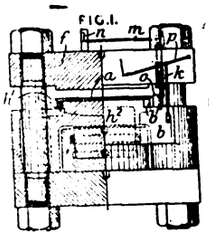
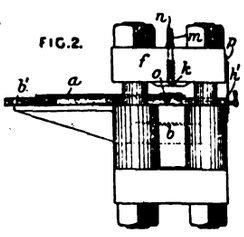
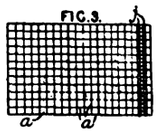
New Inventions

Paper Ruling Machines.



In an invention by Mr L. Waite and relating to ruling-machines of the kind through which the paper to be ruled is traversed between endless cords and cloth or other aprons, the lower portion of the upper cloth B runs throughout in contact with the upper surface of the lower cords C, and the lower surface of the lower cords C with the upper surface of the lower cloth D, both throughout their entire length, so that the paper is held tightly between cords and





cloth after entry between the cloth B and cords C, and is delivered flat to the lay-boy E. The upper cords A and lower cloth D are guided by the usual rollers a, a1, d . . d5. The upper cloth B passes around main rollers b b1 and past guide rollers b2, b3, and then beneath a roller b5, around a roller b6, and over a roller b7, in order to contact its lower surface throughout with the lower cords C. The cords C pass around a tensioning-roller c, a guide roller c3, and the roller d of the cloth D, and then under a roller c1 and over a roller c2 in order to contact their lower surface throughout with the cloth D.

Embossing Presses.

An embossing machine, patented by Messrs. G. P. Bryan and O. E. Armstrong, is more particularly for use in forming showcards by impressing coloured paper characters into cardboard, is provided with means of indicating the depth of impression of the dies comprising engaging parts on the pressure members, one of which has an indicator attached thereto, and the other of which is adapted to receive a sample of the material to be embossed, whereby the scale over which the indicator moves can be calibrated to indicate the depth of impression of the dies. The dies are held on a table a slidable on an hydraulically operated member b of the press, and provided with guide bars b1 for this purpose. To enable the press to emboss a cardboard sheet larger in area than the engaging members of the press, the table a is made longer than the press and successive sections of it are positioned between the pressure members by a pointer h1 co-operating with markings on one of the guides b1, or by a gravity-actuated pawl h2 or spring-pressed balls engaging notches in the guide. The means provided to indicate the depth of penetration of the dies to ensure uniform impression, comprise a block o attached to the member b and a downwardly-pressed plunger k mounted in the upper press-head f. The upper face of the block o is level with the top face of the type and the lower face of the plunger k normally level with the lower face of the head f. A sample of the cardboard is placed on the block o or the cardboard on the table extended to overlap the block so that when the machine is set in operation and the plunger k is engaged by the cardboard on the block, the plunger moves a distance equal to the depth of the impression. This movement is transmitted to a pointer m moving over a scale n graduate to indicate the depth of impression of the dies. A separate arrangement, consisting of a pointer p pivoted on the member f and on a link attached to the member b,

may be provided to indicate the relative movement of the two pressure members. The member b may be raised initially by hand, hydraulic means being used only to produce the final pressure. The member b may be fixed and the head f hydraulically-operated, a balance weight being provided to lift the head from the work after the embossing operation.

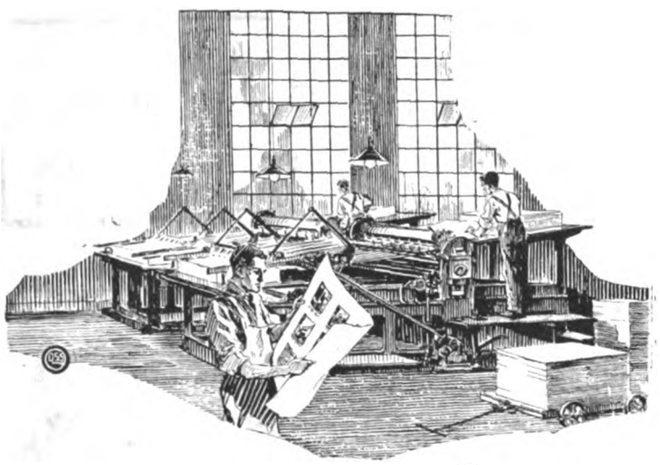
The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

TRADE continues to be rather quiet with papermakers and merchants; but in printing circles there appears to have been a slight livening up. According to some sellers of papers, there are signs of improving trade; but so far we have seen nothing to warrant the conclusion that conditions have definitely taken a turn for the better. There cannot be much hope of anything approaching a trade revival until the holiday season is over, for one thing; or until the overseas outlook improves, for another. Eastern tangles are crippling the textile industry, cramping shipping and shipbuilding and reacting upon our engineering. Nearer home the unsettled condition of Europe, the Russian boycott and the continued fluctuation of exchanges retards trade recovery and development in inter-trading, while enabling low-currency countries to undercut us in the available markets. At home, industry is very unsettled, labour production is relatively low, and costs of production are relatively high. The result is that, excepting in odd cases where there is a monopoly or some form of Government protection, profits are exceedingly difficult to secure and high selling prices are the rule.

* * *



THERE has recently been concluded an agreement between the paper merchants and the printers which aims at regulating the sale of paper to users of the newer types of duplicating and office printing machinery and equipment. The high price of printing during the war, and for two or three years after, of self-printing appliances into those offices presented an opportunity for the installation and warehouses where large quantities of printed matter are regularly consumed. The high prices obtained and consequent fat profits made by these users of printed matter during the boom years left them with a surplus, which went partly to the Government and partly in the purchase of extras. Self-maintenance in printing made a strong appeal and many machines were purchased up and down the country. Then came the question of paper supplies, and there is no doubt that many dealers and some merchants went direct to the office and warehouse user of automatic printing and duplicating machines. Printers, who had lost a lot of their old business, claimed the paper part of the trade. The user preferred to go for lower prices to the paper houses, a number of which refused to deal direct. Others actually sought and still seek the business; but they do not want the printer to think such is the case, lest in grasping at new trade they should lose the old.

* * *

IF complexities are looked for in this question of direct supply, they can be found in abundance. There is no burking the main issue, however. So long as the printer is the main customer of the merchant, the merchant should give a square deal and protect his client's interests. There is a clean line of cleavage between a legitimate printer and the private user of a machine for his own office or warehouse needs. It is grossly unfair of any paper merchant to support the development of paper-usage for printing under conditions prejudicial to the interest of the printing trade. Under the new agreement the Paper Merchants' Association has promised not to advertise or solicit orders for paper direct from users of office printing appliances outside the printing trade. This is one of those cases which typifies the sheer necessity of carrying representative organisation to its utmost limit. When an association agrees on a policy, it pledges its members, but leaves them exposed to whatever action non-members may care to take. Merchants and paper dealers owning no allegiance to any organisation can concentrate to their heart's content on direct trading or any sort of trading they desire. Printers, through their organisation, should supplement the efforts of merchants to secure right methods by agreeing to boycott non-members who continue to cater direct to office users for paper orders.

* * *

THE first new price list with prices arranged per thousand sheets has arrived from Messrs. Portals, Ltd. All the leading lines are itemised in order of size and substance with the present weight per 480 sheets and the new price per one thousand sheets Doubtless we will shortly be hearing from other merchants who are at present busily engaged in revising their tables.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

Although the metal zinc is infinitely more extensively used as the metallic printing surface in offset lithography in all parts of the world, nevertheless there are still a considerable number of lithographic establishments that continue to adhere to the use of aluminium plates and aluminium rotary cylinders as the metallic printing media for the offset machines. Consequently there are many litho printers who have not had experience of zinc plate work, and likewise a larger proportion who lack the experience of aluminium plate work, since they have been more or less wedded to their apprenticeship training. As there are many important features of difference in the employment of these two metals in all forms of lithographic offset machinery, we shall now deal with the practical manipulation and use of aluminium plates for this work in much the same way as we have already done with zinc.

Aluminium Printing Surface for Offset.

For those firms who may contemplate establishing aluminium printing surfaces in their works, the first consideration will be the selection of good sheets uniformly thick and well rolled. The surface that is selected for the printing should be free from blisters or loosely attached shell or rolled skin; therefore both faces should be carefully scrutinised and the best surface selected for the graining.

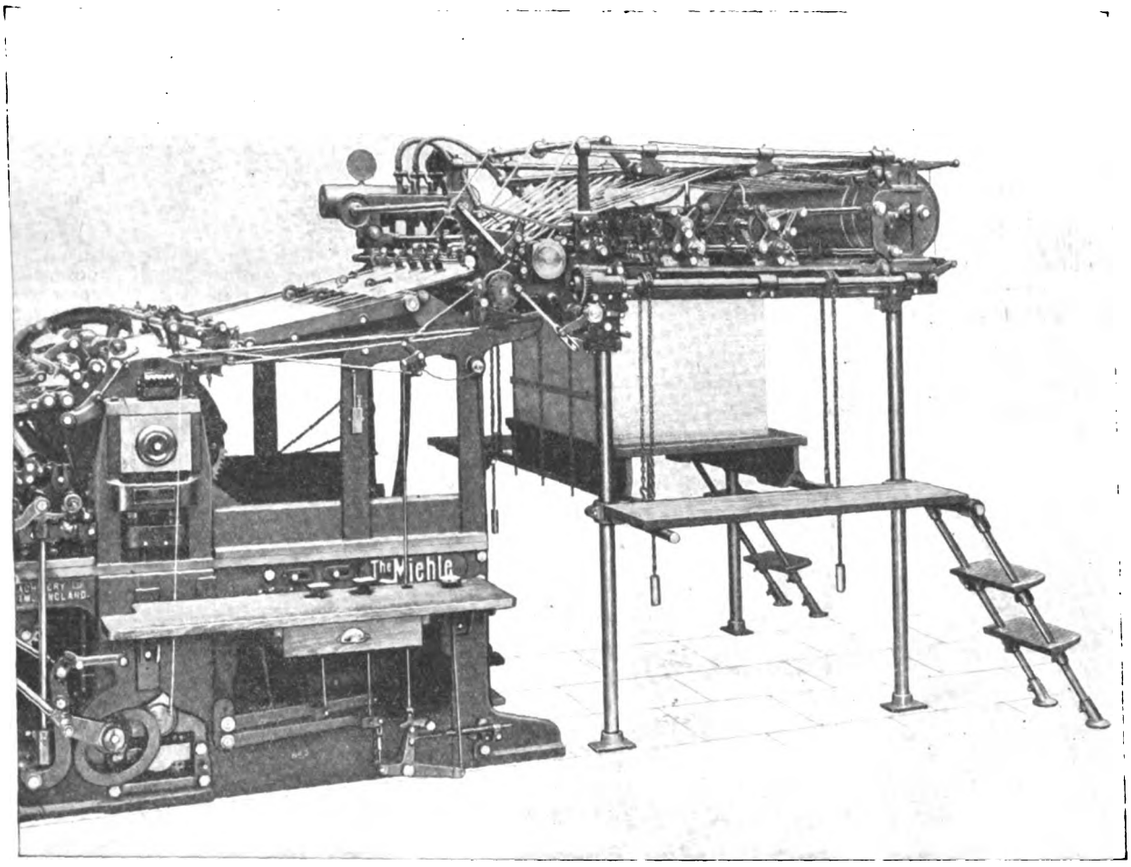
Aluminium plates are now manufactured for lithography with a guaranteed purity of 99¼ per cent. of aluminium. Different makes of offset machines have different gauges of thickness. The most popular gauges are 22 and 33. Of course, these aluminium plates can be purchased from the supply houses ready grained and prepared with either a fine grain, medium or coarse matt grain surface suitable for all classes of work. Necessarily all aluminium plates for use in offset work must possess this "tooth" surface; and the more perfect the tooth or grain, the better for the machineman.

As with zinc so with aluminium plates, the transferrer finds that we can transfer more easily and more quickly with a finer and shallower than with a coarser and deeper grain. On the other hand, the offset minder likes a good emphatic grain, as it acts as a more perfect reservoir for the damping water, whereas a too decidedly smooth grain would retain so minute a film of water as to make it difficult to print some of the heavier colours and to keep the plate free from gum and colour tinting. This disparity of practical conditions between the transferring section and the machine end of metal plate lithography is inevitable, but invariably the machine end condition is the one that prevails, as the difficulties at the transferring end can be the more easily composed and negotiated by bestowing a little extra time for the operation of rolling up.

Aluminium Plate Graining.

The initial procedure, then, with aluminium plates is the graining. When the texture of the grain that is required for the work in hand has been decided upon, the graining is accomplished in the same graining machine as used for the zinc plates. The chief difference in the finish of the grain is that the apexes will appear to be rather more sharp and crisp than the similar scale of zinc plate graining assumes. Again, the reflection of the light from the aluminium grain is somewhat different from the zinc, but after a little comparative experience with the two metals the lithographer is soon able to appraise the exact and true values of these appearances.

After the graining and the washing off of the newly grained plate is accomplished, the affinitising for transferring is the next procedure, and is carried out as described below.



The best practical and technical method of manipulating aluminium plates is "Transferring." Before laying the aluminium plate upon the transfer bed, dust it carefully over, back and front, so as to remove any particle of grit or fibre that might be adhering to it. A piece of clean rabbit fur skin is good for this purpose. If the plate has been in stock for a long time, it should be washed over with a small quantity of the following stock solution:—Nitric acid, 10 ozs.; water, 1 gallon; powdered alum, 8 ozs. Then rinsed and dried quickly. Or it may be similarly treated with a solution of sulphuric acid, 1 part; water, 30 parts. Either of these solutions will re-sensitise the plate to greasy substances.

The lay mark for the transfer should not be marked on, utilising a straight edge, and allowing about 2¼ ins. for rotary gripper space. The front edge may then be bent down in the gripper bars of the iron bed of the transfer press, and just tightened up to hold the plate securely.

The best transfer paper to use for the aluminium plates is the Everdamp transfer paper, both transparent and opaque varieties. If either of these is used, then no preliminary damping of the plate is necessary. When French transparent transfer paper is used upon a damp plate, the solids do not go down firm, but if a small piece of common washing soda is added to the damping water, it enables these solids to go down firm. Before running the transfers down to the plate, brush over the surface very lightly with a broad camel hair brush to remove any fluff. The patched up transfer sheet is then laid in position to the ruled line, the backing sheets are put on, and the carriage run through under a light pressure, increasing it gradually until the transfer is run down completely. The paper is then peeled off, the plate washed over with clean water to remove the coating composition, and fanned dry. Any "touching up" is done with litho writing ink, or a 6 H hard lead pencil may be used. The plate is now "gummed-up," spreading the gum to a thin film with a specially kept gum cloth; then fanning dry.

Washing out over the dry gum next takes place (without using any water whatever) with the following "Asphaltum tincture" and fanned dry: Asphaltum powder, 1 lb.; ben-

The L&M Automatic Feeder

This Pile Suction Feeder can be supplied in three different styles:—

(1) With sheet-turning arrangement for perfecting (as here illustrated);

(2) For one-way feed only (i.e., without the turning-over drum);

(3) As a semi-automatic feeder, for handling the heaviest papers and cardboard.

A four-page folder, Reference No. 808, which fully describes the complete feeder, will be sent on request, together with particulars of styles (2) and (3) if so required.

zole, 1 pint; turpentine, 5 pints; tallow, 4 ozs.; oil of lavender, 1 oz.; beeswax, 4 ozs. Melt all together, and when liquid add the turps; the asphaltum should be mized with the benzole.

Now wash the gum off, with warm water for preference, and rub up the job with black ink and soft rag, employing the gum sponge in conjunction, as usual. Follow by rolling-up with the black "nap" roller, till all the work is sharp and firm. Then dust the work with Colophonium powder (resin), followed with French chalk. Finally, clean up the plate.

Government Contracts.

Contracts were placed with the following firms during July:—

Market for Photographic Goods.

A report from Mr. Luther L. Holman, U.S. Vice-Consul at San Salvador, states that according to local dealers there has been a marked increase in the sale of camera and other photographic goods in Salvador during the past year. Estimates place 85 per cent. of the photographic supplies as coming from the United States, and the remaining 15 per cent. from Germany and France. Exports of photographic paper from the United States to Salvador during 1924 amounted to 2,827 lbs., compared with a total of 17,332 lbs. to all Central America.

SWEDISH CHAMBER OF COMMERCE.—The Year Book 1924 published by the Swedish Chamber of Commerce for the United Kingdom contains a wealth of information concerning the activities of the Chamber and the commerce of Sweden. The trade reports present useful data in an agreeable form and are contributed by expert members in England and Sweden respectively. With regard to the pulp and paper industries, the reports are very complete, and embody statistics which it is useful to have in this handy and permanent form. The volume has a portrait of Mr. T. D. Nuttall (Bentley and Jackson, Ltd.) as a frontispiece, followed by a biography. There is also the 18th annual report of the council and an account of the proceedings at the annual meeting of the Chamber, together with a list of members, etc. Altogether a useful and well-arranged volume.

Production of Periodicals by Photo-Offset.

By RICHARD ABRAM.

The production of periodicals by the photo-offset process has now reached that stage when it is safe to predict that the future holds great promise of more existing publications being turned over to offset and serious consideration being given to the creation of new ones, particularly those which are composed of about 30 per cent. illustrations.

The change-over from letterpress to offset entails a considerable initial outlay, more especially in the photographic and machine departments, particularly where offset is not at present operated. The existing composing-room equipment can be used with but little alteration.

The writer's opinion may be stated here, from an exhaustive study of phototype composing machines, as existing at present, that no alternative to the present slug-casting or monotype machine is within the bounds of practicability.

For a clear explanation of the present method of working editorial and advertising matter will be treated separately. A particular study of advertising is essential, and will be dealt with first. The writer may be forgiven for dealing with it at length, but it has been his experience that considerable misconception has arisen in the minds of advertisers and their agents regarding the possibilities—and the limitations of offset, and nothing short of an intensive educational campaign can convince them of the inestimable benefits accruing from the use of it.

Advantages in Illustrations.

In the first place, blocks are not required, although it is cheaper for the printer, at the present stage, to use existing line blocks, of an open character, than to photograph from sketches. Half-tones should be made from the original—whether photographs, wash drawings, or other originals which would be reproduced as half-tones by process methods.

Advertisers will find, with a growing use of offset, that, instead of having blocks of varying screens made, they will be able to furnish bromide prints to the offset printer, who will hold those prints in the form of originals for repeat advertising, just as the letterpress printer holds original half-tones, stereos, or electros. He will find that, in varying the space used for his advertisements, it is possible, without any additional cost, to alter at will, in shape or size, his illustrations to suit the available space. The advantage which this method has over letterpress work cannot be emphasised too strongly.

For line work, advertisement illustrations may be obtained from any original line drawing or from impressions of existing blocks. Border or other designs may be cut out and used in a multitude of ways, without any expense whatever. The procedure is briefly this: the advertiser makes a layout in the usual way to the space available, using sketches, pulls or blocks. A negative is made of the illustrations of the size required, and from that four blue prints are made. The compositor takes the blue print of the illustrations in the advertisement, and sets up whatever type matter is required. Pulls are taken of the type portion and the blue prints pasted in position for submission to the advertiser. When the final "O.K." is received a bromide print is made of the line illustrations, the use of which will be observed later. It has been found in practice that advertisers are perfectly willing to "O.K." proofs submitted with blue prints of the illustrations. The same procedure is observed in the case of half-tones, except that bromides are not made for the photographic processes, the reason for which will be apparent when we reach that stage known as "going to press."

Reproducing Type Matter.

Editorial matter is treated in much the same manner, that is, blue prints are made of the line and half-tone illustrations to the required size. The type matter is set to fill the space, whether in regular columns or irregular spaces around the illustrations. Where intricate cut-out illustrations are used, or where they occupy more than an even column or columns, experience has taught that a layout sheet, ruled or printed with columns and white spaces showing, is admirable as a guide for the machine operator. The blue print is trimmed close around the edges and pasted down exactly where required, and the composition is proceeded with. Press proofs are submitted in galley form of the editorial matter, which is then cut as required to fill the given space, and pasted up on the layout sheet, on which the blue prints are pasted, and returned to the composing department for revise. The make-up is proceeded with, page proofs being submitted, with the blue prints in position, to the editorial department. Where illustrations occur in advertisements or editorial matter, the space is blanked out by the compositor and the pages are sent down for press in the usual way.

It has been found that the most convenient size negative is a 20 by 24, so it follows that the most expedient method of taking impressions for photographing, of the average size journal (12 by 9), is to impose four pages in one forme, and take the good impressions from that forme. Machine plates taking eight pages of the journal are printed from a negative made up of two of these fours, so it will be apparent that each four laid down for the letterpress prover must be imposed so that two fours together form an inner or an outer of the sheet to be printed. The paper used for obtaining impressions is an ordinary white matt art, needing less exposure than a paper with a "surface."

Proving the Letterpress.

The aim of the composing department should be to eliminate, as far as possible, make-ready on this sheet, by the use of new type for advertisements, and the intelligent use of machine-set type for editorial matter. Modern composing departments are equipped nowadays with type that—with the elimination of stereotyping, and the use of monotype display machines or the Ludlow typecasters—ensures a perfect printing surface. As blocks are not used, it has been found that a perfect impression can be obtained with little make-ready, providing an up-to date letterpress machine is used for proving. As the film of each four pages, when photographed, has to be transferred from a 20 by 24 negative to a negative large enough to cover each inside or outside-eight, a piece of rule is inserted at the outside of each head, centred between them, and at the foot of each back, centred also, the impression of which is a guide when laying down the film on the larger glass, such glass being previously ruled between the heads, backs and gutters. It will be observed that this method of obtaining a proof of four pages has an advantage over proving eight pages, namely, it is possible to proceed for press immediately any four pages (conforming to the imposition) are "O.K.," without waiting for a complete eight pages, as would be the case in stereotyping a plate for a letterpress machine. This enables the letterpress prover, artist, camera operator, stripping operative, and the re-touching artist to be working on the publication at the same time. It has been found, too, that with late advertisements, late corrections or news, it is possible to insert at the last moment—just before printing down.

Concluding Operations.

To return to the proof from the letterpress prover. This is passed to the artist, who proceeds to paste on it, in position as shown on the proofs, bromide prints of headings, advertisement and editorial illustrations, in line, and to black out where half-tone or fine line illustrations are to appear. The whole sheet, after being passed for the camera, is then photographed. The remaining operations, stripping the film from the smaller negatives and the assembling of the line and half-tone films on the same glass are proceeded with, and the whole prepared for printing down, which is done with a speed usually associated with newspaper production.

Late news and late corrections and additions may be made on the negative by scraping away the portion to be altered and the insertion of the corrected portion—always useful for later editions of the periodical.

No attempt has been made to give formulæ, or to explain in detail the processes of camera, stripping or printing down, as these follow the latest developments of photographic practice, and deserve volumes of explanation.

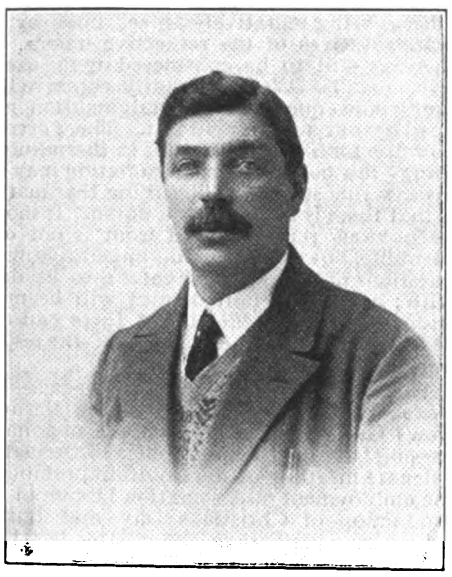
Who's Who



IN THE

PRINTING & ALLIED TRADES.

Mr. Woodgate Stevens.

Mr. Woodgate Stevens is probably best known to the industry as the energetic secretary of the London branch of the Amalgamated Society of Lithographic Printers, a position he has held for a period of 31 years. As showing the progress made by the London branch of this Society during Mr. Stevens' occupancy of the secretaryship, it may be mentioned that the number of members has grown from 250 in 1894 to 1,600 at the present time.

Mr. Stevens, who was born in London, was apprenticed as a lithographer at the office of the Monotype Printing Co., which was then

Mr. Woodgate Stevens.

situated off the Strand, but is now extinct. After spending a short time at Messrs. Truscotts he found his way to Messrs. Blades, East and Blades, where he was engaged as a journeyman lithographer. On leaving this old-established firm of lithographic printers to assume his present office in a full-time capacity, Mr. Stevens received from Mr. George Rowland Blades (now Sir George) the personal good wishes for his future welfare. This incident Mr. Stevens always recalls with a certain amount of pride.

Recently the subject of this brief sketch had the honour of being chosen chairman of the London District Committee of the J.I.C. Besides holding this important appointment, he is secretary of the London Printing and Kindred Trades Federation, succeeding in this post the late Mr. Alfred Evans in 1915. This organisation, of which Mr. C. W. Bowerman, M.P., is president, has a roll strength of some 75,000, and has done excellent service to the industry in dealing with questions affecting wages, hours, overtime, etc., in London, especially during the war.

Mr. Stevens has many other spheres of voluntary activity. He is vice-chairman of the Employment Exchange of the City of London. He has also been for a considerable time a useful member of the Lithographers' Auxiliary, an institution which has raised considerably over £3,000 towards securing pensions for aged lithographic printers and their widows. His interest in technical education finds an outlet as a member of the Advisory Council of the London School of Printing and as one of the oldest members of the L.C.C. School of Engraving, Bolt court. He is also a member of the Book Production Committee of the L.C.C. Regarding the lithographers' national organisation, Mr. Stevens has always loyally supported Mr. T. Sproat, the general secretary. During the time he has occupied his present post, the London secretary has served the national body on the occasion of the Lithographers' International Triennial Congresses at Paris, Milan, Copenhagen, Berne, and Cologne.

Mr. Stevens performed a great deal of valuable work during the war, more particularly as a member of the Food and Profiteering Committee for the City of London.

Lithographic Trade Review.

NOTES AND NEWS.

TRADE generally in the lithographic section of the industry is reported to be quite satisfactory, whilst as far as London is more particularly concerned conditions are described as very good. As regards unemployment, figures to hand show employment amongst lithographic printers in London as quite normal, whilst the conditions prevailing to-day are much better than those that obtained in pre-war days.

A SPECIAL meeting of the Secretariat of the International Federation of Lithographers was held in Cologne on August 6th, 7th and 8th, at which the question regarding the manning of offset machines was under discussion. This matter, which has been the subject of a good deal of discussion on the Continent for some time has arisen out of the differences of opinion existing between the typographic and the lithographic unions as to which of the two sections should have offset printers under its control. The meeting was attended by some thirty representatives from different nations, the following being present as the spokesmen of the lithographic workers of the United Kingdom: Messrs. T. Sproat and F. Boaler (general and assistant secretaries of the Amalgamated Society of Lithographic Printers), Rupert Kneale (general secretary, Amalgamated Society of Lithographic Artists), and Woodgate Stevens (London Branch secretary, Amalgamated Society of Lithographic Printers).

WE understand that as a result of the deliberations of the conference a decision was arrived at by a large majority that the offset machine be controlled by the lithographic unions of the several countries.

DURING the course of the conference the delegates from the different countries were entertained to a banquet by the local German lithographic association, and altogether an enjoyable and instructive time was spent.

THE Federation of Master Process Engravers has been questioning its members with a view to the obtaining of agreed rates for a schedule of photo-litho prices. The questionnaire has brought a number of replies that need much dissecting and arranging, so the matter has been referred to the committee appointed to consider the matter, and when their report is presented it will be carefully considered.

REMARKABLE success is attending the effort of the lithographic industry in the United States to found an institute of training and research. The Lithographic Technical Foundation may now be said to have been definitely established. The original intention of raising $600,000 has been realised and the endowment fund is expected to increase, if it has not already done so, to $1,000,000. The movement originated with Mr. Alfred B. Rode, a well-known New York lithographer, who desired to establish some means for the adequate training of apprentices and at the same time found some institute that would have as its slogan "Co-ordination of Education and Research." This idea came into Mr. Rode's mind but a few months ago and it was not very long before he had interested numerous other members of the industry in a plan to establish a Research Laboratory at the University of Cincinnati. Meetings have now been held in various important centres, and the lithographers of the United States have rallied with enthusiasm and generosity to support a movement that must do much to assist the progress of lithography in America.

THERE is perhaps no name better known in the roll of lithographic artists than Joseph Pennell's, and all who have appreciated his art will learn with interest that he is about to issue in America a volume of reminiscences entitled "The Adventures of an Illustrator." Mr. Pennell's relations with lithography, art and literature, furnish a rich store of information and anecdote upon which to draw, and this volume will contain gleanings from his experiences in America, England and other countries. The volume is to be profusely illustrated with his drawings, etchings and lithographs, many of them reproduced for the first time, as well as by portraits of the authors with whom he worked, made by Whistler, Sargent, Beardsley, Bracquemond, Chase, St. Gaudens, together with examples of the work of artists of Europe and America. A de-luxe edition will contain two illustrations in colour and an original signed etching that are not included in the regular edition. The publishers are Messrs. Little, Brown and Co., of Boston.

THE annual meeting of the Lithographers' Auxiliary to the Printers' Pension Corporation was held on Thursday at the "Red Lion," Red Lion-street, E.C. Included in the business of the evening were the election of officers, consideration of the report and balance sheet and the alteration of rules. From the various items in the balance-sheet for last year the Auxiliary appears to have experienced a prosperous season. In October the committee had in hand a sum of £396, and the profit on the year's working reached £430. The total funds paid to the Corporation with interest now amounts to £3,690, and nine pensions have been bought, representing £3,600. The meeting re-elected Mr. J. Mynott hon. secretary for the ensuing year.

THE report of the Swiss Society of Master Lithographers for 1924 deals with various matters, including import and export duties, applications from foreign countries to have printing done in Switzerland, wages, insurance, etc. Standardisation of paper is engaging the attention of all printers, and papermakers, who have opposed the idea, seem now inclined to consent; it is hoped that the matter will be settled in 1925. The question of prices has been much debated, especially amongst photo-engravers who cannot agree *re* prices of blocks. The report states that blocks have been sold at pre-war prices though wages have increased 150 per cent. and raw materials 100 per cent. at least. Finally much space is devoted to the old quarrel between printers and lithographers on the offset question.

Necrology

Mr. Frederick J. Hall.

We regret to record the death at Oxford—after an operation, following a short illness—of Mr. Frederick John Hall, Controller of the Oxford University Press. He was 61 years of age, and had spent his whole working life in the service of the Press. He was the son of a Crimean and Indian Mutiny veteran, who, on retiring from the Army, held official positions in the University. In August, 1878, he went to the Press as junior clerk in the Controller's counting house. He there worked his way to a position of trust, and in February, 1900, was transferred to the London office, where for many years he worked under Mr. Henry Frowde. There he was especially concerned with problems of manufacture, costs, and prices, and was largely responsible for the planning of Bibles, prayer-books and cheap reprints of the classics. In April, 1915, on the resignation of Mr. Horace Hart, the Delegates of the Press appointed Mr. Hall to be Printer to the University (Controller of the Press). On both the scholarly and the commercial side of his work, Mr. Hall showed distinguished ability, and under his management the Press came very creditably through the trying period of the War, and was afterwards extended and improved. The University in June, 1922, conferred on him the honorary degree of M.A. He married Alice, the second daughter of the late Mr. John Streaks, who was himself for over 40 years an official of the Press. The funeral takes place to-day (Thursday) at 2.30. The first part of the service will be held in the Church of St. Michael and All Angels, Summertown, Oxford, and the second part at Wolvercote Cemetery.

Mr. Victor Lawson.

The death has occurred, from heart disease, of Mr. Victor Fremont Lawson, editor-proprietor, and publisher of the *Chicago Daily News*. Had he lived until September 9th he would have completed his 75th year. In the early nineties, together with Mr. Melville Stone, he founded and became first director of what has become, probably, the greatest news-gathering service the world has ever seen—the Associated Press, which has thousands of correspondents all over the world. Beginning life as a printer's boy, he became one of the richest and most influential newspaper proprietors in the States.

THE death has occurred in Edinburgh of Mr. Kenneth Annandale, head of the printing works of Messrs. Leslie, Perth.

MR. FRANCIS EDWARD TIFFIN, editor and proprietor of the *Plympton District Times*, South Devon, was found dead in bed at his home on Saturday morning. A native of Guildford, he was 54 years old and some years ago owned a paper at Purley.

MR. WILLIAM BISSET, whose death has occurred at Blairgowrie, was for many years a compositor in employ of John Leng and Co., Ltd., and rose to the position of day foreman.

THE sudden death of a compositor named Edward Ernest Stevens, aged 63, Brockley, was the subject of an inquest held at Greenwich last week. A verdict of "natural causes" was returned.

MR. CHARLES EDWARD RUTHERFORD who died suddenly at Jesmond, Newcastle, on Saturday, at the age of 62, was the second surviving son of the late Mr. John Henry Rutherford, who was at one time proprietor of the old *Newcastle Courant*.

AN unemployed papermaker, James Henry Tressider, aged 69, was found drowned in the Aire and Calder canal at Stourton, near Leeds.

SENOR ARMANTO ALVARADO, the publisher of *El Dia*, was shot by two men as he was getting out of his car outside his house on Thursday. He died later in hospital.

THE officials and workmen of the town of Grand Falls, Central Newfoundland, where Lord Northcliffe 20 years ago established his paper mills, have received legacies left by him under his will amounting to a quarter of a million dollars.

Personal.

MR. FRANK COLEBROOK, F.A.I., has returned to London from a visit to the United States. He was called to New York in a matter involving newspaper rotary machines to give evidence upon an appraisal he had made.

MR. COLEBROOK had the satisfaction of seeing a decision promptly reached in what had been protracted litigation, and a decision largely in accord with the conclusions he had formed and to which he had testified in examination and cross-examination.

AFTER this settlement Mr. Colebrook inspected various newspaper and important printing and engraving plants in New York, Boston, Toronto, Detroit, Chicago, Washington, Philadelphia and elsewhere. He also inspected the New York works of Messrs. Robert Hoe, and the Chicago works of Messrs. Goss, both rotary newspaper machine makers, besides a number of concerns related to newspaper production such as those of the Mergenthaler Linotype Co. and the American Type Founders.

MR. COLEBROOK was made a member of the University Club of New York and of various newspaper and city clubs.

MR. J. E. PENGELLY, a member of the composing staff of the *Western Evening Herald*, Plymouth, last week completed half a century of service in the printing department of the associated newspapers.

SIR ALBERT SPICER, who was knocked down by a motor cycle at Llandrindod Wells, is making very slow progress and is still too ill to be moved.

MR. FRANK LLOYD has given £500 for the fund for the extension of Croydon Church.

LIEUT.-COMMANDER THE RT. HON. EDWARD HILTON YOUNG, D.S.O., D.S.C., M.P., who is to be chairman of the newly-appointed Royal Commission on Indian Currency and Finance, is editor-in chief of the *Financial News*.

MR. S. SHARPE, formerly advertisement manager of the *North Star*, has been presented by Tyneside friends with a smoker's cabinet on leaving to take up the managership of the *Blackpool Times*.

MR. PERCY WATSON, for many years news editor of the *Evening Standard*, has been appointed advertising manager of the *Morning Post* as from next Tuesday.

MR. W. R. HURST, the American newspaper magnate, has purchased St. Donat's Castle, in South Wales, and this purchase is associated with rumours of a newspaper venture in London.

MR. JOHN R. HASTINGS, managing director of the *New York Evening Journal*, and Mrs. Hastings, sailed last week from Southampton in the "President Harding."

MR. ARCHIBALD R. GRAUSTEIN has been chosen to succeed Mr. Dodge as president of the International Paper Co. A graduate of Harvard University and a well-known member of the legal profession in the U.S., Mr. Graustein came first into intimate contact with the Canadian paper industry through his work on the re-organisation of the Riordon Co.

SIR VANSITTART BOWATER, M.P., the Governor, and Mr. Deputy J. J. Redding (the Deputy Governor), and the Court of Assistants of the Irish Society, which administers the estates of the Corporation of London in the North of Ireland, have returned to London after their annual visit to Londonderry and Coleraine.

MR WILLIAM PENMAN'S genial presence is again welcomed in London paper trade circles, after an absence of about two months in Scotland. Whilst staying at Ardrossan he, unfortunately, was indisposed, thus prolonging his absence.

Trade Union Matters.

UNITED STRIKE ACTION.—The principal subject of discussion at the Trades Union Congress to be held at Scarborough next month will be proposals for giving the General Council or a special council the power to call upon individual unions to strike, or to call a general strike. It is interesting to note that a printing trade union, the London Society of Compositors, is to put forward an amendment which "deprecates any proposals having for their object the merging of all the affiliated bodies into one union," and objecting to substituting the general strike plan for "the present method of each industry proceeding in the way best suited to its needs and possibilities."

PRINTING UNIONS AND AMALGAMATION.—The Scottish *Typographical Journal*, discussing the proposed amalgamation of the Typographical Association, the Scottish Typographical Association and the National Society of Operative Printers and Assistants, says: "The negotiations have progressed to the point of a scheme being tentatively agreed upon by the representatives of the respective unions, but this has still to be considered by the executive councils. We can readily conceive that the whole question of amalgamation may now be put to the acid test. There need be no cause for alarm in this, for in the nature of things the course of amalgamation may not always run smooth. The thing that matters is that there is a desire for a union. It should be obvious that a united front is not only desirable, but necessary and imperative, when questions of hours and wages are to be dealt with; and such a united front will be made stronger and more effective if there can also be a unification of the schemes of the respec- unions."

T.A. AND CHRISTMAS NEWSPAPERS.—The *Newsman*, the official organ of the National News Guild, commenting on the unanimous passing at the Typographical Association delegate meeting of a resolution prohibiting the employment of Association labour in the production of Christmas Day and Boxing Day newspapers, says the matter has been placed in the hands of the Printing and Kindred Trades Federation, with a view to securing national agreement. Whatever may be the attitude of the constituent unions of the Federation, says the *Newsman*, the T.A. stands pledged to the policy of non-co-operation in the production of newspapers at the festive season of the year.

T.A AND CORRECTORS OF THE PRESS.—The Correctors of the Press recently submitted to the Typographical Association an Executive resolution declaring that the present radius agreement was not satisfactory, and suggesting that the following clause be added: "The A.C.P. and the local chamber of the T.A. shall have discretionary powers to defer any applications when, in their opinion, the state of the unemployment book does not reasonably allow of additions to membership of either organisation." The Executive Council of the Association have considered the suggestion, but have informed the A.C.P. that they cannot agree to it.

Retail Book Trade Workers' CONFERENCE.

The Retail Book, Stationery, and Allied Trades Employees' Association opened its annual conference at Southport on Wednesday. The Mayor of Southport will attend the official luncheon to-day (Thursday). This Association, which was formed in 1919, has during the last two years more than doubled its membership, and it is expected to show a large increase this year. This year's conference, presided over by Mr. S. H. Hunt, of Ealing, is the first to be held outside London.

MESSRS. WARDILL AND GILBERT, of 12, Upper Thames-street, London, continue to handle the high-class papers produced by Unterkochen Papierfabrik, Wurtemburg, and have recently booked substantial orders. The papers produced by this firm cover a considerable range, including writings, boards (white and coloured), fine white printings, white and duplex envelope papers and embossed papers and boards. Two machines (59 and 63 in. wide) give a production of 60 tons a week.

SALE BY AUCTION.

In the High Court of Justice—Chancery Division.

In the matter of WALBROOK & CO., LTD. Sauvee and Another v. Walbrook & Co., Ltd., 1925. W.1859.

13, 14, and 15, WHITEFRIARS ST., LONDON, E.C.4.

Important and Extensive Sale of Letterpress & Magazine Plant and Machinery.

COMPOSING DEPARTMENT includes: 10 LINOTYPES (including 2 Model 4); 20 Founts Matrices; Ventilating Equipment; Double Crown, Royal, Demy, and Crown Folio Proof Presses; 4 Roller Galley Presses; 13 Iron Imposing Surfaces, up to 96in. by 36in.; Large quantity Galleys, Chases, Frames, Racks, etc.; 25 Tons Book and Jobbing Type; 18 Tons Lino and Stereo Metal.

LETTERPRESS MACHINERY comprises: AN EIGHT CROWN "ELBY" SELF-FEED PERFECTING PRESS; Ex. Quad Royal Wharfedale by Dawson & Sons; 3 Quad Crown ditto; Double Demy and Double Crown Wharfedales; Demy Folio Falcon Safety Platen by Waite & Saville; Demy Folio Caxton Platen by John Haddon & Co.; Demy Folio Bremner Platen by Harrild & Son; 2 Crown Victoria Platens.

BINDING DEPARTMENT includes: 4-42in. Self Clamp Guillotines by Furnival & Harrild; 42in. Book Trimming Machine by Harrild & Sons; 7 4a Reel Wire Stitchers by Aug. Brehmer; CHRISTENSEN STITCHER FEEDER WITH 4 HEADS; Tatum Power Punching Machine; Quad Demy Cundall Folding Machine; Nipping Presses; Round Hole Punching and Standing Presses.

ROTARY PLANT comprises: THREE SINGLE REEL ALL SIZE "MARINONI" ROTARY PRINTING AND PERFECTING PRESSES with open delivery, printing 50in. wide, cut off 21 to 40ins. with slitter. Speed 5,000 per hour, with Rotary Casting Box, 2 Finishing Saddles, Boring Machine and Routing Machine.

ONE SINGLE REEL ALL SIZE "MARINONI" ROTARY PRINTING AND PERFECTING PRESS with folder, Speed 6,000 per hour, printing 43in. wide, cut off 33½ to 53½ins., with Rotary Casting Box, Finishing Saddle, Boring Machine and Router.

ONE SINGLE REEL ALL SIZE "MARINONI" ROTARY PRINTING AND PERFECTING PRESS with open delivery and folder, printing 43ins. wide, cut off 33 to 55ins. speed 4,000 per hour, with Rotary Casting Box, Finishing Saddle, Boring and Routing Machines.

ONE SINGLE REEL SET SIZE "MARINONI" ROTARY PRINTING AND PERFECTING PRESS, width of sheet 63ins. printing 44 pages with one cover plate, cut off 18½ins., variable width of section 11⅞ins to 12⅞ins. with quire delivery folder, two double headed wire stitchers, will print coloured cover, speed 5,500 per hour of 44 pages, with Rotary Casting Box, Finishing Saddle and Boring Machine.

ONE TWO REEL SET SIZE "MARINONI" ROTARY PRINTING AND PERFECTING PRESS with colour attachment, quire delivery folder, width of sheet 49ins., width of section 12¼ins. and 12ins., cut off 16½ins. Double Stitching Head, speed 10,000 per hour of 32 pages with Rotary Casting Box, Finishing Saddle and Boring Machine driven by 25 H.P. ELECTRIC MOTOR WITH HOLMES CLATWORTHY SYSTEM of semi-automatic control.

60ins. Slitting and Re-reeling Machine; Collis Disc Edge Planer; 18½ins. Back Planing Machine by J. Esson; A "Lion" Routing Machine by H. Williams; 2 Stereo Hot Presses; 32ins. Stereo Mangle by R. Hoe & Co.; 2 Metal Melting Furnaces; Iron Circular Saw Bench; 2 Flat Bed Stereo Casting Boxes; Portable Iron Imposing Surface; Matrix Rolling Surface. Shooting Bed and Plane; Nickelling Plant by Canning & Co., Ltd.; 30 Founts Electro Matrices for Poster Type.

GENERAL AND WAREHOUSE: 7 Electric Motors 3-h.p. to 26-h.p; 2-25-h.p. Marshalls Loco Compound Undertype Steam Engines; 2 Electric Conveyers; 20 cwt. and 10 cwt. Paper Reel Weighing Machines by H. Pooley & Son; 7 cwt. and 4 cwt, Platform Weighing Machines; 6 Sets of Block and Fall Tackle; 9 Paper Trucks and Trolleys; Carrier Tricycle; All Steel Waste Paper Baler; Crab Winch.

FIXTURES, FITTINGS, AND OFFICE FURNITURE: Stock of Paper, Inks, etc., which will be sold by Auction by Mr.

ROBERT H. RUDDOCK

with the approbation of Mr. Justice Romer, on the premises as above on

THURSDAY, 17th SEPTEMBER, 1925, at 11 o'clock.

May be viewed day prior and morning of Sale and Catalogues of Messrs. Davies Bros., Chartered Accountants, 27, Clements Lane, Lombard Street, E.C.4; of Messrs. Reddall Osborne & Co., Chartered Accountants, 1, Guildhall Chambers, Basinghall St., E.C.2, of Messrs. Walbrook & Hosken, Solicitors, 4, St. Paul's Churchyard, E.C.4, and of the Auctioneer, 71, Fleet Street, London, E.C.4. Telephones: Central 8740/1.

Tenders.

METROPOLITAN BOROUGH OF ISLINGTON.

PRINTING AND STATIONERY.

Lithographic Research and Training.

THAT the Lithographic Technical Foundation is well on the way towards forming an endowment fund of a million dollars is a fact that reflects great credit upon the lithographers of the United States, and it is good and stimulating news for lithographers everywhere. It means that American lithographers truly realise the importance to their industry of technical education and research, and that they have sufficient solidarity of feeling to be willing to join in a big movement for the pooling of their resources for the purpose of a forward drive from which the trade as a whole is to reap the benefit. The fund will make possible on the one hand the closer linking of higher education with practical workshop experience, and on the other hand it links up the lithographic trade with scientific research by the establishing of a research department at the University of Cincinnati, with a University professor at the head of it. The research department will tackle a number of subjects in regard to which the lithographer is constantly meeting difficulty, commencing with the subject of paper, upon which, apparently, the professor has already prepared a report. Thus it is hoped, and confidently expected, that the Foundation is to become a big national movement for the betterment of an important industry. Lithographers in our own country have their difficulties about the provision of efficient labour for years to come; and the troubles with which papers, inks and other things can afflict the printer are not confined to America. British lithographers cannot but look with interest and admiration at this move of their American colleagues, and one cannot evade the question whether the British lithographic trade might not stand to benefit by some movement of a similar character.

* * *

Need of Increased Production.

MR. PERCY DENSON, managing director of Edward Lloyd, Ltd, the president of the newly formed Chamber of Commerce for Sittingbourne, made some forceful observations at the inaugural meeting. One of the chief thoughts before the Chamber, he observed should be how best they could assist production. Increased production meant lower cost per unit. It did not matter what the industry was, to lower the cost per unit enabled them to reduce their selling price, and a lower selling price meant not only a general increase in consumption, but it also enabled them to capture those markets, both at home and abroad, that were at present held by foreign firms. In his humble opinion increased production would solve many of our great problems. It was the only solution of the great problem of unemployment. Increased production was the only means by which we could secure that trade balance which was so essential to our very life as a nation. If the Chamber, by its counsels, could assist with that production, he thought its formation would be more than justified.

* * *

Larger Paper Imports.

IMPORTS of paper and cardboard into the United Kingdom last month—1,308,271 cwts,—show an increase of 8,023 cwts. (·6 per cent.) compared with July last year, and were 428,915 cwts. (48·7 per cent.) greater than in the same month of the preceding year. It is interesting to notice that the total deliveries in July give the highest figures since November (1,342,373 cwts.). In spite of the increased tonnage registered in July compared with twelve months ago, last month's value (£1,326,171) shows a reduction of £17,996 (1·3 per cent.). Contrasting the month just concluded with July of two years ago, however there was a rise of £357,570 (36·9 per cent.) Paper and cardboard sent to this country during the first seven months of the year—8,184,685 cwts., of the value of £8,378,402—represented an increase of 625,335 cwts. (8·2 per cent.) over the corresponding period last year, whilst the value rose by £631,063 (8·1 per cent.). Of the various classes of paper received during the month, printings (448,523 cwts.) were the largest item, and constituted 34·2 per cent. of the total quantity, an increase of 48,614 cwts. compared with July last year.

* * *

Imports of Printings.

NEWFOUNDLAND was the largest supplier of printings during the month, with 180,317 cwts., a figure which shows the substantial advance of 26,212 cwts. upon July last year. Sweden took the second position with 89,254 cwts., and exceeded her figure of twelve months ago by 28,718 cwts. Smaller shipments were received from Finland (48,369 cwts.) to the extent of some 19,000 cwts.

* * *

British Paper Exports.

OVERSEAS shipments of British paper and cardboard last month—468,682 cwts.—reached the most satisfactory figure during the past twelve months, due principally to the bigger requirements of the Australian market. The month's total consignments, however, show a decline of 20,104 cwts. (4·1 per cent.) from the figures of July last year, but an increase of 193,017 cwts. (70·3 per cent.) over the figures for the corresponding month of 1923. The month's value (£846,937) shows a decline of £52,375 (5·8 per cent.) compared with July a year ago. Contrasted with July two years ago, however, last month's value was up by £267,221 (46 per cent.). Paper and cardboard exports during the first seven months of the year also present a favourable aspect. Amounting to 2,867,386 cwts., of the value of £5,612,704, they indicate an increase in quantity of 181,921 cwts. (6·7 per cent.) and of £385,683 (7·3 per cent.) in value. The two outstanding features of the export returns for July were the considerably increased shipments of printings and the greatly diminished quantity of packings and wrappings sent abroad.

Trade Notes.

FISHER BOOKBINDING CO. (1912), LTD.—The chairman and directors announce that they have appointed the secretary, Miss G. V. Woodman (daughter of the late managing director, Mr. E. P. Woodman), general manager of the company. This will necessitate Miss Woodman's closer attention to the inside working of the business. It has been decided to run the factory as a five-day shop, and the office and works in future will not be open on Saturdays.

ANNOUNCEMENT is made of the dissolution of partnership between F. Ashton and F. H. Bodoano, bookbinders' merchants and leather goods manufacturers, 44, Lloyd-street, Manchester, under the style of Lochead and Howard's Successors; also between H. Isherwood and J. Isherwood, paper manufacturers, at Simonstone Paper Mill, Simonstone, Lancaster, under the style of Isherwood Bros.—so far as regards H. Isherwood; also between F. W. Strickland and E. T. M. Sizer, under the style of the "Elite" Publicity (Hull) Service, at 25, Charlotte-street, Kingston-upon-Hull, publicity agents and publishers.

IN the matter of a petition for arrangement by Sir John Irwin, trading as S. Irwin and Son, of 120 to 122, Upper Abbey-street, Dublin, and Newbrook Mills, Rathfarnham, a preliminary meeting of his creditors will be held on Monday, the 24th inst., in Dublin, at which a statement of affairs will be submitted and an offer of composition made.

CHARLES MARSDEN AND SONS, LTD. — A shareholder of Charles Marsden and Sons who communicated with the senior official receiver in companies liquidation, has received a letter from the senior official receiver stating that the company's assets are being realised by a receiver for debenture holders, and that it is understood the possibility of a surplus becoming available for distribution in the liquidation is extremely remote.

THE annual meeting of the Belfast Printing House Football League was held at the Belfast Typographical Society Hall, with Mr. T. G. Porter in the chair. The *Irish News* football club and the Easonians (Messrs. Eason and Co.) were admitted to membership.

THE Gwynne Cup, competed for annually by members of the Bowls Section of the Sports Club of the *Morning Post*, has been won by Mr. J. Ballantyne, who beat Mr. W. Robb in the final by 21 points to 14.

FOR leaving a newspaper lying on the grass in Brockwell Park, S.E., Charles Dudley, of Brixton, was fined 5s. by the Lambeth magistrate. The prosecution was at the instance of the London County Council.

THE late Mr. Joseph Furze, of Sefton, Endsleigh-terrace, Tavistock, a director of the Tavistock Printing Co., and for 40 years superintendent of the Commercial Cable Co., Liverpool, left £17,260 (net personalty, £15,649).

THE late Mr. William Paul Blevin, of Liverpool, printer, left £6,053.

MR. HUGH N. LIVINGSTONE, of the *Glasgow Evening Times*, whose death was recently announced, has left £100 to each of seven of his colleagues on the staff of that paper, and £500 to the Newspaper Press Fund.

THE late Miss Annie Lawson Barlow, of 7' Fleet-street, Bury (a daughter of the late Mr. W. S. Barlow, printer, stationer, etc.), left estate of the estimated gross value of £10,068, and £8,146 net. Mr. Tom Gilbert Barlow, of 9, Belle Vue-terrace, Bury, printer and stationer, brother, and Miss Clara Barlow, of 7, Fleet-street, aforesaid, sister, are the executors. The testatrix left £100 each to her executors.

THE late Mr. George Clapperton (54), of Apsley, Paddox, Oxford, chairman and managing director of Cannon and Clapperton for some years, a director of Messrs. Charles Marsden and Sons, Ltd., the Ford Paper Mills, Ltd., and the Irish Paper Mills, Clondalkin, co. Dublin, and other companies, left £15,565.

THE *Falkirk Herald*, which was first published in 1845, has issued an 80th anniversary number.

A GROUP of journalists representing leading British newspapers arrived in Montreal on Saturday for a six weeks' tour of Canada, on the personal invitation of Mr. E. W. Beatty, president of the Canadian-Pacific Railway. The journalists will make a thorough investigation of economic industrial conditions.

THE Empire Press Union delegates arrived on Sunday night at New Plymouth, New Zealand.

THE IMPORTERS CO., LTD., have removed to 300, Moorgate Station Chambers, E.C.2. (Phone: London Wall 3023).

QUICK TYPECASTING.—The latest issue (May-June, 1925), of the *Monotype Recorder* has the usual interesting and informative collection of items that one associates with this well-produced periodical. An article that strikes our eye is one which refers to a claim recently made on behalf of the Monotype Typecaster that one of these machines had cast 112 lb. of 24-point type in three hours. It appears that Mr. E. G. Bausor, who is well known in the London printing trade, queried the possibility of this, and was given a private demonstration in which the Monotype people were able fully to substantiate their claim. In the article to which we refer there is reproduced a letter from Mr. Bausor in which that gentleman admits having been enlightened as to the capacity of the machine and bears witness to the fact that in his presence 112 lb. of 24-point type were cast, under what might be termed fair conditions, in ten minutes under the 3 hours. Mr. Bausor proceeds to tell how he has since carried out in his own works a test giving a somewhat similar result in speed of Monotype typecasting.

PRINTERS ON STRIKE IN CHINA —It is reported from Shanghai that nearly five thousand workers of the Commercial Press struck on Saturday last. This is a purely Chinese concern and the largest printing works in China, and prints thousands of educational works. The strike is entirely economic. Numbers of the employees work 11 hours a day for $10 a month, fines are frequent, and the conditions of labour generally bad.

COPIES of the *Shanghai Mercury* Emergency Edition published during the printers' strike have come to hand. They are in typescript and manifolded by machine, and not only are the leading articles and news produced in clear type with bold headlines, but the advertisements are well displayed, and there is even an effort at pictorial embellishment.

Craft Lectures.

A series of six technical lectures arranged by the Stationers' Company and Printing Industry Technical Board will be held at Stationers' Hall, Ludgate Hill, at 6 30 p.m. on the second Friday in the month from October, 1925, to March, 1926.

At the opening meeting on Thursday, September 17th, at 6.30, prizes will be presented to London printing students by Mr. James MacLehose, M.A., LL.D.

Admission is free to all members who are employed in the crafts represented by the Company. Tickets can be obtained on application to the Beadle at Stationers' Hall.

Institute of Journalists.

The annual conference of the Institute of Journalists opened, under the presidency of Mr. Frederick Peaker, at the University Examination Hall, Cambridge, on Monday.

In his presidental address Mr. Peaker commented upon the dangers arising from the modern tendency of big newspaper amalgamations. It was a tendency which the journalistic profession could not but view with great anxiety, he said

At the resumed conference, on Tuesday, Sir Robert Bruce, editor of the *Glasgow Herald*, was elected president for the coming year.

Japanese Printing Exhibition.

Under the auspices of the Japan Typothetæ an International Printers' Exhibition will be held at Tokyo, the capital of Japan, during April, 1926. The intention is to show to the Japanese public the latest developments in printing both in Japan and abroad by exhibiting all classes of posters, books, magazines, etc., collected from all over the world.

In the last ten years printing has made rapid strides in Japan, where most of the modern processes are to be found on an experimental, if not on a commercial, scale. But the Japanese are still some way behind other countries, and Mr. K. Ohashi, president of the Japan Typothetæ, who recently visited the Federation of Master Printers in London, has asked the Federation to collect samples of printing for his exhibition. He has already secured promises of specimens from America. The secretary of the Federation will be glad to receive work from members to forward to Tokyo.

INCOME TAX SIMPLIFIED. — This is a very useful and handy brochure, prepared by Mr. Arthur Fieldhouse and Mr. E. Ewart Fieldhouse. It is described as "the only popular presentation on the subject giving 75 pages at 1s. 6d." The publication is a practical guide to the preparation of the return for assessment and contains instructions for obtaining repayment of tax. An index gives ready reference to the valuable contents.

RAPID COPYING CO. (London). — J. W. Bennett, of 173, Fleet-street, E.C., was appointed receiver on July 30th, 1925, under powers contained in debenture dated September 17th, 1923.

Stinnes' Newspapers.

It is now officially announced that Stinnes' newspaper, the *Deutsche Allgemeine Zeitung*, which was reported to have been bought by the Prussian Government, has actually been acquired by a group of private persons for 3,000,000 marks. The negotiations were conducted for tne new owners by the paper merchant, Herr Walter Salinger, and the textile manufacturer, Herr August Weber. Included in the block of property which has changed hands for the price named are also the *Frankfurter Nachrichten* and large typographical works in Berlin which are understood to hold a long and profitable contract for printing the official Gazette of the Reich and Prussian Government.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Australian Notes.

Gordon and Gotch (Australia), Ltd.—Increased Profit for Half Year—Proposal to Increase Capital — William Brooks and Co., Ltd.—Undertaking's Outlook Improves—High Price of Books—Big Reading Public in Australasia—Problem of Postage Rates — New Companies—Queensland Printers and Overtime—English Publishers' Agent Sails for Europe—Newspaper Profits.

(From Our Sydney Correspondent.)

THE report of Gordon and Gotch (Australasia), Ltd., for the half-year ended March 31st shows a profit of £46,948 compared with £33,833 the previous half-year, and £23,437 for the corresponding six months of the previous year. With £801 brought forward, £47,016 is available. A dividend at the rate of 8 per cent. per annum on preference shares absorbs £4,000, at the same rate on ordinary shares, £16,000; a sum of £26,500 is transferred to the reserve (making £40,000 for the year), and £516 is carried forward.

Following the half-yearly meeting an extraordinary meeting of shareholders was to be held for the purpose of considering a proposal to increase the capital of the company to £600,000 by the creation of 100,000 new ordinary shares of £1 each.

ACCOUNTS of William Brooks and Co., Ltd., covering the year 1924, disclose net earnings of £4,083. That result is not as satisfactory as the board desired, but it is stated in the report that there has been a decided improvement in the outlook for the company, during the last six months. Gross trading profit was £66,099 and dividends from shares in other companies amounted to £227. With the sum brought in from 1923, there was available for appropriation a total of £10,483, from which the directors propose the payment of dividend at the rate of 7 per cent. per annum. That will absorb £4,547, and the remainder is to be carried to 1925.

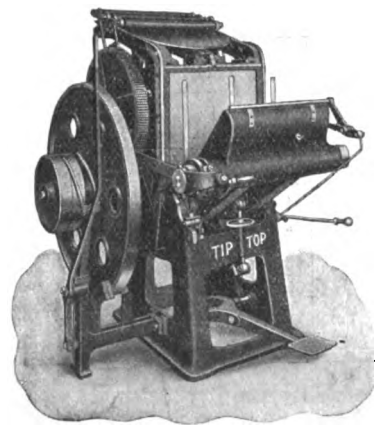
SINCE the 1924 account was closed, the directors have sold the company's Castlereagh-street property at what is stated to be "a satisfactory figure," which improves the company's financial position by about £30,000. The full benefits of that transaction will not be felt, however, for three years from April 1st last.

COMPLAINT of the high cost of books was made at the opening of the second annual conference of the Australian Book Sellers' Association, held in Melbourne. Mr. W. L. Raws, president of the Associated Chambers of Commerce, in extending a welcome to the delegates, expressed the hope that the conference would do something to bring the retail prices of books in Australia down nearer to the published prices. "The cost of distribution in Australia is high," he declared, "but I think the increased prices asked for books here is restricting the demand considerably."

A HIGH tribute to the reading capacity of the people of Australia and New Zealand was made during the sitting of the conference by Mr. George Robertson, of Sydney, who made the rather surprising declaration that the people of the two countries purchased five per cent. more books per capita than the people of any other land.

STRONG agitation has been coming forward in favour of a reduction in postage rates on books by foreign authors printed and published in Australia, it being urged that these rates should be the same as those charged on such books written by Australians. In furtherance of this agitation, a deputation from the Booksellers' Conference waited upon the Postmaster-General (Mr. Gibson). On behalf of the deputation, it was urged by Mr. George Robertson, representing the firm of Angus and Robertson (Sydney) that the works of British and American authors, if printed and published in Australia, gave employment to Australians, and so should be posted at the same rates as all-Australian books. Mr. Gibson declared that the adoption of such a suggestion would bring Australian rates below those of other countries, and said he did not think it could be done.

A RETURN to halfpenny postage for circulars was also urged upon the Postmaster-General, who promised to give the matter immediate consideration.



ACCORDING to a message from Auckland New Zealand, the business of the *New Zealand Herald* and *Auckland Weekly News* has been registered as a limited company, with a capital of £650,000, under the name of Wilson and Horton, Ltd.

AMONG those who are visiting Europe from Australia is Mr. H. Longden, the Australian representative of Messrs. J. Walker and Co., the English publishers.

THE Queensland Branch of the Printing Industry Employees Union of Australia has been giving consideration to the question of the limitation of overtime, following a recommendation of the Board of Management that, unless specially exempted by the executive of the branch for the purpose of meeting an extraordinary emergency, the number of hours of overtime which a member may work shall not be more than six in any one week, and not more in the aggregate than 18 hours in any four weeks.

THE principle of overtime work was generally condemned by the branch, but it was pointed out that although most desirable the difficulties of establishing a satisfactory system of overtime restriction in the industry were very great. The opinion was generally expressed that the operation of the recommendation was impracticable. This recommendation was not adopted at the meeting, nor was an amendment to the effect that overtime be entirely eliminated.

THE business arrangements in South Africa of Wiggins, Teape and Alex. Pirie, Ltd., have been amplified by the appointment of Mr. A. G. Booth, an expert from the Aberdeen Mills, as travelling representative for the Union.

"Tip-Top" Jobbing Platen

IS BUILT IN 4 SIZES.

Improved inking apparatus of the latest disc type. Platen is cast in one piece.

Camless drive of roller carriage.

Base and vertical bed cast in one piece.

Rigid, parallel impression.

Very handy an l simple impression regulator.

Throw-off of inking rollers.

Adjustable runner rails.

A Good Investment

The man who owns a Tip-Top Platen has the pleasing assurance that it will continue to serve him efficiently long after another platen would have to be replaced.

Even though he should use it twice as long as an ordinary platen, he knows he would still take pride in its performance and appearance.

His Tip-Top is an INVESTMENT that will yield from 50% to 100% dividends on the original cost.

And when he does dispose of it, its resale value will appeal to him as a further sound reason for purchasing another Tip-Top.

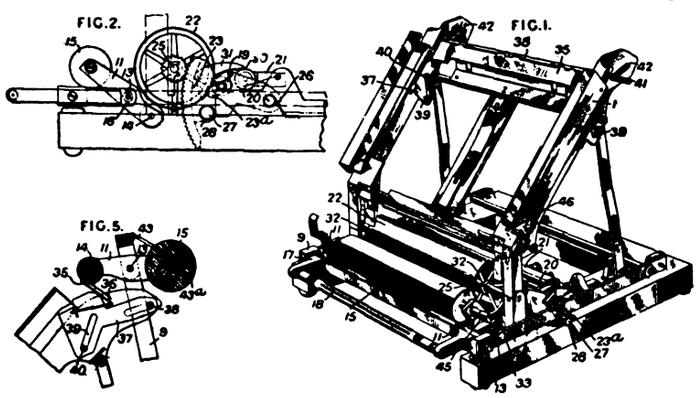
New Inventions

Driving Gear for Offset Machines.



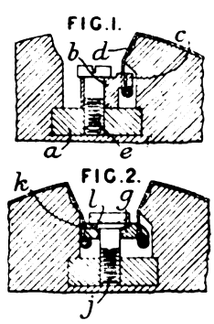
Under a patent by Linotype and Machinery, Ltd., driving-gear for a rotary offset printing-press of the type described in Specification 26195 12, comprises a wide gear 1, Figs. 1 and 2, on the shaft 2 of the first offset cylinders 3, engaging two substantially co-axial wheels 4, 5, of which 4 is fixed to the shaft 6 of the compression cylinder 7, and 5 rotates about a stationary hollow axis 8 fixed to the machine frame.

The wheel 5 also engages a wheel 12, Figs. 1 and 3 fixed to the shaft 13 of the second offset cylinder 11. In this arrangement the offset cylinders have a constant driving connection through the wheel 5 not affected by the movement of the impression cylinder away from the offset cylinders. Forme cylinders 14, 15, with driving wheels 16, 17, are driven by the wheels 1, 12, on the offset cylinders.

Inking Apparatus.

Mr. C. A. H. Bullock has patented an invention that relates to printing-presses of the kind described in Specifications 173,041 and 184,869, having an inking-roller and an impression-roller carried on the opposite ends of pairs of arms pivoted to a swinging frame and adapted to be brought alternately into contact with the type, provided with inking-mechanism of the kind comprising an intermediate roller arranged between a ductor roller and a distributing-drum and having its spindle mounted in

eccentric slots in oscillating plates whereby the distributing-roller is brought alternately into contact with the ductor roller and the distributing-drum. The inking roller 14 is carried by arms 11 pivoted at 13 to the oscillating frame 9 and receives ink when the frame 9 is at its lowermost position by contact with a distributing-drum 22, to which ink is supplied from a ductor roller 20 in a trough 21 by an intermediate roller 19. The latter is mounted in slots 23a in a pair of pivoted, toothed quadrants 23 gearing with pinions on the shaft 25 of the drum 22, so that when the quadrants are oscillated the intermediate roller 19 moves alternately into contact with the ductor roller 20 and distributing-drum 22 and the latter is also rotated. The quadrants are supported in normally raised position by a spring 26, and are depressed by contact of the swinging frame 9 with rollers 28 on pintles 27. On each upward movement of the frame 9, the ductor roller is rotated a small amount by means of a ratchet-wheel 30 engaged by a pawl 31 pivoted to one of the quadrants. Cam ends 32 on the drum 22 engaging rollers 33 on the frame move the drum endwise, and the drum is connected to its shaft 25 by a free-wheel device so as to be rotatable in one direction only. The inking-roller 14 carried by the arms 11 is normally held in contact with the type during the upward swing of the frame 9 by means of a spring 16 on the shaft 13, one end of the spring being secured to a frame 17 carrying a handle 18.

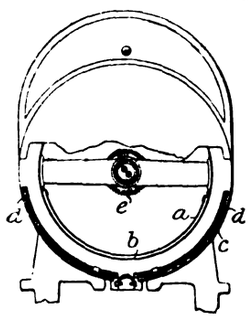


Cylinder, etc., Machines.—At the end of the upward movement of the frame 9 the arms 11, which carry the impression roller 15 at their other ends, are swung over by the lifting of the upper gripper flaps 35 to bring the impression roller 15 into position for contact with the type on the next downward swing. The arms 11 are held in this position by a pivoted catch 43 engaging a notch in one of the arms until rollers 45 on the shaft of the roller 15 enter guides 46 at the side of the machine frame and maintain the roller 15 in contact with the sheet to be printed. At this moment the catch 43 is released by contact of its curved extension 43a with the top of the machine frame.

Gripper Mechanism.—At the end of the upward stroke of the frame 9 the upper gripper flap 35, which is normally pressed against the lower flap by springs 36, is raised to receive the sheet by the action of studs 40 and cam slots 39 in a pair of plates 37 mounted on a rod 38 bridging the machine frame 1, the extremities 41 of the rod 38 projecting through slots 42 in the machine frame in the way of the arms of the frame 9. When the latter commences to move downward, the upper flap 35 is released and grips the sheet.

Securing Intaglio Plates.

Messrs. A. W. Penrose & Co., Ltd., and Mr. M. Owen have patented an invention whereby in an intaglio printing-machine having an engraved sheet secured to a cylinder, the leading end of the sheet is temporarily secured in a gap in the cylinder while the sheet is being wrapped thereon, after which both ends are engaged by drags



so mounted as to compensate for any difference in length between the sheets ends within the cylinder gap. The leading end d of the sheet is attached initially to hook members

b, secured by bolts e to the bed plate a in the gap and having hooks c engaging slots in the sheet end. When the sheet has been wrapped the cylinder, its slotted ends are engaged by drags g pivotally mounted on bolts j and positioned between the members b which are removed and replaced by drags g. The drags are formed with a spherical seating k for a similarly-shaped surface l on the bolt head, thus allowing for movement of the drag to compensate for any difference between the lengths of the ends of the sheet within the gap. Capping pieces, as described in Specification 223,757 and 233,554, may be used to fill the gap when the sheet has been secured.

Drying Stereo Matrices.

An invention by Mr. C. Winkler relates to a rotary drier for drying stereotype matrices, electric heating elements d encased in metal are arranged outside of the drum b carrying the matrix a, and naked electric

heating elements e are arranged within the drum. By this arrangement, the elements e need be switched on only during the actual drying periods, since they immediately radiate heat without loss of time involved in first heating a metal casing. The drum b rotates within a casing c.

ALLARDYCE & Co. Ltd.
PAPER
THE BLUE BOOK
MERCHANTS
83 Southwark St. London.

Every printer realises how important it is that his paper should be right.

To the Lithgrapher, however, the paper is of vital importance.

The ideal paper for LITHO IN COLOURS, VARNISHING and OFFSET LITHO is our ONE SIDED S/C LITHO – a new line which has met with instantaneous success.

It is a pure Esparto Litho Printing, with a semi-rough back, which prevents setting off, and is an advantage if required for pasting.

It is stocked in D. Crown, D. Demy and Royal. Other sizes will be added as required.

Paper and Board Consumer

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc,

Here and there are signs of a slightly increasing demand for paper of one sort and another. There is greater activity among printers as the autumn season sets in, and already the requirements of users of printed matter are coming forward for attention. Conditions at the mill end of the industry are not noticeably different from what they have been for the last few months. Generally there is a lack of making orders and practically all sections of the industry are affected. In the meantime, merchants are endeavouring to clear their stocks of paper to make room for fresh stocks on the new standards; and as there is still some uncertainty as to the course which future events will pursue, it is obvious that they will be reluctant to place large orders with the mills for some little time to come. The mills themselves are a bit doubtful regarding the outcome of the standardisation scheme; but it is up to them to force the issue as completely and as rapidly as possible in order to shorten the period of transition and hesitation.

* * *

Business has fallen off a little with some of the esparto mills, which formerly were able to secure all the orders they needed for their output. Price keenness has had a big influence on the esparto paper trade, and the odd eighth of a penny per lb. has in many cases been a weighty factor, even though that slight concession has been made possible only through a corresponding lowering in quality. Not all paper buyers are good judges of paper, though most of the experienced buyers in the wholesale houses certainly are. The average paper man does not exercise that fine discrimination which is essential in the judgment of esparto quality when eighths of a penny are at issue. Consequently, there is always an amount of chopping and changing about in esparto papers, and rarely is an order safe for repeat with any mill for any length of time.

* * *

One of the finest esparto mills in Scotland, probably the finest, realised some months ago that one of its leading lines in esparto papers did not return an adequate profit. Secure in the belief that quality would tell, the price was raised to a reasonable figure based on accurate cost recordings. Now, after a lapse of sufficient time to prove the results of the policy the price has been put back to its old level, which goes to show that there is a market price at which esparto papers will sell and a price at which they will not sell, regardless of improved quality standards.

* * *

Why do not esparto mills brand their papers, even though they are not watermarked, and whether they are supplied to the user direct or through the medium of the merchant? The user would be assured of something like uniformity where at present he cannot rely upon subsequent supplies being actually of the same make unless he buys from the mill direct. There is nothing to guarantee that a merchant will not change his mill for one making after another, and perhaps there is no reason why he should not do whatever he thinks best for his business. There is, however, a strong reason why the user should in many cases desire his standard lines of esparto paper to be kept standard. There is also as much reason for the mills that make esparto papers to name them and have that name retained in the open market.

* * *

This takes us to the matter of labelling paper, in which a distinct forward movement has been made by the agreement to have every parcel of paper bear a specification of its contents. Add to this a brand name label and we will be on the way to better methods in paper trading. It could hardly be credited, yet it is a fact, that a consignment of half-a-dozen different grades of paper arrived from one mill without any clue to the identification of quality, size, substance or anything else. Each ream had to be opened separately and in one or two cases scaled in order to know the contents.

Then, again, this question of labelling and branding, etc., is intimately connected with that of distribution. At present there are difficulties in the way of mill branding which are caused entirely by our methods of marketing paper. Some day paper will be put on the market in much the same way that certain textiles are, and it is a notable fact that the most successful fabrics on the market are those in which branding and distribution have been carried out on the lines advocated for paper. Unfortunately, there are so many self interests in paper, and such a complex mass of methods, that it seems well nigh impossible to re-organise. Standardisation of paper is a simple proposition compared with distribution. As with the former, perhaps the only manner in which anything will ever be accomplished will be by small instalments. Suppose, to begin with, the merchants and the mill that supply merchants could get together with the object of selling mill papers solely under mill brandings, supporting this with a definite agreement that making of paper for mills would in all cases bear a special discount not applicable to direct buyers; that would be a step forward in the direction of right distribution. The arguments against this policy come before us instantly, but they do not constitute a reason for not attempting to find ways of meeting and overcoming them.

* * *

Looking over a sample of a well-known cover paper in which rag fibres were intermingled with esparto and possibly a little soda wood, we were interested to note the way in which the rag fibres had absorbed the dye to a darker shade than the others. This was no detriment to the paper; rather it helps the mingled colour effect. What it did clearly was to demonstrate the lay of the fibres and the right and wrong side of the paper, indicate the direction in which the paper was made, emphasise the difference in fibre disposition on the upper and lower surfaces of the sheet, and show clearly which way the cut up sheet would fold without scoring. The student of papermaking knows all these things and looks for them; but the casual paper handler would perhaps not even bestow passing attention on such a matter. There is really the root of a long disquisition on papermaking in this simple case of a cover paper sample. Fibre lay is a factor which controls or at least influences strength, stretch, folding capacity, resistance, and practically everything else that matters in paper.

Paper at the Port of London.

The Port of London Authority gave notice that the landing rates on common paper and boards would be increased on and after August 1st as follows:—

Paper, printing, wrapping and toilet (other then medicated), in bales, cases or rolls.

Skip paper, in bales or bundles.

Wood pulp boards and cardboard, in bales or bundles.

Strawboards (except corrugated), leather boards and millboards, in bales or bundles.

If for immediate delivery: Landing rate, including sorting to marks and ranges of numbers and delivery to land conveyance within three days of first landing of parcel, 8s. per ton. Goods not removed in accordance with the terms of the landing rate will be charged on the landing and housing rate.

If for warehousing: Landing and housing rate, including sorting to marks and ranges of numbers, rent for 10 days from date of ship's report and delivery to land conveyance, 11s. per ton. Additional for delivery to water conveyance, 3s. per ton. Rent per week after 10 days, 7½d. per ton.

Rummaging for delivery to picked numbers is chargeable in addition.

All the above rates are subject to a reduction of 7½ per cent. The rent charge remains as before.

Enterprise

FOUR thousand years ago, there lived one Baalbazer, a Phoenician trader who plied his wares between Babylonia and Egypt. His markets grew, extending into Asia Minor, Greece, Spain, and even to Britain, because he recognised one very cogent trading factor; giving his buying communities *what* they wanted and sparing no trouble in *supplying* what they wanted. That's enterprise.

PROGRESS SERIES: No. 2. The Phoenicians, a race of Semitic origin, are recorded in history as the first commercial travellers. They lived by barter—selling and trading their merchandise with the peoples of Europe and Asia as far back as 2700 B.C.

It appears that their commerce with Britain dates from at least the 14th Century B.C.

In no less degree have the House of Winstone fostered that spirit. Through 77 years of trading they have made better and still better Printing Inks, Rollers (Litho and Letterpress), Sundries, time-cost-and-labour-saving specialities — everything to help the printer achieve better work with less anxiety.

The Curling of Fine Papers.

By H. H. HANSON.

INTRODUCTION.—Paper has probably curled since Fourdrinier Machines have been in existence, but it is only in recent years that the papermaker has had the matter called forcibly to his attention. The fact that curling is now so important is probably due mostly to the introduction of automatically-fed printing presses, the feeders of which cannot function if the sheets don't lie flat.

DEFINITION OF WORD CURLING AS USED HEREIN.—Curling has many manifestations all more or less related. In order to avoid confusion I am going to limit the main part of this talk to one kind of curling. The kind I am going to talk about is that which manifests itself in a rolled-up or turned-up edge and I choose this kind because it is fairly clean cut and probably the most common.

SOURCE OF DATA.—There will undoubtedly be some whose observations on curly paper will have been different from mine. I believe, however, that if we consider carefully the conditions under which our observations have been made, we will find our disagreements dissipated. My data has all been obtained in the manufacture of bond papers from sulphite and rag stock, machine, air and pole dried. The paper machines used have been standard Fourdriniers with suction couch-roll, two presses and a smoothing press or three presses.

DESCRIPTION OF CURLING EFFECT.—The time of development of the curl after the paper has been made varies considerably. Sometimes the edges will roll up as soon as the sheet comes off the cutters, sometimes the curl will appear gradually in the load as it stands in the finishing room, and sometimes the paper will apparently lie perfectly flat until the printer places it on the printing press. The first of these manifestations, where the edge curls up at the cutters as soon as the paper is free from restraint, I call "inherent" curl because it is apparently inherent in the paper as made. The second and third, where the curl develops more slowly, may also be at least partly inherent, but it requires some change in the condition of the paper before it begins to show up. We might call this the "delayed" curl.

As you have no doubt noticed, the direction of curl is almost universally the same on machine dried papers, namely, with the rolled edge in the machine direction and curling preferably towards the wire side. In the development of the causes of curling I have used this fact as a basis for analysis.

A Paper read at S.F. Division Superintendents' Association, Richmond, Virginia, P.A.

Fundamental Conditions Necessary for Curling.

DIFFERENCE IN LENGTH OF TWO SIDES.—Regardless of what brings it about, one fundamental fact is always associated with a sheet of curly paper, namely, that the concave side must be shorter than the convex side. To illustrate, let us consider two concentric circles. The circumference of the inside circle is always less than the outside one, no matter how small the distance between them. If we now imagine a sheet of paper rolled into a cylinder and look at the end section of the cylinder, we find two concentric circles represented by the inside and outside surfaces of the paper. Of course, the inside surface must be the shorter. A sheet of paper when curling tends to assume the shape of a cylinder, but only gets part way except in extreme cases. The curled shape being the natural shape, the concave side must be shorter than the convex side.

The difference in length of the two sides is not great. If we assume a sheet 8½ x 11 inches to have naturally the shape of a half cylinder, the 11in. direction being along the length of the cylinder, the difference in length of the two sides is only seven one-thousandths of an inch or about equal to the thickness of a sheet of 32 folio paper. We may therefore safely assume that curliness is due to something which makes the paper two-sided, terminating, when the curl has taken place, in the condition that one side of the sheet is shorter than the other. Since the curl is normally towards the wire side, we can further say that when curl has taken place, the wire side of the sheet is shorter than the felt side.

COHERENCE. — Before discussing the reasons why one side of a sheet of paper may be smaller than the other side, I wish to bring out one quality that paper must have in order that the causes of curling, whatever they may be, may get a chance to act. This quality I shall call "Coherence." To illustrate, let us consider two sheets of paper, one a blotter, the other a bond paper. The blotter is made from very free stock; it is fuzzy; it has comparatively little strength. Expressing all these points in another way, we may say that the individual fibres of a blotter are not very strongly bound together and each is free to move, irrespective of its neighbours, when for any reason it is put under stress. The sheet of bond paper, on the other hand, is made from well hydrated stock; it is beater sized, probably tub sized, and comparatively strong. In other words, the fibres are strongly felted together and strongly bound together by the gel or slime produced in beating and by the sizing. The individual fibres are not free to move, to contract or expand without affecting their neighbours, and thereby, the whole sheet. If when the sheet of blotting and the sheet of bond are exposed on one side to a condition under the influence of which the individual fibres shrink, the fibres of the blotter will simply pull apart from each other, but the fibres of the bond sheet, all shrinking together as a coherent unit, will cause the exposed side of the sheet as a whole to become smaller than the unexposed side. The result is a sheet of curly paper.

This factor of coherence is extremelv important. While it is not necessarily of itself a direct cause of curling, it is easy to see that if paper has two-sided qualities, increased coherence will produce increased curl. There is also the point that a sheet may be more coherent on one side than the other. This would be a direct cause for curling.

The Causes of Curling.

DRYING OUT OF ONE SIDE.—We now come to the real causes of curling. They are primarily, as we have seen, causes for two-sidedness in dimension. The first on my list is really the last to take effect, but it is very important, and some of the other causes are associated with it, so I bring it up now. It is the curl due to drying out of one side of a sheet.

Cellulose is hygroscopic. All paper contains more or less moisture, the exact amount depending directly on the humidity of the air to which the paper is exposed. We know that on a damp day paper feels soft and flabby, while on a dry day it feels hard and rattley. Translating this into figures, we find that on the damp day of, say, 75 per cent. relative humidity, paper will pick up 9 per cent. moisture if long enough exposed. On the dry day, of, say, 40 per cent. relative humidity, it will hold only 5 per cent. moisture.

Now suppose the sheet of paper of 5 per cent. moisture be tacked tightly to a board and exposed to a condition where it will absorb more moisture. We notice that the paper no longer lies flat, but gets bubbly and wavy. In other words, it has expanded and there is not room between the tacks for the flat sheet. If we dry it out again it returns approximately to its original condition, or in other words, it shrinks as it dries out. Now suppose a pile of paper containing 6 per cent. moisture, which is in equilibrium with about 50 per cent. relative humidity, be placed in a room of 30 per

Digitized by Google

THE BEST TRADING YEAR WE HAVE EVER HAD was the twelve months ending June 30 last. During that period we manufactured, sold, and delivered more machinery for printers than during any similar period throughout the long history of this Company—and it followed an exceptional year.

What it means: On the whole, the past twelve months have not been a particularly good year for the printing trade, so that the trade must have bought Linotypes and printing presses not so much on account of new business, but because it became really necessary to reduce costs by the installation of the latest and best labour-saving machinery.

That is the best endorsement the printing trade could have given of the quality and efficiency of LM products.

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON.

cent. relative humidity, the upper side of the top sheet will quickly dry out, whereas the bottom side will, for a time at least, be unaffected because it is not exposed. Of course, the result is that the upper side shrinks and the edges curl up. This is what very often happens in a print shop or finishing room to an apparently flat pile of paper. If the paper has a natural tendency to excessive shrinkage on the wire side, which it probably has, the condition of curl is very much exaggerated, because the wire side is usually the upper side. The wire side is also very often the side the printer likes to use because it is apt to be a little smoother than the felt side.

The usual humidity condition of a print shop in winter is between 20 per cent. and 30 per cent.; in other words, the air is very dry. Paper as shipped contains 4 to 7 per cent. moisture, the amount usually depending on the type of finishing operation and on the humidity to which the paper has been exposed in the finishing room. The 4 per cent. figure is approximately in equilibrium with a very dry room, but anything higher than that will dry out, and, if other conditions permit, will curl. From this it would seem that the thing to do is to always ship dry paper, but it isn't as easy as that, because in the summer time the print shop humidity is high and dry paper will show another kind of curl, namely, wavy edges.

TWO-SIDED FORMATION.—The Second on my list of causes is, "Two-sided Formation." If you examine carefully the two sides of a sheet of paper, you will find more fibres running in the machine direction on the wire side than you will on the felt side. A good way to prove this is to run some granite paper, where the coloured fibres will show it strongly. The explanation seems to be as follows: As soon as the stock leaves the apron and reaches the wire, a thin bottom layer of the sheet is quickly formed by the rush of water through a clean wire. This thin layer is held tightly to the wire by the weight of stock over it and it is therefore very little affected by the shake. It follows then that if the wire is travelling faster than the stock when the stock strikes it, and this is usually more or less true; these fibres on this bottom layer will tend to be pulled into the machine direction. At a given speed of the wire, the lower the head behind the slice, the worse will this result be.

What is the effect of this two-sided formation? Cellulose fibres, as we have seen, contract and expand as they give up and take on moisture. The expansion and contraction is largely in the diametrical direction; the change in the long direction is comparatively small. Thus as the two-sided sheet is dried, there is a tendency for the wire side to shrink more in the cross machine direction than the felt side. Actually it can't do this because the sheet is held firmly on the dryers and in the reel, but unless the fibres are pulled apart by their inability to shrink according to their desire, there will be a certain tension set up between the fibres on the wire side. At the first opportunity, which occurs when the paper is cut into sheets, the tension will take effect, pulling in the wire side and making the paper curl. The tension comes in the cross machine direction, making the curly edge in the machine direction.

TWO-SIDED ROSIN SIZING.—Next on the list is the "Two-sidedness of Rosin Sizing."

You have undoubtedly noticed that if paper has a slight tendency to be slack sized, it is always the wire side that shows it first. This is because the rosin size is forced off the bottom side of the sheet on the wire by the flow of water through the sheet and by the suction boxes and suction roll.

Rosin is, of course, waterproof and is put into the paper for that reason. The result then is that paper is more waterproof or moisture-proof on the felt side than it is on the wire side. This effects curling in three ways. First, it means that the wire side dries more easily on the paper machine, leaving a tendency for the wire side to be shorter than the felt side. Secondly, the wire side will be more sensitive to humidity changes and more liable to shrink out of proportion to the felt side in a print shop. Thirdly, if the sheet is tub-sized, the wire side will pick up more tub size than the felt side, which will be shown to be very important.

Two-sided Tub Sizing.—My next item is "Two-Sided Tub Sizing." Tub-size, such as glue, starch and the modified starches, all exhibit the same characteristics as cellulose, as regards humidity changes. They expand and take on moisture or contract with a loss of moisture, according to the conditions to which they are exposed. But the changes undergone by those materials, under the same humidity changes, are much greater than those of cellulose, especially the change in dimension. You all know that a flake of glue or grain of starch will swell to many times its volume if properly treated with water. You know also that a sheet of paper gummed on one side will curl itself into a cylinder as the gum dries.

Tub size is applied to the surface of paper in the form of a colloidal solution. It penetrates more or less into the interstices of the paper, depending on the time interval between dipping and drying. As the moisture evaporates, it leaves a film of gummy material, covering the surfaces and the individual fibres. This film is much more liable to changes in dimensions with changes in moisture content than the sheet of paper it covers. The film is, moreover, strong if thick enough and very coherent, so that as it changes dimensions, it pulls the paper with it strongly.

We have seen that if paper is tub-sized it will pick up more size on the wire side than on the felt side. Therefore a thicker, stronger film will form on the wire side when the sheet is dried. This is especially true of machine dried papers where the time for penetration and therefore for equalisation of the two sides and body of the sheet is very short. This fact, coupled with the fact that the felt side contains a greater amount of non-hygroscopic rosin, gives us another condition, whereby drying out of the paper will cause greater and more forceful shrinkage on the wire side.

The Pole Mark.—There is one more curling cause which applies, however, to pole dried paper only; that is the "Pole Mark." The tub-sizing operation expands paper in the cross machine direction about 3 per cent. During drying again, the paper naturally shrinks about the same amount providing it is not under restraint. As the bunch of 15 to 20 sheets of paper hangs over the pole, that portion of the sheets hanging below the pole does shrink unrestrainedly. The part lying over the pole, however, is held by the weight of the hanging side and the pressure of the upper sheets, so that it dries under a condition of stress and does not shrink its full quota. After removal from the loft, this part, which was over the pole is larger than it should be and the result is, a long bubble across the sheet. This bubble persists through the finishing operation. When the sheets are cut by the printer into such sizes as he wants to use, a new edge of the sheet may run along the bubble. If it does, the edge will immediately turn up, giving a curly effect.

Effect of Varying Coherence.—We have now found four causes for curling of machine dried papers and one extra one for pole dried papers. It is safe to say that these causes for curling are nearly always present in the paper to some extent. The print shop condition exists regardless of what the papermaker can do and he cannot help getting some two-sided sizing and probably some two-sided formation. If this is so, then why doesn't all paper curl? The answer is three-fold. In the first place, these causes for curling can be reduced to a minimum by careful operation; secondly, we have the factor of coherence, through which the causes act, and, thirdly, there are at least two operations of the machine which counteract curling.

Let us consider for a moment the factor of coherence. A piece of blotting paper may be two-sided in all its qualities and yet it doesn't curl. As we have seen, the difference between this and the bond sheet is in the binding material added to the paper in the form of beating slime, rosin sizing and tub sizing. These materials, in addition to two-sidedness, are necessary to give curly paper, and the extent to which they are present is therefore a large factor in the amount a given lot of paper will curl.

Prevention of Curl.

Pressing.—As stated, there are some normal machine operations which tend to counteract the tendency for curling towards the wire side. One of these is "Pressing." On the last press the felt side of the paper comes in contact with the felt and the wire side in contact with the smooth surface of the press roll. The tendency then is for the felt fibres and threads to push into the surface of the felt side of the paper, giving a very slight hill and dale effect. This tends to enlarge the surface of the paper and at the same time produces a tension on the fibres of that side, which endures to some extent in the dry paper. It counteracts the tension on the wire side caused by two-sided formation, sizing and drying. The more pressure and the coarser the felt used, the more marked will be the effect.

Finishing.—Another operation tending to stop curl is "Finishing." Calendering or any kind of finishing tends to break down the bonding films between fibres and also the felting strength. In combination with this effect it stretches out the wire side, if this side has a tendency to shrink more than the felt side, until the two sides are more nearly equal. On pole dried papers it neutralises the pole mark of ledges so that it is hardly noticeable.

Air and Loft Drying.—Any kind of loft or air drying serves to neutralise the two-sidedness and curling caused by tub sizing, by allowing time between the dipping and drying periods. During this time the size penetrates into the sheet and it may be said to form a single uniform film covering and permeating the sheet. Therefore it does not harm except in making the paper more coherent; in fact, it probably does some good by tying the two surfaces together, so to speak. Loft and air drying also permit the use of comparatively small quantities of rosin size, tending to cut down the two-sidedness and coherent effect of this factor. This does not mean that loft-dried paper won't curl because the pole mark factor is very serious, but it does show that air-dried paper is much less liable to curl than any other tub-sized paper.

In addition to such of these factors of compensation as we can use, it is evident that we must take every possible step with other qualities to decrease the natural two-sidedness and coherence which we normally get. If the paper contains sulphite pulp the pulp quality is of enormous importance.

Having taken all precautions in the raw material and manufacture it is finally important that the paper shall be shipped with a moisture content as near the average print shop conditions as possible.

Lithographers and their Paper.

The Research Department of the Lithographic Technical Foundation of America is investigating the subject of paper used by lithographic printers. Professor Reed, the head of the department, has issued a report on the subject and it is hoped soon to give to the lithograph business some information regarding the making, the seasoning and general handling of paper, which will, it is hoped, be a boon to the industry.

Professor Reed, in conjunction with some paper manufacturers, is going further into these experiments, with an idea, if possible, of waterproofing the fibre which constitutes a sheet of paper, and by rendering it impervious to the variations in humidity lead to the saving of much money which these variations cost the industry annually.

There were two fatal accidents in the paper, printing, etc., group of trades in July and two cases of lead poisoning in the printing industry.

The London School of Printing.

An Admirable Year Book.

"The Year Book of the London School of Printing and Kindred Trades" for the session 1924-25 is remarkable for the high character of the examples it contains, and should be quite a revelation to those in the trade who still look askance at the technical institutions for training the youth of the craft, and pin their faith to the practical work of the ordinary printing office. The "Year Book" is a collection of practical examples of the work of the students attending the London School of Printing at 61, Stamford-street, S.E.1, and serves well to show the high state of efficiency to which the teaching in this institution has attained, as well as the variety of work that is included in the curriculum, which ranges from hand and machine composition to the finest class of illustrative colour printing, one of the latter specimens being printed in eleven colours.

The examples, which are bound in stiff paper covers, with end papers, form an extremely interesting selection. The illustrations are specially worthy of notice and show a finish and style that could scarcely be excelled even in the most up-to-date commercial establishment and many of the designs are the work of the students themselves, the subjects ranging from line and half-tone blocks and woodcuts to the latest developments in two and three colour printing. The machining and register show excellent work, and indicate that the students are obtaining a thorough grounding in the technics of their art. There are also several specimens of marbling done by the binding classes that emphasise the practical training that is being given in this branch of the trade, the "zebra" and the "twisted blue shell" patterns being striking, while the "paste marble" is of a quiet and pleasing character. The specimens of composition embrace all sorts of work, circulars, folders, commercial work and what the comp sarcastically refers to as "solid dig," the latter being represented by reprints of interesting lectures given to the craft by experts, and also in several booklets, of which, perhaps, "Cambridge Printing," may be called an *edition de luxe*, it being beautifully printed and well got up on a fine paper.

Newspaper work is represented by the *School Chronicle*, which is an attempt to teach students how to make up a newspaper page, and contains an interesting leading article and an admirable advertising effect in the display columns. There are also a few posters done by the students and produced by typographic and lithographic methods, and of these the School poster for the coming session is an excellent example, in two colours, and shows good taste in composition and design. A word may be given to the artistic calendar that accompanies the "Year Book." It is a wonderfully fine reproduction of an unfinished pencil drawing by Mr. E. Herbert Whydale, and clearly demonstrates the possibilities of the photo-lithographic offset process as a means of reproducing delicate subjects.

No better testimony to the utility of the London School of Printing could be given than a reference to the amazing increase of the number of students enrolled for the various classes. In 1912 the total number was 350; by 1918 this number had increased to 700; in 1922 there were 1,506, whilst at the 1924-25 session, 2,324 students attended the classes. This great increase should be gratifying to the Principal, Mr. J. R. Riddell, and his numerous and efficient staff of technical helpers who have brought the School to its present state of efficiency. The premises are being enlarged and before next session a new storey will have been added, which will accommodate many of the students who have hitherto been unable to enrol through lack of space. It may be interesting to mention that the "Year Book" and other specimens of printing are enclosed in a cardboard container which has been designed, printed, "cut-out" and made up by the students of the School; and we also note that the success of the School in competing for prizes has been very good. This serves to show how the youths attending the classes are encouraged to attain a loftier appreciation of the dignity of their craft and to aim at the highest state of efficiency.

It is rumoured that Tamworth Paper Mill, one of the plants of Charles Marsden and Sons, Ltd., is changing hands.

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

CREDITORS of Charles Murchland, printer and publisher, *Herald* Office, Irvine, will receive a dividend, October 10th, within the offices of Messrs. Thomson, Jackson, Gourlay, and Taylor, 24, George-square, Glasgow—says the *Edinburgh Gazette*.

A RUMOUR, circulated last week, that an offer of £5 per share had been received from Nobel Industries, Ltd., has been denied by the managing director of the Winterbottom Book Cloth Co.

THE *Hexham Herald* will in future be published from the printing works of Messrs. J. Catherall and Co., Beaumont-street, Hexham, on Tuesdays instead of Fridays. The *Hexham Courant* will also be published from the same office, but each paper will retain its own staff and individuality.

MR. W. S. BREWER, the proprietor, announces that the *Pembrokeshire Herald*, Haverfordwest, has been suspended, but that the jobbing printing works, which have recently been improved and extended, will continue under the same name.

MESSRS. J. COLLIS AND SONS will in future carry on business in their own name at Sunbury Common, Middlesex, having purchased the Sunbury Works, plant, machinery and stock-in trade belonging to Messrs. Ewart and Collis, Ltd. (in voluntary liquidation).

IN the Vacation Court on Wednesday of last week, before Mr. Justice Finlay, the British Broadcasting Co., Ltd., sought an interim injunction to restrain the *Wireless League Gazette* Publishing Co., Ltd., from infringing the plaintiffs' copyright by printing their weekly programmes in the defendants' publication, the *Wireless League Gazette*. The Judge said he felt he would not be justified in granting the order asked for. He felt some doubt whether the most meritorious work of the B.B.C. in the arrangement of their programmes was the subject of copyright, and he further felt a doubt as to whether, assuming that there was a copyright, there had been any breach of it. Therefore he would not make any order, but there should be a speedy trial so that the matter might be disposed of

THE first party to visit the new premises of the Bradford and District Newspaper Co. consisted of members of the Brighouse Engineering Society. Numbering about 30, the visitors were received on Saturday afternoon by Mr. H. C. Derwent (general manager), who explained the lay-out of the building. After the chief features of the mechanical appliances in use had been indicated, the visitors were photographed, and were then shown through the various departments by the general manager, who was assisted by Mr. J. W. Teale, Mr. Fred Skirrow, and Mr. Sidney Otty.

THE employees of Messrs. E. J. Arnold and Son, Ltd., printers, Leeds, were on Saturday entertained to a charabanc outing to Knaresborough by the proprietor, Mr. E. George Arnold, in celebration of the wedding of his son last week at Oslo. Tea was served at Knaresborough, during which Mr. L. J. Swaine expressed thanks to Mr. Arnold on behalf of the employees. Mr. Cecil Wright, who was the best man at the wedding, joined the company at tea.

MR. CHARLES WILLIAM BROCK, who has died at Leeds in his 80th year, had been previous to his retirement about three years ago on the composing-room staff of the *Yorkshire Post* for nearly 50 year.

ANOTHER old-time member of newspaper printing circles, has passed away in the person of Mr. E. J. DIXON. He was for over 30 years on the composing staff of the *Newcastle Journal*.

MR. JOHN MURDOCK, whose death at Leslie is announced at the age of 90, was formerly employed at Strathendry Paper Mills.

MR. FREDERICK LAW ARMSTRONG (51), Camberwell, S.E., general secretary of the Newspaper Society and of the Employers' Federation of Envelope Makers and Manufacturing Stationers, left £4,201 (net personalty £4,055)

THE late Mr. Edward Albert Coffin (otherwise Humphreys), of Ladbroke-grove, W., member of the staff of the *Sporting Life and Sportsman*, left £3,801.

AN International Exhibition of Professional Photography opened to the public on Monday at Princes Galleries, Piccadilly. It marks the centenary of photography—reckoning the practical beginning of the art as dating from the year 1825, when Daguerre first obtained important results from his experiments. The Exhibition is truly international in scope, and is regarded as the best and most representative of the kind yet held.

SIR CHARLES HIGHAM will deliver an address at the Old Colony Club, Aldwych House, Strand, on Wednesday evening, September 30th, on "Should the Government Spend a Million Pounds on Advertising?" The chair will be taken by Lieut.-Col. E. F. Lawson, chairman of District 14 of the Associated Advertising Clubs of the World.

THE Publicity Club of London entertained the Publicity Clubs of Yorkshire to a cricket match the other day, and, notwithstanding the strong eleven fielded by London, Yorkshire won by a narrow margin, due in the main to some fine bowling by J. E. Bennett, of Bradford.

A LUNCHEON was given at Wellington (N.Z.) on Thursday by Mr. Coates, the Prime Minister, to the visiting British members of the Empire Press Union. Viscount Burnham was the principal speaker on behalf of the delegates.

A MOVEMENT has been initiated in New Zealand for the starting of a Welsh monthly newspaper for Australia and New Zealand, the prime mover being a young journalist on the staff of the *Christchurch Times*.

THE Chunghua Book Co. is one of the firms affected by the spreading strike movement in Shanghai, and has been compelled to grant large wage increases.

PRINTING presses, printing ink and type are free of customs duty on importation into Barbados.

DURING April, imports of paper and paper articles into Lithuania represented 562.4 thousand lits.

WAGE INCREASES.—An analysis of the wages now paid in nine principal industries comprising 19 representative trades, with the corresponding rates for July, 1914, is published by the *Daily Mail*, whose figures reveal that the average increase is 90·3 per cent. above the pre-war level even after including the returns for shipbuilding and engineering, in which the advance is only from 34 to 45 per cent. The Ministry of Labour cost of living figure for this month is 73 per cent. above that for July, 1914. Figures relating to the printing and allied trades in 27 large towns indicate that these trades are well up in the list as regards wage advances. Hand compositors and machine minders on book and jobbing work are credited with an increase of 107, and bookbinders and machine rulers with an increase of 116.

MONOMARKS.—An interesting batch of literature comes from British Monomarks, Ltd., 19, Abingdon-street, Westminster, S.W.1. In addition to brief descriptions of the scheme and particulars concerning subscriptions, there is a nicely printed pamphlet entitled "The Miracle of the Monomark," giving fuller details. The William Morris system of monomarks is a discovery which, it is said, will revolutionise the marking of goods. It goes further than that, however, since it aims at guaranteeing an absolutely unduplicated mark to every individual and firm. The usefulness of monomarks is limitless.

AN informative article on Claude Garamond takes first place in the new issue of the Linotype and Machinery *Record*, which is admirably printed by Mr. Geo. W. Jones, and forms a fine example of Linotype-set magazine work. Typographically the number gains interest from the rather startling use of borders built up of new Linotype ornaments designed by Messrs. Guido and Lawrence Rosa, of New Jersey. One feature, by the way, which we would not desire to see widely copied is the surrounding of initial letters by masses of ornamentation widely removing them from the lines to which they belong.

The FINAL PLATE MOUNT
(WESEL PATENT)
Provides absolute security to every user throughout every press run.
Particulars describing and illustrating the principle and operation of the Final Plate Mount and Hook from Sole Distributors—
THE NICKELOID ELECTROTYPE CO.,
10, New Street Hill, London, E.C.4.

Trade Union Matters.

T.A. AND PRINTING FEDERATION.—At the annual conference of the South Wales group of the Typographical Association, held at Brecon, a resolution was passed unanimously on a proposal that a ballot of the whole Association be taken on the question of terminating the alliance with the Printing and Kindred Trades Federation.

T.A. AND DEFAULTING MEMBERS.—At a recent meeting of the Executive Council of the Typographical Association, a report was read from the secretary of the Harrogate branch that he and the branch president had visited Ripon with the object of inducing several men employed there to rejoin the Association. Although several were interviewed individually, and arrangements made for a meeting, the men refused to attend. The secretary had since written to each ex-member, but about half had replied that they did not intend to rejoin the Association, and the branch committee considered that further efforts would be useless.

SUNDERLAND PRINTER AND T.A. FAIR LIST—Consequent upon a recent decision of the Executive Council of the Typographical Association that the proprietor of a Sunderland printing office who desired to be placed upon the "Fair List" of the Association must employ a member permanently, the secretary of the Sunderland branch has forwarded to the Council a letter from the proprietor appealing against the condition, but the Council have decided that as the office does not conform to the Association conditions the appeal must fail.

NON-UNION LABOUR AT WORCESTER.—The general president of the Typographical Association (Mr. J. D. French) has reported to the Executive Council that he recently visited Worcester and met the proprietor of a newspaper office, with whom he discussed the question of non-union labour in the machine-room. The proprietor declined to bring any pressure to bear upon the men to join, but promised that if they did so he would not object. Mr. French later addressed the men, and he reported that his visit had done good.

SCOTTISH PRINTING AND PAPER WORKERS.—With a view to augmenting the local benevolent fund of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, a successful sports meeting was held on Saturday at Bridgend Park, Denny. The Denny branch had the assistance of the Kelvindale branch, members of which travelled from Glasgow in order to assist the local effort. A varied list of athletic events was arranged and made up an attractive programme. After paying all expenses, the benevolent fund will benefit to the extent of about £15. The draw for a gold watch was won by Mr. William Davidson, one of the visitors. In the presence of some 1,000 spectators Miss Lothian, the West of Scotland organiser of the Union, presented the prizes at the close of the meeting.

A WELL-ILLUSTRATED article on "Recent British, Canadian and American Posters," by Sidney R. Jones, is one of the features of interest to printers in the August issue of the *Studio*, the magazine of fine and applied art.

LONDON COUNTY COUNCIL
LONDON SCHOOL OF PRINTING
AND KINDRED TRADES
Day & Evening Classes
Courses of Instruction arranged to suit those desirous of improving their position in the Printing and Kindred Trades, including:
MECHANICAL COMPOSITION: LINOTYPE AND MONOTYPE COMPOSING . READING . LETTERPRESS MACHINE PRINTING INKS . LITHOGRAPHY . PHOTO-LITHOGRAPHY . STEREOTYPING AND ELECTROTYPING TYPECASTING . METALLURGY . SCIENCE . BINDING BOOKFOLDING . ORDER CLERKS, WORK . WAREHOUSE PAPER . GENERAL KNOWLEDGE . PRINTERS' SALESMANSHIP . BOOK CRAFTS . ADVT. WRITING AND DESIGN
Day Classes: 9 a.m. to 1 p.m., 2 to 6 p.m. Evening Classes: 6 to 9 p.m. Full particulars can be obtained on application to the School Office, which is open from 10 a.m. to 5 p.m., and until 8 p.m. from Monday, 14th Sept., 1925. Telephone: Hop 409. Early application should be made for enrolment.
The next Session commences on Monday, 21st September, 1925
with increased accommodation and additions to plant and staff
61, Stamford Street, Blackfriars, S.E.1.

Australian Notes.

Government Printing Office and Labour Conditions—Government Printery Dismissals—Directory Advertising Revenue—New Company—Libel Actions—Printing Works Accident.

(*From Our Sydney Correspondent.*)

THE question of whether wages and conditions in a Government printing office are subject to regulation under the Conciliation and Arbitration Act has been raised in respect of New South Wales. The Deputy-President of the Federal Arbitration Court has refused the application of the New South Wales State Government for the exemption of the Government Printing Office from the printing trades award. The State has members of the Printing Industry Employees' Union in the Government Printing Office, Department of Lands, Registrar-General's department and Department of Public Works, but it maintains that those employees are not engaged in an industry within the mea ing of the Commonwealth Conciliation and Arbitration Act; that they are engaged in carrying out governmental functions, and that the court has no jurisdiction to make an award regarding those employees.

THE Deputy-President, in declining to state a special case, as requested by the State, said the High Court had decided that States and persons naturally or artificially representing States when parties to industrial disputes were, in fact, subject to Commonwealth legislation under section 51 of the constitution if it applied to them on its true construction. His Honour was satisfied that the Government printing office was an activity that was within the principles definitely decided by the High Court.

RESENTMENT has been aroused by the fact that seventeen compositors, members of the Printing Industry Employees' Union, have been dismissed from the Government Printing Office on the plea that there is a shortage of work. Although the men were rated as casual employees, some of them had been in the department for many years, and they feel that they have been discriminated against. Married men have been given notice, and single men retained. In some cases newcomers have been kept on at the expense of the older hands.

THE annual report of the Postmaster-General's Department shows the magnitude of the revenue for advertisements in the Sydney and Melbourne Telephone Directories. The contract for the sole right for advertising in these books for five years brings in £54,260.

AMONGST new company registrations is that of the Ebsco Patents Pty., Ltd., which has been formed to acquire and carry on the business of handling, selling, hiring and manufacturing the Ebsco Patent Rotary Printer in Victoria and Tasmania. The capital is £30,000 in £100 shares.

THE Chief Justice entered judgment for defendants, with costs, in an action for alleged libel in which the Minister of Customs, Mr. Herbert Edward Pratten, was plaintiff, on a claim for £10,000 damages against the Labour Daily, Ltd., of Sydney, and Mr. H. A. Hunter, publisher. The Chief Justice, Sir William Irvine, presided, and there was a special jury of twelve. The case turned upon the difference between permissible political criticism and personal libel. The jury deliberated three and a half hours.

AN action in which £5,000 was claimed as damages for alleged libel by Charles Caylock, of Glen Huntly, horse trainer, against Sun Newspaper (Melbourne), Ltd., was down for hearing before the Chief Justice, Sir William Irvine, and a jury of twelve, in the First Civil Court. Settlement was come to out of Court. It was agreed that the £250 paid into court by defendant should be paid out to plaintiff as part of the settlement in the case.

IN a case at Sydney, Raymond Warwick, a minor, claimed £500 compensation from Albert William Brown, trading as the Boston Press. The declaration, alleging negligence and breach of the Factories and Shops Act, set out that the plaintiff, a youth under 16 years of age, while employed in the defendant's factory, was improperly allowed to oil the milling gear attached to a certain printing press, and that while so engaged the gear fell upon his hand, causing such injury and mutilation that portions of it had to be amputated. The defence was a general plea of not guilty. The jury returned a verdict for the plaintiff for £50.

Government Contracts.

Contracts were placed with the following firms during July:—

H.M. Stationery Office.

ENVELOPES.—Chapman and Co., Ltd., London, S.W.; McCorquodale and Co., Ltd., Wolverton; Millington and Sons, Ltd., London, N.; Pirie, Appleton and Co., Ltd., Aberdeen; Livingstone Bros., Glasgow.

PAPER, CLOTH LINED.—A. E. Mallandain, Ltd., London, N.W.

PAPER OF VARIOUS DESCRIPTIONS.—J. Brown and Co., Ltd., Penicuik; J. Baldwin and Sons, Ltd., King's Norton; Basted Paper Mills Co., Ltd., Basted; Busbridge and Co. (1919), Ltd., East Malling, Caldwell's Paper Mill Co., Ltd., Inverkeithing; Carrongrove Paper Co., Ltd., Denny; E. Collins and Sons, Ltd., Glasgow; R. Craig and Sons, Ltd., Airdrie; Crompton Bros., Ltd., Bury; J. Cropper and Co., Ltd., Kendal; J. Dickinson and Co., Ltd., Hemel Hempstead; Fisher and Co., Ltd., Tamworth; Ford Paper Works (1923,) Ltd., Hylton; P. Garnett and Son, Ltd., Otley; Golden Valley Paper Mills, Bitton; J. B. Green and Son, Maidstone; Hollingworth and Co., Maidstone; W. Howard and Son, Ltd., Chartham; Imperial Paper Mills, Ltd., Gravesend; W. Joynson and Son, St. Mary Cray; London Paper Mills Co, Ltd., Dartford; C. Marsden and Sons, Ltd. (Receiver for), Tamworth and Barnsley; National Paper and Pulp Co., Ltd., Loudwater; New Northfleet Paper Mills, Ltd., Northfleet; Olives Paper Mill Co., Ltd., Bury; Portals, Ltd., Whitchurch; Ramsbottom Paper Mill Co., Ltd., Ramsbottom; Roughway Paper Mills, Ltd., Tonbridge; Ryburndale Paper Mills Co., Ltd., Ripponden; T. H. Saunders and Co., Ltd., High Wycombe; Smith, Anderson and Co., Ltd., Leslie; R. Sommerville and Co., Ltd., Creech St. Michael; St. Neots Paper Mill Co., Ltd., St. Neots; E. Towgood and Sons, Ltd., Sawston; Waterside Paper Mill Co., Ltd., Darwen; Watsons, of Bullionfield, Ltd., Bullionfield; Wiggins, Teape and A. Pirie (Sales), Ltd., Stoneywood, Hele and Devon Valley; Yorkshire Paper Mills, Ltd., Barnsley.

RECORD CARDS.—Spicers, Ltd., London, S.E.

TAGS, INDIA.—G. Hughes and Co, London, N.

WAXED STENCIL PAPER.—Ellams Duplicator Co., Ltd., Bushey; D. Gestetner, Ltd., London, N.

Crown Agents.

CABLE, PAPER INSULATED, ETC.—W. I. Glover and Co., Ltd., Manchester.

PAPER.—J. Dickinson and Co., Ltd., London, E.C.; Olives Paper Mill Co., Bury, Lancs.

STATIONERY, ETC.—Waterlow and Sons, Ltd., London, E.C.

George Mann and Co., Ltd., Outing.

On Saturday last the staff of the London works of Messrs. George Mann and Co., Ltd., held their annual outing at Brighton.

The journey was made by charabanc under ideal weather conditions, and a party of about 50 assembled at 1 p.m. for lunch at the South Coast Creamery. After an excellent meal, the managing director, Mr. George Wichmann, made a particularly appropriate speech, to which a response was given by Mr. H. Tongue. Several photographs were then taken, and the party dispersed to participate in the many and varied attractions of the seaside resort.

A very pleasant run back to town in the cool of the evening brought the conclusion of a very happy occasion.

THE Board of Education have agreed to a continuance next year of the first grade examination in papermaking under the auspices of the City and Guilds of London Institute.

Bradford Firm's Expansion.

The Bradford and District Newspaper Co, Ltd., has changed its headquarters, and the *Yorkshire Observer*, the *Bradford Daily Telegraph*, the *Yorkshire Observer Budget*, *Yorkshire Sports*, and the *Keighley News*, all of which are controlled by the company, are now published from Hall Ings and Drake-street, Bradford. The company's newspapers published admirable special issues last week, excellently recounting the history of the concern and indicating the big improvements in accommodation and equipment which the move to new premises involves.

The new composing-room has an area of 4,700 square feet, and includes thirty-two composing machines, comprising linotypes and intertypes. For the process of moulding, the mangle was supplied by Linotype and Machinery Limited, and the moulding press by Messrs. W. J. Light and Co. (Winkler, Fallert and Co.). The machine-room contains five of the most up-to-date presses, three by Linotype and Machinery Limited, and two by R. W. Crabtree and Sons, Ltd., of Leeds. Each of these is capable of turning out 40,000 copies per hour of a twelve-page paper, printed, folded and counted. Another interesting item in the equipment is the two-colour rotary contents-bill machine built by Messrs. Crabtree. This machine prints contents bills from curved wooden type at a speed of about 20,000 per hour. In the stereo foundry, there are two double casting machines, one by Linotype and Machinery Limited, and the other by R. W. Crabtree and Sons, Ltd. Each of these machines is capable of turning out four plates a minute.

The firm now claims that there are no finer newspaper premises or equipment in the country than those of the Bradford and District Newspaper Co.

Employment in Paper and Print.

The official report to the Ministry of Labour for July states that in the paper trade employment generally continued fair. Short time was reported in a few districts, particularly in the brown paper and hand-made sections.

With letterpress printers employment continued fairly good; in Birmingham it was slightly worse compared with the previous month, but in London, Manchester, Edinburgh and Glasgow there was an improvement. Employment with electrotyers and stereotypers continued good.

Employment in the lithographic printing trade was again fairly good; it was better than in June at Manchester and Glasgow, but was slightly worse at Birmingham. With lithographic artists employment was good in London, but slack, and worse than in June, at Manchester.

In the bookbinding trade employment on the whole was moderate and remained about the same as during the previous month; some short time was reported at several centres, including London and Edinburgh.

The percentage of unemployed among workpeople covered by the Unemployment Insurance Act in the printing and bookbinding trades was 4·6 at July 27th, compared with 4·9 at June 22nd and 4·9 at July 28th, 1924. In the paper and paper board industry, the percentage was 6·9 at July 27th, against 6·7 at June 22nd and 6·6 at July 28th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 5·8 at July 27th, compared with 6·2 at June 22nd and 6·6 at July 28th, 1924.

DOLE OR SUBSIDY: F.B.I. VIEWS. — The Federation of British Industries have issued a report on the proposals which have been made in many quarters for subsidising industry for the relief of unemployment. The Federation have for a considerable time had a committee examining this subject, and have reached the conclusion that no subsidy scheme of a general character applicable to a large number of industries is possible. They are also inclined to be dubious as to the advantages of partial schemes especially adapted to particular trades, though they register their opinion that if suitable organisations could be devised for full and rapid consideration of the circumstances, the grant of occasional and temporary subsidies might prove of value in providing employment.

Necrology

Mrs. Harmsworth.

We regret to announce that Mrs. Harmsworth, mother of the late Lord Northcliffe and of Lord Rothermere, died on Saturday at Poynter's Hall, Totteridge, at the age of 86. At the age of 26, she married Mr. Alfred Harmsworth, then a master on the staff of the Royal Hibernian School, Dublin. Three years later Mr. and Mrs. Harmsworth moved to London, where Mr. Harmsworth was called to the Bar in 1869. Mr. Alfred Harmsworth died in 1889 at the age of 52. The eldest son, Alfred Harmsworth, afterwards Viscount Northcliffe, was then near the beginning of his journalistic successes, and his prosperity became his mother's. Thenceforward, first in the house in London, which Lord Northcliffe and Lord Rothermere bought for her, later in her home at Poynter's Hall, Totteridge, she lived into old age, respected by her friends and revered by her children. Mrs. Harmsworth is survived by seven sons—Viscount Rothermere, Mr. Cecil Harmsworth, who was for some years Parliamentary Secretary for Foreign Affairs; Sir Leicester Harmsworth, Bt., Sir Hildebrand Harmsworth, Bt., Mr. St. John Harmsworth, Mr. Charles Harmsworth, Mr. Vyvyan Harmsworth, and by three daughters, Lady King, Mrs. Wild and Mrs. Burton. The funeral took place at St. Marylebone Cemetery, East Finchley, yesterday (Wednesday).

Miss M. F. Billington.

The death occurred in London on Thursday of Miss Mary Frances Billington, for many years a member of the staff of the *Daily Telegraph*, after previous experience on the *Echo* and the *Daily Graphic*. Miss Billington, who was one of the pioneers of journalism for women, was one of the founders of the Society of Women Journalists, of which she was president from 1913 to 1921, being succeeded by Viscountess Northcliffe. In 1920 she was the official representative of the society at the Imperial Press Conference in Canada, and recently she was nominated for the conference about to assemble in Australia, but her health did not permit her to travel. The remains were interred on Monday beside those of her father and mother in the churchyard at Chalbury, Dorset. Among many who sent floral tributes were: Viscount and Viscountess Burnham, Viscountess Cowdray, Lieut.-Col. and Mrs. E. F. Lawson, women journalist colleagues of Fleet street, the Society of Women Journalists, Empire Press Union, the Cowdray Club, the proprietors of the *Daily Telegraph* and the editorial staff of the *Daily Telegraph*. A memorial service was held at St. Bride's Church, Fleet-street, E.C., on Tuesday, when the congregation was representative alike not only of various institutions identified with London journalism, but of organisations devoted to social work in which Miss Billington took deep interest.

Funeral of Mr. F. J. Hall.

The funeral of Mr. F. J. Hall, Controller of the Oxford University Press, took place on Thursday. The first part of the service was held in the Church of St. Michael and All Angels, Summertown, and was conducted by the Rev. H. R. Hall (brother), the Rev. H. S. Carpenter, and the Rev. V. C. Roberts.

Among those present were:—

The President of Trinity (representing the vice-Chancellor), the Mayor of Oxford, several delegates of the University Press, Mr. R. W. Chapman (secretary to the Press delegates), Mr. Humphrey S. Milford (Publisher to the University), Mr. W. Lewis (Controller of the Cambridge University Press), Captain Cumberlege (representing the Oversea branches of the Oxford University Press), several representatives of the London publishinghouse, Mr. C.M.Cross (representing the Master Printers' Federation), Councillor F. F. Vincent (President, Oxford Master Printers' Association), Mr. F. S. Thornton (Oxford branch, Associated Booksellers), Mr. G. F. Jones (representing South-Western Alliance of Master Printers) and the heads of departments of the Oxford University Press.

The burial took place at Wolvercote Cemetery.

SALE BY AUCTION.

Clearance Sale for Rebuilding Purposes.

6, 6a, and 25, Field Street, King's Cross Road, London, W.C.1.

Mr. EDWIN W. EVANS

is favoured with instructions to SELL BY AUCTION, on the Premises, 6, 6a, and 25 Field Street, King's Cross Road, London, W.C.1 on Tuesday and Wednesday, 15th and 16th September, 1925, at Eleven a.m. each day,

the Valuable New and Nearly New Letterpress, Stereotyping, Bookbinding, Lithographic and Box-Making Plant and Machinery,

comprising:—

Letterpress Plant: Model 1 Linotype, Quad Demy Century, Double Crown Stop-Cylinder Press by R. Hoe & Co, 3 Quad Demy Wharfedales, Demy Bremner Wharfedale, New Foolscap Folio Hewitt Safety Platen, Half Super Royal Colt, Crown Folio Chandler & Price Platen, Crown Folio Minerva Platen, Foolscap Folio Arab Platen, Foolscap Folio Minerva Platen, New No 3 Hewette Platen 11 by 7½in. No. 2 Gem Platen 11 by 7in., 10in. Self Inking Galley Proof Press, McCullum Proof Press, 7 Roller Galley Proof Presses, 4 Lever Galley Proof Presses, Double Royal and Double Crown Columbian Presses, 2 Super Royal and Crown Folio Albion Presses, New 48 by 31in. Iron Imposing Surface, Sheet Iron Galley Racks, 5 Iron Inking Tables, 80 Cast Iron Mounting Boards, Chases, 300 New Galleys, 75 Founts of Wood Letter, 200 Cases Point Type, 220 Doz. New Hempel Quoins, 150 Doz. New Wickersham ditto, large stock of new Shooters, Pick Brushes, Composing Sticks, etc, 50 Gross New 1½-point Brass Rule, 1 Ton New Leads.

Electro and Stereotyping Plant: New Hot Press, Platen 37 by 24in., 5ft. 3in. Bed, 3 Hydraulic Presses, Facing Lathe, New Flat Planing Machine, 18 by 24in. Surface, New Radial Arm Flat Routing Machine, New Type Toggle Press, New Power Bevelling Machine, 2 Combined Drill and Jig-Sawing Machines, 8 New Edge Planing Machines, Rotary Hand Planing Machine, Power Circular Saw Bench, 27in. Rotary Plate Dressing Saddle, 3 New Balanced Stereo Casting Boxes, 5 New Stereo Casting Boxes, Stereo Furniture Casting box, 5 Shooting Beds and Planes, 18in. to 28in., New 5-cwt., two 3-cwt, and one 1-cwt. Melting Pots, 9 Ingot Moulds, 5 double-handle Ladles, etc.

Binding Plant: Quad Crown 3-fold Book Folding Machine, 3 42in. Self Clamp Guillotines by Furnival & Co., 1 38in. and 2 32in. similar Machines, 32in. Guillotine by Furnival & Co., Hand Clamp, 4 26in. similar Machines, 2-Pillar Gold Blocking Press, Heating Surface 18in. by 22in., No. 33 Brehmer Book Thread Sewing Machine, Nearly New 30in. Perforating Machine, Nos. 4, 23, and 24 Brehmer Reel Wire Stitching Machines for Power, No. 4 Perfection Reel Wire Stitching Machine, 6 Wheel Treadle Paging Machines, 4 Wheel Hand Lever Paging Machines, New Repeater Self Feed Eyeletting Machine, New 10in. Wizard Hand Lever Perforator, 3 New Nipping Presses, Platen 20in. by 40in., 16 New ditto, Platens 15in. by 12in., 2 Relief Stamping Presses, Lever Die Press, 2 Copying Presses, Bundling Press, Iron Standing Press, Hand Lever Label Punching Machine, Platen 25in. by 15in., 1,500 Label Cutters, Treadle Eyeletting Machine, for Bench, Universal Round Corner Cutting Machine, No. 2360 Fitted Treadle, Hand Lever ditto, Sewing Frames, Laying Presses etc.

Lithographic Plant: Halligan's Lithographic Printing Machine, Demy Litho Transfer Press, 2 Demy Hand Litho Transfer Presses, 1,750 Litho Stones, 44in. by 33in. to 22in. by 17in, etc.

Box-Making Plant: 40in. Gum and Varnishing Machine, 42in. Rotary Cutting and Scoring Machine, 46in. Rotary Millboard Cutting Machine for Power, 38in. and 36in. Scoring Machines, 6in. Double Headed Round Corner Cutting Machine, 32in. Lever Millboard Cutter, 7in. Treadle Cutter Iron Stand, Corner wire Stitching Machine, Large Quantity of Steel Cutting Rule.

Miscellaneous: 7 5-h.p. Electric Motors, 500 volts, Platform Weighing Machine, Mahogany Desk, Glazed Showcases, etc.

On View Day Prior and Morning of Sale, and Catalogues of the Auctioneer.

150, FLEET STREET, LONDON, E.C.4.

Telephone: Central 6678.
Telegrams: "Printauct." Fleet, London.

THURSDAY, SEPTEMBER 3, 1925.

Toward Trade Revival.

THE holiday season has brought the usual period of slackness throughout the printing and allied trades, accompanied by the hindrances to business that are occasioned by the absence of principals and executives on vacation. In a few weeks, however, the holidays will be but memories of the past, and everyone will have settled down again to face the business opportunities of the autumn and winter months. Happily there are already signs of some improvement of trade, and direct advertising in particular is a field which is rapidly growing in importance and which holds out prospects of substantial returns to those printers who have the enterprise and ability to exploit it. In this connection it is fortunate that the collective advertising scheme of the Federation of Master Printers is now well under way and will shortly enter upon its second phase in helping the printer to "Sell More Print." This and every other aid should be utilised to the full, in order that the printing trade may experience the much-needed revival which now seems within the range of possibility.

* * *

Price of Strawboards.

DUTCH strawboards have eased considerably in price during the last month or so and agents' quotations are 10s. per ton less than the June lists. Stocks in hand are naturally accumulating, but business is far from brisk. Mill quotations have reached about the lowest point since the days before the war. A British firm selling direct from Dutch mills is offering to supply best-grade boards at tempting prices.

* * *

Other Boards.

WHITE wood pulp boards remain steady in price and are listed from agents' stock at £16 10s. per ton for 40s to 240s, £17 10s. for 400s, and £18 10s. for 500s and 550s. Glazed leather boards of Norwegian makes are quoted £16 and £16 10s. per ton.

* * *

British Paper in Australia.

NEWS that the Australian Trade Treaty with Canada has been ratified in the Commonwealth is still lacking. So much time has elapsed since Canada gave its decision that the question is being asked as to whether some eleventh hour hitch has arisen. To judge by expressions of opinion in Australia on the subject of the reciprocal treaty, this would not be surprising. The president of the Sydney Chamber of Commerce (Mr. J. M. Dunlop) evidently summarised the feeling of traders when he stated that he thought the proposed Canadian treaty was rather one-sided in favour of Canada. A particular statement regarding the news-print preference to the Dominion suggests a very friendly feeling towards papermakers in this country. Thus, it is stated, in the event of the preference becoming a fact, British manufacturers will almost certainly have to face a keen competition for the Australian market. That competition would be faced with better heart were it not for the fact that a large number of the Canadian mills are financed by United States capital. British manufacturers, it is pointed out, have spent large sums on their mills in the expectation of holding and increasing their exports to Australia. It is contended that nothing should be done to increase the difficulties which British industries are facing, or to aggravate the British unemployment problem. No one, of course, appreciates the force of these arguments more than the papermaker in this country, and he has served his customers in the Commonwealth so fairly and so well that a retention of a great deal of the custom hitherto enjoyed ought to be assured, whatever may occur to the Trade Treaty. That custom represents 68 per cent. of the total paper supplies to the Commonwealth, which is a higher figure than in the case of textiles or machinery.

* * *

"Art" Paper.

IN respect of coated papers, our view is that there is a marked sign of changing taste in what we call art papers. It is not a far call to the days when coated art paper was just introduced to meet the demand for a surface capable of receiving the inked impression from the new type of meshed or screened printing plate known as a half-tone block. The half-tone process was beginning to be accepted as a commercial proposition barely twenty-five years ago, and even in the leading printing trade magazine of twenty years ago practically all the illustrations in the advertisements were from woodcuts, which at that time cost 4s. per square inch, against 1s. per square inch for half-tone plates. The latter were pronounced perfect; but to modern eyes they are terribly crude. Experts claimed that smooth finished paper, free from chalk would yield the best results; but chalk or enamel art paper was gaining ground. In after years and up to the outbreak of war, the commercial taste ran in the direction of extremely glossy art paper, while in artistic and æsthetic quarters the elimination of coated paper was demanded. Matt art paper came along (from America) as a concession to the desire for elimination of gloss; but by running to the other extreme the printer was presented with a set of difficulties and an increase in the price of paper and cost of production, in consequence of which matt art paper made little headway in this country.

Printers' Miniature Bisley.

A Successful Rifle Shooting Meeting.

Held last i Saturday at the Ham and Petersham R fle Range, the Printers' Miniature Bisley took place in excellent weather, and the meeting proved the most successful yet arranged by the Rifle Section of the Printing and Allied Trades Charity Sports Association. There were over 500 entries for the different events, despite the fact that the number of competitors, some 70 odd, was somewhat below the usual figure. Some excellent shooting was witnessed, and as a result of the meeting printers' charities will reap considerable benefit.

Mr. C. W. Kimpton (W. H. Smith and Son), who is this year's president of the Rifle Section, distributed the prizes at the end of the meeting, and in the course of his speech he referred to the recent winning of the King's Prize at Bisley by Mr. Archie Smith (W. H. Smith and Son). By way of encouragement to competitors to continue their rifle practice, he mentioned the fact that Mr. Smith had achieved his success after only about four years' shooting.

Some of the Results.

The Championship of the Printing Trade, awarded by the *Sporting Life and Sportsman*, was won by G. T. Foxon (Bradbank), who secured the gold medal, after shooting off a tie with N. C. Headland (London Label Co.), who took the silver medal. Their initial score was 299 points each. The third prize, a bronze medal, went to J. Gudgin (John Dickinson).

The "John Fry" Challenge Cup, in the Grand Aggregate competition, was won by G. S. Booth (Carmelite House), with 791 points; E. Grimwade (Bradbank) was second, with 790 points; and S. G. Phillips (P.O. Savings Bank) third, with 784 points. The first prize consists of the Cup, 30s. and a coupon, and the N.R A Badge, the last-named being presented by the *Graphic*.

The *Field* Challenge Shield for teams of four was won by the John Dickinson A team with the record score of 398 out of a possible 400.

The "Walter Haddon" Challenge Cup for teams of eight was won by the John Dickinson Rifle Club, who scored a record of 784 out of a possible 800.

The Rifle Section's popular secretary, who, of course had a very busy day on this occasion, is Mr. A. J. C. Pescud (*Field* Press, Ltd.).

Givers of Prizes.

Those giving prizes for competition at this meeting were the following:—*Field* Press, Ltd., Lanston Monotype Corporation, Major Astor, Proprietors of the *Daily Express*, Thos. de la Rue and Co., Ltd., Proprietors of the *Daily Telegraph*, Viscount Hambleden, Major Sir W. H. D. Acland, Bart., Proprietors of *Pearson's Weekly*, Proprietors of the *Graphic* and the *Daily Graphic*, Messrs. T. G. and J. Jubb, Proprietors of the *Bystander*, Messrs. Lorilleux and Bolton, Ltd., Messrs. Burge, Warren and Ridgley, Mr. Horton Harrild, The Society of Miniature Rifle Clubs, Mr. Iver Fraser, Messrs. George Mann and Co., Messrs. B. Winstone and Sons and the *Sporting Life and Sportsman*.

BOOKS FOR THE BLIND.—There has just been issued the annual report for 1924–5 of the National Institute for the Blind (whose headquarters are at 224 6 8, Great Portland-street, London, W.1). Amongst the very numerous activities of this most necessary and deserving institution is the production of embossed literature, and its dissemination amongst the blind—one of the most important branches of Institute's work. It is satisfactory to note that during the period under review not only has the production of embossed literature been very much augmented, but that it has been found possible in most cases to reduce the selling price of Braille books and periodicals. The Institute is the largest publishing house for the blind in the world, and at the present moment is practically working to full capacity in the production of Braille books, periodicals and music. Some indication of the scope of their work is given in the fact that 7,028 bound volumes in Braille were issued last year and 245,849 magazines and newspapers, whilst the output included other Braille literature and large quantities of music and also of Moon publications. The Institute relies upon voluntary contributions to enable it to supply these products to the blind at a fraction of the cost price.

Personal.

MR. HENRY CASAUBON DERWENT, general manager and secretary of the Bradford and District Newspaper Co, Ltd., appropriately celebrates the completion of a quarter of a century's service just as his firm makes the big expansion to which reference is made in another column of this issue.

THE present directors of this important north-country newspaper concern are Sir James Hill, Bart., Sir Arthur Marshall, K.B.E., Mr. Arthur James Hill, J.P., and Mr. Albert Hill.

THE company's works manager and chief engineer, Mr. H. Gilbert Derwent, served his apprenticeship in the machine-room of the *Bradford Daily Telegraph*, and with Messrs. R. Hoe and Co., Ltd., in London. He then had a long experience of newspaper plant with Messrs. Joseph Foster and Sons, Ltd., the Preston printing engineers, after which a period of South American experience and of war service preceded his appointment to his present position.

MR. EDMUND ARNOLD, son of Mr. E. George Arnold, the well-known Leeds master printer, who is principal of the firm of Messrs. E. G. Arnold and Son, and ex-president of the Federation of Master Printers, was married at Oslo (Christiania) last week to Miss Marie Bredal, daughter of Herr Bredal, of Oslo.

MR. H. D. THOMPSON, the head of Messrs. Bagot and Thompson, printers, London, has been presented by the staff with a smoking cabinet and an illuminated address on completing 50 years' association with the firm.

MR. D. G PETERS, after twenty-seven years' service as overseer in the machine-room of the *Yorkshire Observer*, has retired, and to mark the occasion his colleagues have presented him with an oak-mounted clock.

THE presentation was made by Mr. E. C. Derwent, general manager of the Bradford and District Newspaper Co., Ltd.

MR. J. A. MOIR, of the composing-room staff of the *Aberdeen Evening Express*, has been presented by the case-room staff with silver gifts on the occasion of his marriage.

MR. JOSEPH JONES has been elected president of the South Wales group of the Typographical Association.

MR. JAMES DOUGLAS, editor of the *Sunday Express*, who recently underwent an operation for appendicitis, has been moved from the nursing home in London to a convalescent home at Margate.

MR. F. J. MORTIMER, who for many years was the editor of the *Amateur Photographer* before it became associated with *Photography and Focus*, has been appointed editor-in-chief of the amalgamated journals. He succeeds Mr. R. Child Bayley, who occupied the position for over 25 years.

MR. BAYLEY has accepted a directorship connected with agricultural journals, but will retain a certain interest in the *Amateur Photographer* as consulting editor.

ENGINEER LIEUT.-COMMANDER J. BURNARD BULLOCK, R.N (S.R.), has succeeded Mr. Owen Letcher in the editorship of the *South African Mining and Engineering Journal*, which was founded by the late Major Clem D. Webb, M.C., and remains in the sole possession and control of Mrs. Webb, the widow.

MR. PHILIP MILLWOOD, formerly secretary and publicity organiser of the *Daily Herald*, has been appointed general secretary of the Civil Service Confederation.

MR. C. R. SEDDON, president of the Papermakers' Association, entered a nursing home at Leeds, and an operation has been performed for internal trouble. The operation, we are glad to learn, was successful, and the patient is progressing as favourably as can be expected.

SIR ALBERT SPICER has made good progress after his accident, and was able to return to London on Monday.

CAPT. W. R. MACILWAINE and Mr. A. W. Grodsky have been appointed directors of Arthur T. Dimmock, Ltd., Imperial House, Kingsway, London.

MR. JOHN TOD and his family have gone to Italy for a few weeks. Mr. Tod had the misfortune recently to fracture a muscle in his foot during a game of tennis.

THE wedding of Mr. H. Cecil Wild, a director of Messrs. W. G. Taylor and Co., Ltd., to Miss Muriel C. Moody took place Wednesday at East Molesley.

A RECEPTION followed in an historic mansion adjoining Hampton Court Palace, a magnificent ball-room being used for the purpose.

Visit to Croxley Paper Mills.

At the invitation of Messrs. John Dickinson and Co., Ltd., sixty members of the Publicity Club of London visited Croxley Paper Mills on Thursday afternoon, August 20th. The visit was organised by Mr. W. H. H. Radford, the energetic chairman of the Development Committee.

Upon arrival, after a pleasant journey by road, the party was received (in the unavoidable absence of Mr. D. M. Skeins, the manager) by Messrs. H. Kingham and F. Heckford, and conducted on a most interesting and instructive tour of the mills. Many of the scientific wonders of modern papermaking were demonstrated and explained, and it was quite evident that the standard of efficiency in this industry left little to be desired. The visitors were afterwards entertained to tea and each presented with a suitable souvenir.

After a brief word of thanks by Mr. Andrew Milne, chairman of the Publicity Club of London, to Messrs. John Dickinson for their hospitality, the party returned to London by motor, highly delighted with their experience.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

BRITISH ART CO., LTD. (art publishers, etc., London).—Charge on leasehold premises Nos. 78 and 78A, Margaret-street, Marylebone, dated August 6th, 1925, to secure £3,000. Holder: Mrs. Ethel J. Haward, 138, Lauderdale Mansions, Maida Vale, W.

DERBY MERCURY AND EXPRESS, LTD.—Satisfaction in full on August 17th, 1925 (a) of mortgage and debenture (collateral) dated January 15th, 1925, securing £2,000; (b) of debenture dated November 25th, 1910, securing £1,000; (c) of debenture dated March 5th, 1909, securing £2,000; and (d) of debenture dated December 11th, 1908, securing £1,000.

ALLIED NORTHERN NEWSPAPERS, LTD.—Trust deed dated August 17th, 1925, to secure £2,300,000 6½ per cent. debenture stock, repayable at 102 per cent., with power to issue £700,000 further like stock on conditions contained in the trust deed. Deed constitutes specific charge on (1) £500,000 7 per cent. cumulative preference and £400,000 ordinary shares of Associated Scottish Newspapers, Ltd., of Glasgow, (2) £60,000 ordinary shares of J. M. Smith, Ltd., of Glasgow, (3) £85,000 ordinary shares of "Newcastle Chronicle," Ltd., and (4) £800,000 6½ per cent. redeemable second debentures of "Newcastle Chronicle," Ltd., and a floating charge on the company's undertaking and property, present and future, including uncalled capital. Trustees for the debenture stockholders: Law Debenture Corporation, Ltd., 24, Old Broad-street, E.C.

RECEIVER APPOINTED OR RELEASED

CORNUBIAN PRESS, LTD. (Redruth).—P. R. Bawden, of Redruth, Cornwall, was appointed receiver on August 17th, 1925, under powers contained in debenture dated June 20th, 1902.

C. AND T. MILLER, LTD. (plain and fancy box manufacturers, etc., Manchester).—A. Yearsley, of 27, Brazennose-street, Manchester, ceased to act as receiver on August 15th, 1925.

ADLOWS, LTD. (publishers, etc., London).—Miss V. V. Noble, of 154, King's Cross-road, W.C.1, ceased to act as receiver or manager on August 15th, 1925.

S. AND P. MUSIC ROLL CO., LTD. (London).—E. Portlock, of 186, Bishopsgate, E.C.2, ceased to act as receiver or manager on August 13th, 1925.

BANKRUPTCIES.

Re GERARD JOHN MATHIESON, late of 32, Chapel-street, Mayfair, and Clarendon-road, Cliftonville, Margate. The first meeting of creditors herein was held at the London Bankruptcy Court on August 26th, a receiving order having been made on August 5th. Mr. E. Parke, official receiver, reported that the debtor had stated in preliminary examination, that he had always been in the printing and stationery trade, mostly on his own account, and was at present technical adviser to a company in the trade at a salary of £500 per annum, but he had not received any sum in respect of this, the company claiming that he owed it £3,000 in respect of excess profits duty which the company had to meet. The debtor roughly estimated his liabilities at £19,000 and valued his assets at £2,000. He attributed his failure to loss arising owing to foreclosure proceedings directly attributable to the War, and costs of unsuccessful actions. A resolution was passed for the appointment of Sir H. J. de Courcy Moore, chartered accountant, as trustee of the estate, his bond being fixed at £500. A committee of inspection was nominated consisting of Mr. A. L. Poulter, Mr. T. J. R. Stevens and Mr. W. E. Halter.

Re GEORGE A. ARNOTT CLOWES, Queenhithe, E.C., and Pear Tree Cottage, Claygate, paper merchants' traveller.—Under a receiving order made against this debtor on August 5th, the first meeting of creditors was held on August 24th at the London Bankruptcy Court. The debtor had lodged a statement of affairs showing ranking liabilities £3,004 and net assets £557. He had stated in preliminary examination that in 1906 he obtained employment and was appointed a director of a company in the paper trade and had been employed by them ever since as traveller and a director of the company, latterly at a salary of £350 per annum, plus 25 per cent. commission. He attributed his failure to loss of trade, and consequent loss of commission. A resolution was passed for the appointment of Mr. F. F. Sharles, I.A., 52, Queen Victoria-street, E.C., as trustee of the estate, his bond being fixed at £600.

From the London Gazette.

PARTNERSHIP DISSOLVED.

A. Hulme and G. A. Boycott, ticket and general printers, 56, Thomas street, Manchester, under the style of E. Tapp and Co.

The Amalgamated Press.

Annual Meeting.

The ordinary general meeting of the Amalgamated Press (1922), Ltd., was held on Thursday, August 27th, at the Memorial Hall, Farringdon-street, London, E.C.

Sir George A. Sutton, Bt. (chairman of the company), presided.

The chairman said: Gentlemen,—Although we are met here to-day at a time of acutest industrial depression, the report which I have the pleasure to present to you shows so little reflection of the prevailing troubles that you will, I am sure, consider it highly satisfactory.

The profits, as you will have seen from the balance-sheet which has been placed before you, amount to £541,199 5s.

The continuous growth of advertisement revenue is the best evidence you could wish of the ever-growing popularity of your magazines and periodicals among advertisers and advertising agents. So great, indeed, has been the demand for space in three of them, *Answers*, *Home Chat* and *Woman's Weekly*, that we have had to make certain increases in the advertisement rates.

As I pointed out last year, this company does not derive its entire profits from the sale of periodicals and magazines. The Imperial Paper Mills, in which we hold the controlling interest, is now the second largest paper mill in the country, and, in addition, owns a controlling interest in timber limits in Canada. Further, your share interest in the largest printing ink works in the country, and your vast printing and publishing factories, place us in the fortunate position of being a great self-tained organisation.

I now have to move: "That the report of the directors produced, together with the annexed statement of the company's accounts at June 30th, 1925, be received, approved, and adopted, and that a final dividend for the year of 2s. a share, less income tax at 4s. 3d. in the £, be now declared on the ordinary shares."

The resolution was unanimously agreed to.

Ulverston Paper Mill Co.

Scheme of Arrangement Sanctioned.

Mr. H. Winstanley, sitting as the deputy of the Chancellor in the Palatine Chancery Court in Manchester, was asked to give his sanction to a scheme of arrangement between the Ulverston Paper Mill Co., Ltd., and its creditors and shareholders.

Mr. H. S. Barker, who appeared for the company, explained that it was incorporated in 1906, and took over as a going concern the business of paper manufacturers carried on at the Furness Paper Mills, Ulverston, under the style of Samuel Pollitt and Sons, Ltd. The capital was £20,000, in £1 shares, of which 7,406 were issued.

Mr. J. H. Hartley, of Blackburn, held mortgage debentures aggregating £2,000 and the bank held the other debentures to the amount of £18,000. Owing to the depression in the paper trade the company was involved in financial difficulties, but it was anticipated that the scheme now proposed would enable it to pay its creditors in full and tide over the depression. It was proposed to convert 7,300 of the unissued shares into cumulative preference shares, of which 3,300 would be subscribed and paid for in cash by three of the directors and three shareholders. Other shares would be taken by certain creditors in payment. It was proposed to pay in full unsecured creditors for £25 or less, and loan holders and other unsecured creditors would receive an immediate payment of half-a-crown in the pound, and the balance in three instalments.

The application was not opposed, and the Deputy of the Chancellor sanctioned the scheme.

THE arrangements for the sale of British Empire Exhibition stamps will be the same as last year. The cost of production of special stamps is approximately twelve times that of an ordinary stamp, and the expense of a general distribution is, therefore, prohibitive.

Culter Mills Strike.

A Settlement.

A settlement has been reached in the strike at the Culter Paper Mills, and work was recommenced there on Aug. 25th. The trouble began on July 31st, when some 500 or 600 employees ceased work as a protest against five non-union men being employed. Efforts had been made by the National Union of Printing and Paper Workers to bring all the employees within the organisation. For some time these five men held out against the demonstration, while the employers adopted an attitude of entire neutrality.

While this attitude received due acknowledgment from the Scottish secretary of the Union, the withdrawal of the workers was insisted upon and this led to the closing of the mill for four weeks, although there were orders to be executed.

Later however, the five men, we understand, consented to join the Amalgamated Society of Papermakers, but the officials of the National Union were not satisfied with this and the trouble persisted until Aug. 24, when a settlement was reached.

Mr. W. Dyson visited Culter on behalf of the Employers' Federation of Papermakers, and Mr. W. Ross went down for the National Union of Printing and Paper workers.

Neither employers' nor workers' representatives would state what the terms of settlement were. It was realised at the end of the week, says the *Scotsman*, that the position was an extraordinary one, and that what was described as "industrial tyranny" could not long continue. The employees generally express satisfaction that the strike of almost a month is over.

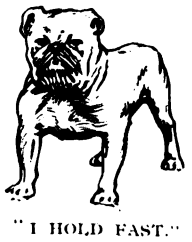
GOODS which may be imported into Czecho-Slovakia without licence and without declaration include the following:—*Paper and Paper Wares:* Coloured paper, also lacquered and white-coated paper, wall-paper, moulded wares of carton pierre, asphalt, and similar materials.

NO BOARDS FOR BALES

of ART, ENAMEL, GUMMED or PLAIN PAPER

Typical Bale weighing cwts. 2 qrs. 3 lbs. 4

By a simple and economical patent system we have eliminated all the worries of paper baling.



No creasing or string marking. Hermetically sealed, the bale is dust, damp and pilfer-proof.

In daily use for bales up to 2½ cwt. and 50" long without baling boards.

The saving effected in packing charges is almost incredible.

Method of Baling.

PATENT App. No. 30327-24.

THE MANUFACTURE OF PULP AND PAPER, Vol. V. London: McGraw-Hill Publishing Co., Ltd. Price 25s.

With the publication of the fifth and last volume of this work the gigantic task undertaken by a joint committee of the pulp and paper associations of Canada and the United States is completed, at all events so far as the first edition is concerned. This series of textbooks of modern pulp and paper mill practice are unique from many points of view, and they represent a very valuable service to the industry. The whole work is designed to bring together the fundamental subjects of mathematics and elementary science and the principles and practice of pulp and paper manufacture. The scope of the scheme enables the man with but little education to study in the most efficient manner the preliminary subjects that are necessary to a thorough understanding of the principles involved in the manufacturing processes and operations The preliminary subjects are all included in Vols. I and II. Vol. III is unique in that it is the first book in the English language to deal with the preparation of pulp. Vol. IV and V take up the manufacture of paper. All the subjects are treated in detail. Over 100 experts have been associated in the preparation of the text and great care has been taken to bring it accurately up to date.

The final volume now published is divided into six sections. In the first section the cylinder machine is described, as well as machines of special design and also various attachments used for the production of special papers. The different methods of driving the paper machine are covered in full detail.

Section 2 is divided into two parts. The first is an extremely well-written treatise on hand-made paper by Mr. Dard Hunter, and the second covers tub sizing.

Section 3 deals exhaustively with the finishing operations of papermaking, the operations covered including cutting and rewinding, supercalandering, plating, pasting, sorting, counting, packing and loading paper.

Section 4 on coated papers embraces the layout of the coating plant, the testing and preparation of the coating materials, a description of the different coating processes, as well as the drying and finishing operations.

A valuable part of the fifth section, which deals with paper testing, is a description of the microscope and methods of microscopical analysis of paper, and it includes also nine plates showing the standard fibres in their natural colours, which were prepared for the Bureau of Standards.

The sixth and final section treats of pumps, electrical equipment, heating and ventilation, and lubrication and water.

Thus concludes a task which has occupied five years, and Mr. J. N. Stephenson, the editor, and all who are responsible for the work have placed the whole industry under an obligation. The volumes are nicely got up and neatly printed, and there are numerous illustrations which help to an understanding of the text.

Foreign Paper Trade Directories.

Two Useful Books of Reference.

There recently came to hand two directories, one dealing with the paper trade of Germany and the other with Central Europe. The Paper Trades Directory of Germany (Papier Adressbuch von Deutschland) is published by the *Papier Zeitung* (Carl Hofmann, G.m.b.h., Dessauer Strasse 2, Berlin), the price, bound in linen, being 35 marks. The issue of this edition has been delayed for four years owing to various difficulties which can be understood. These same circumstances have also naturally given rise to a very large number of alterations in the addresses of firms, many of which have been dissolved or reconstructed, while new undertakings altogether have been formed. Its value, therefore, as an up-to-date reference can be appreciated. In future it is hoped that the work will appear regularly every two years. Running to 1164 pages the book is divided into four parts. In the first the paper, board and pulp manufacturers, rag sorting establishments and rag and waste paper dealers, are alphabetically arranged. Part 2 deals with firms engaged in making goods from paper and also printers, the arrangement here again being alphabetical. A useful classification is resorted to in Part 3, firms being arranged alphabetically under the following headings (a) factories making stationery and office requisites; (b) wholesalers and agents; (c) picture post card and art publishers, also wholesalers of post cards and pictures; and (d) stamp wholesalers and retailers alphabetically arranged. There is also in a subsequent part a useful arrangement of the firms in the paper trades according to towns and provinces, to which are added firms who are not members of the official association. Finally there is a list of mills according to their productions, and there is also included in the volume a list of associations in the paper trades. Thus the directory is a very complete index to the German paper industry and reference is facilitated by the insertion of cardboard dividers between the several parts.

We have also received the 21st edition of the Paper Trade Directory of Central Europe, published by Guntter-Staibs Verlagsgesellsnaft m.b.H., Biberach-Riss, Wurttemburg. The price of this work is marks 10.50. The directory, of 650 pages, is of a handy size, 5½ by 7½ inches, the contents being arranged in six parts. The first gives an alphabetical place register for Germany, Denmark, Alsace Lorraine, Holland, Austria, Poland, Switzerland and Czecho-Slovakia, this being followed by an alphabetical register of firms in the states mentioned. Part 3 gives very complete details concerning 1,708 paper, board, pulp, coloured paper and parchmentising firms, each record containing full details concerning the company, its branches, capacity and productions. There is also an arrangement according to states. Part 4 is an index to the sorts of paper and the suppliers in Germany, Austria and Czecho-Slovakia. Then there is also printed the trade customs of the organisations of manufacturers and users. All this information, covering such a wide area in so complete a manner, renders the directory of special value.

Bury's Industries.

Papermaking Machinery, etc.

In dealing with the industries of Bury, Lancs, a writer in the *Manchester Guardian Commercial* says that one of the largest individual undertakings in Bury is the firm of Messrs. Charles Walmsley and Co., Ltd., which, although a world-famed firm of papermaking machinery makers, started operations in 1866 as makers of mill engines and pumps of different types. In 1898 they constructed their first paper machine for the Sun Paper Co. at Pendleton, and from that date until 1910 turned out one machine per year. Since that date, however, sixty machines have been made, in addition to renewals and auxiliary machinery.

The firm, who are associated with the Armstrong-Whitworth group of undertakings, and who have recently established a Canadian branch to cater for the Canadian market, make not only the machinery used directly in the manufacture of paper, but also equip complete mills and provide plant for the entire process of papermaking.

Another firm of papermakers' engineers whose headquarters are in Bury are Messrs. Bentley and Jackson, Ltd., whose papermaking machines are running day in and day out in various parts of the world in the manufacture of different grades of paper, ranging from news-print to fine writings and tissues.

In the vicinity of Bury, at Radcliffe, there are the large papermaking firms of the East Lancashire Paper Mill Co., Ltd, and John Wild and Son, Ltd. In Bury itself the largest papermaking mills are the Elton Paper Mills of James Crompton and Brothers, Ltd. This firm was founded in 1856, and has progressively developed its production of white and coloured tissue papers, crinkled and typewriting papers.

THE Hungarian paper industry, like all other branches, has been suffering from lack of orders during past weeks. All the mills are burdened by crushing expenses and high prices of raw materials, especially wood.

Noteworthy Paper Exhibition.

Interesting Features of the New Museum at Munich.

The German Museum of Natural Science and Technology is the subject of an extensive notice in the *Papier Zeitung* and the main features of the section dealing with the paper industries cannot fail to interest generally.

Those who were fortunate enough to visit the International Exhibition of Graphic Arts in Leipzig just before war broke out in 1914 will remember the exceedingly interesting exhibit, due to the enthusiasm of Herr Zander of Berg Gladbach, of the complete Haynsburg hand-made paper mill. This mill was founded in the year 1700 and was ascribed to the Duchess Amalie of Zeitz-Weissenfels, daughter of the Great Elector, and was still producing paper in 1909. It contains three sets of stamps, made of wood shod with iron and working in stone troughs, the stamps being actuated by wooden pegs or cams on the wooden shaft which is turned by the water wheel. It is rare to find such an ancient plant still so complete and with the old wooden machinery in working order.

It was a wise thought which prompted the German Papermakers' Association to purchase this old mill, and still wiser to have it re-erected complete in the Museum at Munich.

It will be remembered that a replica of Louis Robert's original machine was amongst the side shows of Zander's exhibit at Leipzig in 1914. This was purchased by Sections 2 and 3 of the Papermakers' Co-operative Association and likewise presented to the Museum.

These things are shown in rooms No. 313, 314, 315 and comprise also exhibits showing the history of writing materials such as papyrus, palm leaves, birch bark, etc., from 1350. In addition the German machine builders have contributed machines and models of all kinds, bringing the exhibition of papermaking machinery right up to date.

In room No. 316 the development of the art of writing may be followed step by step from the primitive picture writing of prehistoric times, in stone and bone, through hieroglyphics, Phœnician, Greek and Latin, also through the oriental developments in Babylon, India, China and Japan.

The reproduction of a monk of the Middle Ages at work in his cell engaged upon his careful writing is startlingly realistic, with his implements lying around ready to hand.

In a neighbouring room the various methods for reproducing written and typed matter may be studied in close proximity to the various actual printing processes, beginning with Gutenberg and including the last word in offset printing, type-setting and casting machines.

These exhibits now occupy fourteen rooms and will be continually kept up to date.

Damage estimated at well over £5,000 was done by a fire that broke out in a large esparto grass shed at the Inverurie Paper Mills, belonging to Messrs. T. Tait and Sons, Ltd., on Monday afternoon.

A FULL illustrated report dealing with Poppy Day (November 11th), 1924, has been issued in brochure form and is both exhaustive and interesting. Committees for next Poppy Day are about to be formed throughout the country, and it may be useful to state that the headquarters of Poppy Day 1925 are at 145, Piccadily, London, W.1.

MR. H. HOLMES, late managing director of Charles Morgan and Co, Ltd, 182-184, High Holborn, has acquired an interest in the Vulcanoid Co., 87, Clerkenwell road, E.C., manufacturers of fancy penholders, medical containers, wireless accessories and similar goods in erinoid, lactoid, etc., and, with the former proprietor, Mr. F. Donaldson Gibbs, has formed a private limited company under the style of "Vulcanoid Co. (1925), Ltd."

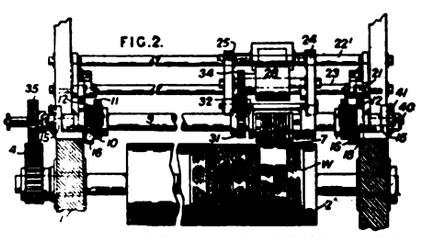
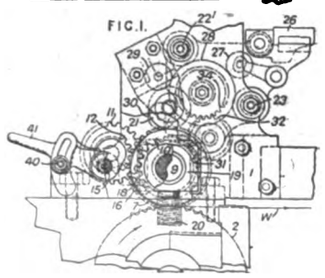
New Inventions

Sheet Feeding Apparatus.



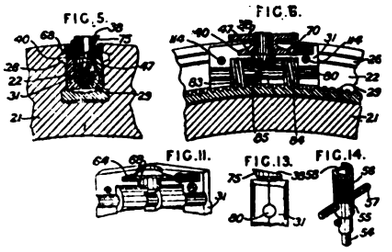
As patented by Mr. T. H. Backhouse, in sheet-feeding apparatus for printing-machines, etc., of the kind in which the sheets are carried on endless or like bands 17 and are pressed into contact therewith by pressure members as gravity-controlled rollers 10, the pressure members are arranged to be spring-controlled so as to damp out free vibration of the pressure



members to allow the apparatus to work at high speeds. The roller 10 is freely mounted in an arm 12 pivoted on a U-shaped rod 13 carried by an adjustable sleeve 14 on a spindle 15. The arm 12 is controlled by a spring 18 so arranged that its pull is substantially constant, and is small compared with the action of gravity on the roller 10.

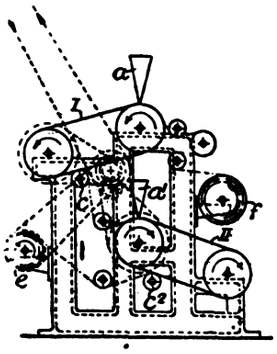
A Late News Device.

Messrs. R. Hoe & Co., Ltd., have patented a late news printing device, which is provided with mechanism for effecting intermittent contact between the late news printing cylinder and the impression cylinder, such mechanism also permitting the printing cylinder to be permanently thrown out of contact with the impression cylinder. Intermittent alternate contact of the printing cylinder with the impression cylinder and inking mechanism is also effected. The shaft 9 of the printing cylinder 7 is driven by gears 4, 35 from the impression cylinder 2 and has, at each end, a fast gear 10 which drives, through intermediate gears 11, 12, a gear 16 loose upon the shaft 9. Cams 18, fixed to the gears 16, engage rollers 21 mounted in the side frames 1 of the machine and periodically move the cylinder 7 into contact with the web W passing round the



cylinder 2 against the action of springs 20 pressing upon the bearings 19 of the shaft 9. The gears 11, 12a at each side, are mounted on an eccentric portion of a stud 15 journaled in the frame 1 and having a slotted arm 41 engaged by a clamping nut 40 whereby the gears 11, 12 may be held disengaged from the gears 10, 16 to stop the rotation of the cams 18 so that the cylinder 7 remains out of contact with the web. The ink fountain 26 and inking rollers 27 . . 30 are mounted in brackets 24, 25, and the inking rollers are driven by gears 32, 34 from a gear 31 on the shaft 9. To permit the late news to be printed on any part of the width of the web, the cylinder 7 and gear 31 are slidable on the shaft 9 and the brackets 24, 25 are slidable on their supporting rods 22¹, 23. The gear 35 may be slidden out of mesh with the gear 4 to put the late news printing device entirely out of action.

Clamping Printing Plates.



Mr. L. W. Claybourne has patented a device for clamping printing plates on a flat or cylindrical bed 21 comprising a block 31 adjustable on the bed and carrying a member 38 consisting of a plate-engaging jaw 75 and wings 40 adapted to engage recesses 26 in grooves 22 to hold the block on the bed. The block is formed in two pieces, Fig. 11, secured together by screws 114. In the upper portion of the block is a cavity 64 in which the member 38 is supported, slots 68 being provided in the block through which the wings 40 project to engage the recesses 26. The member 38 is held in any

desired position by a spring-pressed ball 70. Adjustment of the block 31 is effected by the rotation of a gear 47 journaled in the member 38 and meshing with a gear 85 on a horizontal spindle 80 carrying worms 83, 84 engaging a rack 29 in the bottom of the groove 22. When the bed is a cylinder with helical grooves, the bottom, side and top faces of the block 31 are shaped to fit the cylinder and groove surfaces. A spanner 55, Fig. 14, is provided with a slotted end 58 for engaging the jaw 75, and with a squared end 54 which fits a socket in the gear 47. It is knurled at 56 for turning quickly by means of the fingers, and has a handle 57 by means of which a greater force may be applied.

Coating Paper.

Paper for wrapping-up chocolate, etc., is coated on both sides with a layer of collodion, celluloid or the like in which metal powder is embedded. The paper as it travels from a roll f to a roll e is guided over supporting bands or rollers I., II., coating

material being delivered to one side of the paper from a hopper a and to the other side from a hopper a¹. The rollers supporting the bands I., II. may be heated to accelerate the hardening of the coating. Rollers c, c², co-operate with the bands I., II., as glazing rollers. The device is suggested by Mr. J. Marschall.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

COPIES of an export supplement to the *Leipziger Neueste Nachrichten* which are issued in connection with the Leipzig Fair are interesting from the fact that they are printed by the rotary photogravure process. The first photogravure printed journal we saw was also a German publication, called *Der Welt Spiegel*, issued about the end of 1913. Of the two, the earlier example is by far the better and the paper used is a very potent factor in deciding the issue. The 1913 journal is on toned, well rolled paper such as is used for some of the high class supplements that are occasionally issued with English magazines to day. As against this the recent German export issue referred to is printed on a good class, clean coloured news-print. The pictures are infinitely better than anything we see in the modern newspaper from half-tones, but they do not compare with the photogravures in the 1913 effort. Some day our newspapers will very probably be printed by the photogravure or some closely similar process. Then we may get a picture page that will be worth looking closely at and newsprint may bring a fraction more per lb.

* * *

THE last twenty years have wrought a noticeable change in office systems, which in turn has had a pronounced influence on certain types of paper formerly in demand. Twenty years ago there was a steady request for manifold papers for use in duplicate books of all descriptions. The typewriter, filing cabinet and billing or listing machine, has turned the demand in the direction of bond and bank papers, loose forms and padded stationery. There is still a market for manifold papers, and all varieties are used, but not in anything like the quantity that they used to be. Time was when manifold papers of all sorts, oiled, waxed and untreated were an important feature of the manufacturing stationer's stock. Often enough there was trouble with the oiled variety through its tendency to stain the writing paper next to it in the book. And again it was fearsome material to handle for ruling and printing. Waxed grades were and are still infinitely to be preferred. Most duplicate books are sent out with carbon paper in the end, and the class of carbon paper used in the old days was of the moist variety which smeared at the slightest touch. The typewriter brought with it the hard-surfaced carbon paper and very little is now seen of the moist type.

* * *

JUST in the same way, the progress in office filing and recording systems has seriously affected the demand for letter-copying books, oiled paper and drying paper. There is still a substantial market for copying papers, and there are strong arguments to be advanced in favour of letter-copying books which always furnish better evidence than typed duplicates. There are very many shipping houses, solicitors, banks and public companies in which letter copying is carried out by the old methods. The great bulk of duplicating, however, is performed by the typist, and the progressive demand is certainly for bond and bank papers.

* * *

To the modern office filing equipment is also due the comparatively recent trend in the direction of colour distinction in paper. English papermakers have risen to the occasion and several mills are specialising on coloured banks and bonds in a wide range of shades. Others are making the mistake of confining themselves to a very restricted range of colours which gives little scope for departmental colour schemes. There is a definite and ever increasing field for coloured banks and bonds, and the specialist must have his substances ranging from large post 7/9 lbs. to large post 18 lbs. Considering what a useful and necessary size double-crown is in these papers, it is surprising how few firms cater for it. The great difficulty in these tinted papers is the very extensive stock which must be carried, and this constitutes a strong argument for specialisation.

New Trade Marks.

SILHOUETTE

458,615. Writing and printing paper, envelopes, writing cards and account books. John Dickinson and Co., Ltd., 65, Old Bailey, London, E.C.4; paper manufacturers.—May 5th, 1925.

The Trade Mark consists of a single Red Line at each Selvedge of the Tracing Cloth.

(A specimen of the Mark may be seen at the Patent Office (Trade Marks Branch), 25, Southampton Buildings, London, W.C.2.)

Proceeded with by Order of the Court on evidence of distinctiveness.

459,644. Tracing cloth. The Winterbottom Book Cloth Co., Ltd., 12, Newton-street, Piccadilly, Manchester, Lancashire; manufacturers.—May 24th, 1924.

SAVOY ORPHEANS.

Registration of this Trade Mark shall give no right to the exclusive use of the word "Savoy."

459,967. Musical publications. Willy Jean Leon Fastinakel de Mornys, trading as W. de Mornys, 78, Queen's-gate, Kensington, London, S.W.7; musical director.—June 22nd, 1925.

GIRDER.

460,294. Paper (except paper hangings), stationery and bookbinding. John Dickinson and Co., Ltd., 65, Old Bailey, E.C.4; paper manufacturers.—July 3rd, 1925.

Carnation

457,321. Typewriter paper, note books, manuscript covers, ink, inked ribbons and carbon papers. The Miller-Bryant-Pierce Co. (a corporation organised under the laws of the State of Illinois, United States of America), 225 to 235, River-street, Aurora, State of Illinois, United States of America; manufacturers.—March 18th, 1925. (To be associated. Sect. 24). Address for service in the United Kingdom is, c/o White, Langner, Stevens and Parry, Jessel chambers, 88, 89 and 90, Chancery-lane, London, W.C.2.

ALL-IN-ONE.

User claimed from July 13th, 1920.

Evidence has been supplied that the Mark is in fact capable of distinguishing the Goods.

B453,464. Account books. Alfred George Blunden, trading as Alfred G. Blunden, 45, Swanscombe-road, Chiswick, London, W.4; a publisher of indexed account books.—November 8th, 1924.

PARAMOUNT.

458,543. Paper mounts or hinges for postage stamps, for use by philatelists. Thomas Cliffe, The Stamp Warehouse, Station-road, Colwyn Bay; foreign stamp dealer.—May 1st, 1925.

MR. WM. C. HAMILTON, papermakers' agent, The Old Mansion House, 73, Cheapside, London, in addition to the mills he already represents has been appointed sole agent for the United Kingdom and export for Messrs. Schuller and Co., Nijmeegsche Papierfabriek, Nijmegen, Holland, makers of glazed transparent greaseproof, white, coloured and embossed.

Review of Paper Samples.

Howard Smith Paper Mills, Ltd., of Canada.

The book is strong, serviceable and lettered back and side, which means an advantage in selecting it from the shelf. There is a classified index and an alphabetical index and all samples are folioed. Mainly it is a book of reference for the user and the distributor, made especially for the selection of appropriate papers. It would gain in value in the hands of the user if a chart were included, specifying the particular adaptability of the various lines. Under English methods a price list would be a very essential feature. The book is strong, compact, a handy size and thoroughly practical.

Coated Papers and Box-Boards for Offset Printing.

This collection, the product of Messrs Gustav Najork, of Leipzig-Plagwitz, is from Loeber, Ltd., of London, and comprises a range of cheap coateds specially manufactured to take colour offset. The samples are elaborately housed in an album very much like the gramophone record albums now in use. Each leaf holds a punched out wallet, through which the printed sample is visible. The colour work is quite good and proves the paper to possess special qualities, although offset printers do not prefer coated paper to work on. For cartons and box linings it may be necessary to use coated products, but the offset printer would avoid them if he could. A defect with these papers is that they polish on the picture with friction and the slightest mark shows. The difficulty of ink squashing, weakness and plucking has been overcome by the makers of these papers and boards by the introduction of a fine grain and a nap surface, along with an intense white colour which helps ink contrast. The sample book is a costly arrangement and the outer make-up is too much on the lines of a pattern case to commend itself to English taste.

Carbonising Papers, Tissues, etc.

This sample book is from Standard Products, Ltd., and contains American and French papers of the class mentioned. It comprises a finely selected range of carbon tissues in white and colours cased in cloth bound covers blocked in white. Unless there is some special reason for it, we cannot understand why printed matter was not indulged in. An index page and another page devoted to the products sampled would have made the book infinitely more interesting, informative and useful. Even a sample book should aim at selling paper.

ATTRACTIVE specimens of high class special papers for catalogues, note headings and announcements, with printed effects, have been received from Messrs. Fredk. Johnson and Co., Ltd., 11b, Upper Thames street, E.C.4.

SPICERS, LTD, issue another useful batch of paper and stationery samples. There are represented paper of every description for every purpose, boards in infinite variety and envelopes and bags covering a wide range.

MESSRS. L. S. DIXON AND CO., LTD., have issued a useful priced stock list and a set of samples. They show a wide range of tinted printings, writings and covers. The "pearl washed" imitation art papers are particularly attractive for their delicate shades and fine finish. The deckled edge antique laids "Edwardian," is another good line.

UNDER the sign of the letter "B" in the centre of the rising sun, representing the symbol of efficiency and service, Messrs. W. V. Bowater and Sons, Ltd., are sending out some fine samples of papers, including pure S.C., M.F., white art, imitation art, cream laid and bond, all of which deserve attention on account of their quality and value.

BIGGER BUSINESS

will result if your overseas trade is developed. The "British and Colonial Printer and Stationer" SPECIAL EXPORT ISSUES provide the most economical method of obtaining forceful representation throughout the world.

Started nearly forty years ago, these special issues were almost instantaneously successful, and to-day "The British and Colonial Printer and Stationer" stands pre-eminent as the printing trade journal, carrying the message of British Print throughout the world.

Without exceeding the bounds of modesty, we can legitimately claim that this journal has made the export departments of certain firms, whilst it has increased the overseas business of its advertisers generally.

It is not for us to presume to instruct supply houses their method of doing business—we can only give you the experience of our advertisers:—

> "It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your Journal has contributed towards this export business.—C. B., Ltd."

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	East Indies.	Canada.
India.	West Indies.	United States.
South Africa.	China.	South America.
	Japan.	

The next Special Export Issue will be published on

SEPTEMBER 10th, 1925.

One of our representatives will be pleased to call upon you at your office, and at your convenience He is entirely at your disposal for expert advice as to space, copy and lay-out.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

PERIODICAL ROOM
GENERAL LIBRARY
UNIV. OF MICH.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 97. NUMBER 11. [REGISTERED AS A NEWSPAPER.] LONDON: SEPTEMBER 10, 1925. Special Export Issue. 4d.

The reason why

some printers don't prosper is because they study only price and are "bluffed" into buying without ever comparing one machine with another.

On the other hand, there is the printer who goes all-out for—and gets—the finest machinery he knows of.

He's the man who prospers and you will find that his choice was

The World's Best Printing Inks.

YOU need inks that will give you unqualified satisfaction no matter under what climatic conditions you work, whether you print by Letterpress, Litho, Offset-litho, or any other process.

You need inks, too, which are reasonable in price, i.e., cheap in the true sense of the word. And you need inks which you can get without undue delay.

It is just by constant attention to these important points during the long course of their business career that Kidd's has become a household word among printers for all that is best and most reliable in printing inks.

Kidd's Price List free immediately on application.

Printers who cast their own rollers should not fail to buy the celebrated "J.K." Roller Composition which is made from the same high-grade materials which are used in Kidd's "Resilient" Rollers. It is obtainable in strengths to suit all climates.

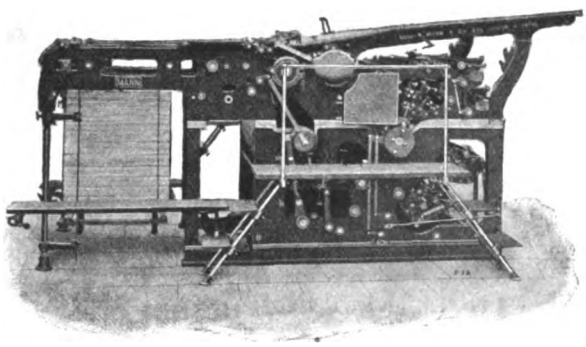
TWO MACHINES YOU SHOULD HAVE!

Patent Two-Colour and Perfecting Rotary Offset.



FITTED with Independent Damping Units to each plate, printed-side-upwards pile delivery, and only three main cylinders, this machine will print either—

Two Colours on the front of sheet, Same Colour front and back *(Perfecting)*, Different Colour front and back *(Perfecting)*, Single Colour front or back.

The change from Two-Colour to Perfecting is made in a few minutes by three simple adjustments.

Either damping units may be used to damp both plates or only one plate.

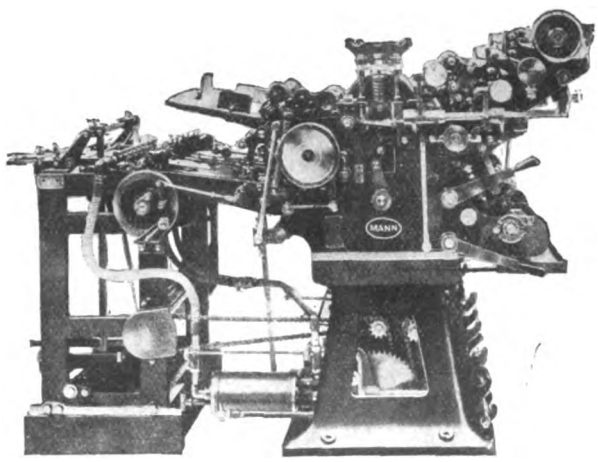
It is doubtful whether you could find a machine easier to operate.

Geo. Mann & Co. Ltd.

Offset Machinery Specialists,

HENRY STREET, GRAY'S INN ROAD, LONDON——WEST CENTRAL ONE.

Telephone: Museum 5740 (3 lines).
Telegrams: "Lithoman-Holb-London."
Cables: "Lithoman-London."



'Baby' (Demy Folio) Single Colour Rotary Offset.

THIS machine is supplied with or without an Automatic Suction Pile Feeder. Hand fed, the usual speed is 3,000 to 3,500 impressions per hour With the feeder, up to 6,000 impressions per hour are obtained.

The floor space, without the feeder, is 6¼ ft. by 4¼ ft., and with the feeder, 7¼ ft. by 4¾ ft.

Mann's "Baby" will just fit that empty corner and turn it into a little gold mine.

Get to know about MANN OFFSETS.——They mean a lot to you!

THE BRITISH & COLONIAL PRINTER

FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 97. NUMBER 11. [REGISTERED AS A NEWSPAPER.] LONDON: SEPTEMBER 10, 1925. Special Export Issue. 4d.

Export Notes and Comments

The Struggle for Export Trade.

THE general outlook in respect of British export trade remains, unfortunately, a puzzling and not altogether satisfactory one. Those who some months ago looked for a definite boom in overseas business have not had their expectations fulfilled on any large scale; and in some directions—notably in China—unanticipated troubles have arisen, to the severe restriction of trade. There are, however, grounds for hope that the storm in China is spending its force and will eventually be weathered without permanent injury to this promising export field. In India, too, there are signs which encourage confidence for the future, whilst from various British Colonies come indications that the imperial idea is gaining ground and that real effort and enterprise on the part of British firms in the direction of encouraging trade within the Empire will meet with lively and gratifying response.

The Government's Responsibility.

THE Federation of British Industries somewhat startled the country recently by issuing an arresting report upon trade conditions, stating that the improvement manifested for some years had been stopped, and that a depressed state of trade gave indications of becoming permanent. In indicating possible means of remedying this, emphasis was placed upon the need that the Government should economise in expenditure and should reduce the taxation that weighs so heavily upon British industry at the present time. There can be no doubt of the crying need for greater effort at national economy than the present Government has given evidence of exerting. A severe cutting down of national expenses and a judicious remission of taxation would do great things for trade at a time when assistance is sorely needed.

The Need for Enterprise.

DIFFICULT as things are, however, there is much to encourage the exporter who is determined to make good. Some indication of the general overseas situation as it affects the British manufacturer is to be found in an official volume of nearly 800 pages issued receutly by the Stationery Office entitled "Survey of Overseas Markets." This survey of the position of British industry in relation to world markets embodies the conclusions of the committee appointed a year ago by Mr. Ramsay MacDonald, then Premier, with Sir Arthur Balfour as chairman. It reviews very frankly the difficulties of the situation, and draws the moral of the need for something more than an easy-going continuation of methods that may have sufficed before the War. The committee call attention to the fact that, while the main forces with which our trade has had to contend are, so far as they arise in the overseas markets themselves, world forces, their effects are felt with special acuteness by a country like Great Britain, which depends so greatly on foreign trade to maintain the employment of its population. Of the forces referred to, some are without doubt transitory or removable, but others certainly represent permanent tendencies with which traders must inevitably reckon in future. It is therefore essential that all concerned should strive with all their power to accommodate their outlook, their methods, and their organisation to the changed and changing conditions of world trade.

Business Keenness in Australia.

AUSTRALIAN manufacturers, traders and merchants are particularly keen men of business, and their activities make considerable demand upon the resources of the printing establishments. Big strides have been made in recent years to enable craft houses to cope with the demands coming forward. Industrial unrest, however, acts as a brake, but in spite of this handicap, the printing industry is making steady headway. A favourable factor for British supply houses is the patriotic feeling which is entertained for the Mother Country. While this has not hitherto prevented large orders for machinery and other equipment going to America, the prospects of more orders being placed in England are better than they have been. British business methods are held in high esteem in the Commonwealth and this is bound to reflect to the advantage of home suppliers. With the development of industrial Australia the need for printed matter must extend at a big pace. Therefore it is advisable that the needs and opportunities of this vast territory should be studied with care and diligence.

New Zealand's Prosperity.

THE demand for printing presses and for the sundries and materials necessary for the production of printed matter varies very closely according to the general prosperity of a country, and it is therefore gratifying to the exporter who looks to New Zealand as a market to observe the big strides that country has been making. When the British members of the Empire Press Union visited Wellington the other day, the Prime Minister, Mr. Coates, put before them some striking figures. Since 1900, he said, the population, then 770,000, had nearly doubled, whilst in the last decade the total trade of the Dominion had increased from £47,827,000 to £104,592,000, the highest figure per capita of any country in the world. In 1900 the general revenue of the Dominion stood at £5,906,000. For the year ended March 31st last, it was £28,643,000, showing at the same time a satisfactory balance over expenditure. As showing the favour which New Zealand importers show toward the Mother Country, he pointed out that New Zealand had, unsolicited, given Preference to British goods and manufactures for many years past, and trade with the United Kingdom last year represented nearly 70 per cent. of the Dominion's total trade. Approximately 95 per cent. of the Government's orders of machinery and material were placed last year in Great Britain.

Opportunities in Western Canada.

USEFUL and timely advice concerning the openings for business in the Western Canadian market is furnished by the British Senior Trade Commissioner in Canada (Mr. F. W. Field). The report he has just sent to the Department of Overseas Trade is based upon observations made during a tour of Western Canada. Although the market is a relatively small one at present, it is bound to develop, and the capacity to consume the products of British manufacture will inevitably grow. It is a helpful factor that the sentiment of Western Canada, generally speaking, is strongly in favour of purchases within the Empire. This sentiment, indeed, pertains very largely throughout the Empire, and it is questionable whether our manufacturers and merchants take advantage of this. What can be done by a little initiative was demonstrated recently during the visit of a British manufacturer's agent to Newfoundland. He was received with open arms, and he returned with the largest single order that his firm had ever received. And there was more to follow!

Knowing Market Conditions.

A GREAT asset in catering for a particular market is to possess a knowledge of the local conditions. Mr. Field's report will help in this direction so far as Western Canada is concerned. He indicates how much may be wasted in time and money through ignorance of Customs regulations. For instance, a consignment of machinery was returned to the shipper in this country because he neglected to fill in a document regarding the fodder in which the machinery was packed. The Commissioner emphasies the point that it would be unwise to overlook the fact that a great number of firms now trading with Canada do not know the market, nor do they realise the adverse effect on present and future business, in a market which must eventually become one of prime importance, of the matters briefly outlined in this report, and of many others of a similar character. It is a mistake to under-estimate the strength of United States manufacturers in relation to the Canadian market. Large orders in hand for another country should not over-rule the importance on future trade of the proper handling of smaller orders for Canada.

Why it PAYS to set Display Work on the LINOTYPE

When the Linotype first supplanted a number of men for the composition of solid matter, it was immediately found to be the most economical means of producing set type. *Yet the case hands had not to move away from their single pair of type cases.*

The composition of display work at case, particularly large display, necessitates a deal of walking about from case rack to case rack—once for the setting and again for distribution.

But the All-Display Linotype here illustrated reduces large display work to the level of solid type matter, because—

The machine compositor has all the display faces he requires immediately at hand.

He sets all the lines of type he requires up to 36-point straight from the keyboard, just as he would set a "take" of solid 6-point.

There is no limit to the amount of display type he can set.

There are no "non-productive" hours—no "picking," no "turning," no heavy and frequent bills for new type.

And type distribution is entirely eliminated.

Is it not at least worth your while to think it over and send us your enquiries?

Canada's National Exhibition.

The Canadian National Exhibition at Toronto has just opened. A feature this year is the combined display of government bodies and co-operative societies, featuring especially Canadian-made products. Both Great Britain and France have also organised exhibits. British exhibitors are said to have been entirely satisfied at the results obtained through exhibiting at the C.N.E. in the past. More than 70 per cent. of last year's exhibitors will again be represented, whilst the total display of British products will be 50 per cent. larger than in 1924. Machinery manufacturers have an ambitious display in Machinery Hall. Last Saturday, September 5th, was the day chosen as Manufacturers' Day, in order that out-of-town visitors might have opportunity for a three-day stay in the city, Monday being Labour Day, a public holiday.

Printing Progress in South Africa.

A good deal of enterprise is being shown by newspapers in South Africa insofar as the mechanical equipment is concerned. A large Goss press has lately been installed by the *Rand Daily Mail* with fitting ceremony. This machine is the largest in Africa, and the work of erection was done by Messrs. Hubert Davies and Co., engineers, Johannesburg, being completed in the record time of 12 days. The previous world's record for such a task is said to have been established at the *Sun* office in Australia, three weeks then being occupied. The new *Mail* machine is 56 feet long (exclusive of the reel arms), 16 feet high (five decks), 6 feet 6 inches wide (exclusive of platforms), and weighs 155 tons. It will print an issue of 64 pages at the rate of 38,000 an hour, and smaller issues of pages at an increasing speed up to 78,000 an hour. When fully clothed it will carry 70 stereo plates of page size. Paper is fed simultaneous from four three-quarter-ton reels at each end of the machine, and comes out from the folders at the centre of the mechanism fully printed and counted.

Pretoria and Printing Classes.

An agitation is proceeding for the establishment of printing classes in Pretoria. In their absence the training of apprentices is being carried on with difficulty. The Pretoria Trades School appears to be the appropriate centre for such instruction and the attention of the principal is to be called to the matter. As there are 29 apprentices in training, it is thought these would form a useful nucleus for printing classes. The Transvaal Industry Joint Board is interesting itself in the subject and there are hopes that before long this crying need of the printing industry will be met.

School Requisities for South Africa.

Each of the four Provincial Councils in whose hands lies the control of the education of the young South African has before it at the present moment school building programmes of considerable magnitude, and we anticipate an early and substantial increase in the country's imports of school furniture and requisites—says the *British South African Export Gazette*. The trade is, as our readers are aware, now mainly British in origin, and has during the past two years grown in value very appreciably; but at the same time, we would point out that German competition is a factor calling for prompt recognition if the present satisfactory state of affairs is to be maintained. For example, imports of German school equipment into the Union were valued at only £246 in 1921, £1,096 in 1922, and £2,771 in 1923, but last year an increase to as much as £12,085 was achieved. The total trade, it is true, leapt in value from £19,395 in 1923 to over £56,000 in 1924, and the British share in the latter year was as much as £27,463, but even so the remarkable increase in business with Germany must necessarily cause anxiety to importers and shippers of British goods. Although Holland and America are both participating in the business on a larger scale than a year ago, they are not making such strides as is Germany, whose pre-war business in these lines was represented by a paltry £1,500 or so per annum, and it is evident that it is in this direction that the danger to British prospects of increased trade is most acute.

Business Conditions in Egypt.

An agricultural and industrial exhibition in Cairo from February 20th to March 6th, next year, ought to stimulate trade in Egypt. There is plenty of room for improvement after the recent disturbing conditions. A good deal of printing will be required in connection with the exhibition, and British supply houses ought to secure some of the orders which will be placed. It is hoped that the decision to promote this fixture indicates a return of peaceful conditions to Egypt, and that business will develop normally. For those who wish to know more about Egyptian affairs, a report prepared by Mr. E. H. Mulock, the British Commercial Secretary at Cairo, will be useful. The writer goes deeply into the question of British trade, and explains probable reasons why Italian competition is now so keen.

Better Business with Siam.

A report on the commercial situation in Siam at the close of the third quarter, 1924, prepared by Mr. H. R. Bird, Acting-Consul General, Bangkok, and published by the Department of Overseas Trade (1s. 7d. post free), makes the following reference to "paper, printed matter, and paper manufactures":—

"The United Kingdom has recovered its pre-war average of about one-third of the whole business done. The total imports were ticals 2,198,844 (£201,914), of which United Kingdom's share was ticals 751,914 (£69,046), against ticals 392,586 (£36,050) out of a total of ticals 2,010,983 (£184,663) last year. Advances are shown in all four divisions of the customs returns, the most marked being in printed matter other than books and music, where the sum of ticals 43,950 (£4,036) in 1922-23 has risen to ticals 251,321 (£23,078) in 1923-24." Contributions of various countries in respect of paper and paper manufactures (in ticals) were: United Kingdom 751,914, Japan 307,515, China 292,987, Hong Kong 271,988, Germany 158,007, Belgium 93,733, Denmark 91,115, all other countries 231,585.

Printing Ink for Europe.

Some useful indications of the position of the market for printing inks in several parts of Europe are provided by recent American consular reports. Ink is manufactured in Belgium by 16 concerns and the product is said to be sufficient for domestic demands and to export a surplus, according to a report from Brussels. Ordinary news-print ink is quoted for export at 7 cents per lb. The average annual imports of printing ink into Constantinople amount to 110,000 lbs. annually. The countries of origin rank approximately as follows: Germany 60 per cent, France 20 per cent., United Kingdom 10 per cent., and Italy 10 per cent. A very limited quantity is imported from the United States for special work. The duty on printing ink is $1.99 for 100 lbs. The American Commercial Attache at Stockholm reports that Sweden offers a market for printer's and lithographic ink. In 1923 Sweden produced inks to a value of $185,907 while during the same year only $65,127 worth was imported. The principal suppliers of the market are Denmark, Germany, Great Britain, United States, France and the Netherlands.

Posting to Brazil.

In order to save much annoyance, expense, and loss of time to Brazilian importers and others, catalogues and other propaganda matter should be sent to Brazil by letter or registered post. If sent by parcel post they are held up for weeks, and sometimes months, in the local post offices, added to which they have to pay a duty of $3 per kilo. Owing to the prevailing low exchange rates, with the consequent increase in the gold agio, this means that the actual duties payable are, roughly, 2s. 6d. per lb., which the majority of addressees now refuse to pay, so that the parcels are abandoned. Furthermore, taking parcels out of the Brazilian post offices is now a long and tedious process. Catalogues and pamphlets arriving by letter or registered post are subject to no delay in transit and pay no duties.

Trade with Russia.

It is, on the face of it, unfortunate that the Russian delegation which came to this country to place orders for textile machinery should have gone away without being able to fulfil their purpose. Their mission, however, does not appear to have been quite such a failure as at one time appeared. Some orders are understood to have been placed. But the expenditure of the whole five million pounds on machinery would have given a stimulus to other sections of industry which would have been very welcome. In the meantime a delegation of Labour Members of Parliament is visiting Russia to investigate the possibilities of improved trade between the two countries. It is much to be regretted that commercial relations between Great Britain and Russia—each needing so much what the other can supply—cannot be opened up with greater confidence. But the difficulties in the way are perhaps greater than appear to "the man in the street."

Franco-Belgian Treaty.

The French *Journal Officiel* of July 28th contains a Law, dated July 23rd, which authorises the ratification of the Commercial Arrangements between France and the Belgium-Luxemburg Economic Union which were signed on October 24th, 1924, and April 4th, 1925. Annex A sets out duties to be applied to certain French goods on importation into the Union. The following items are included: Greasy papers for copying, for tracing from pencil, ink, or typewriting, known as carbon papers, duty 40 frs. (co-efficient 2). Paper, cards and envelopes for letters, in receptacles containing less than 500 articles, and all fancy goods or articles "de luxe," duty 60 frs. (co-efficient 3). Manufactures of paper or hard board, carton-pierre, wood pulp, cellulose, vulcanised fibre or papier mâché, not specified or included elsewhere (in the Tariff), not for industrial use.—Simply moulded, compressed or hardened, with or without reliefs, duty 16 frs. (co-efficient 3). Fashion journals, free. These duties will also be applicable to similar goods of United Kingdom origin when they are brought into operation.

British Industries Fair.—It is authoritatively stated that the Treasury have acceded to the request of the Board of Trade to make a grant of £20,000 to assist in the promotion of the British Industries Fair. Accordingly, the Fair, which was suspended this year owing to the continuance of the British Empire Exhibition, will be revived next year, and will be held, probably at the White City, London, from February 15th to 20th. The subsidy will be expended in advertising the Fair more extensively both at home and overseas, and in reducing the cost to exhibitors, who will now be charged 2s. 6d. per sq. ft. for space taken instead of 3s., as at the 1924 Fair.

What our Manufacturers are Doing

Printing Machinery and Other Products that Merit the Attention of Overseas Buyers.

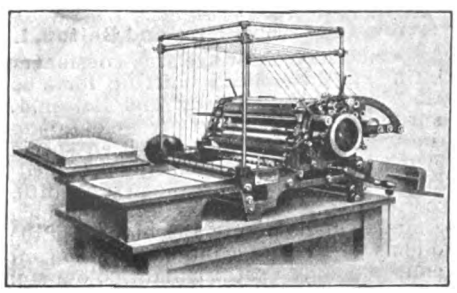
Machine Composition, etc.: Linotype and Machinery, Ltd.

At the recent Printing Exhibition at Islington, Messrs. Linotype and Machinery Ltd. showed for the first time three new machines. These were the All-Display Linotype, the L. and M. Perfector and the Pony Autoplate. The first of these has brought machine composition another step forward.

An "All-Display" Linotype.

It is similar to the standard model form, with side magazines, except that the channels of the main magazines are extra wide, so as to accommodate large faces. The all-slug method of type composition has much to commend it in addition to the economy effected by the rapidity of setting and non-distribution, and this machine makes it possible for every printer to arrange his composing department on this plan. It is a development of the regular Model 4 with side magazines, but is specially arranged as an "all-display Linotype." The main magazines instead of having the regular 90-matrix channels have only 72, so as to accommodate extra large matrices. An illustration of this machine is given on this page. The L. and M. Perfector is a very fine machine, built on the same lines and in the same works as the Miehle, with a bed movement similar to their premier single colour machine. This new machine embodies many advantages in regard to bed motion, ink distribution and so on, features which will be greatly appreciated by the printer. It is claimed that every plate cast by the Pony Autoplate is mathematically accurate in thickness and over bevels. The machine casts, bores, cuts the tail, trims, and cools semi cylindrical stereo plates ready for the press cylinders. It consists of a vertical casting box, a horizontal boring arch, tail-cutter and trimmer, and a cooling apparatus, and has been specially designed and built to suit the requirements of newspaper printers who need a quicker and more economical means of plate production than that of hand-casting, but who do not require the greater capacity of a Junior Autoplate. The Pony Autoplate is easily handled and requires little instruction for its satisfactory operation. The matrix can be quickly and easily set in the casting box, where it is retained in position by two steel guides. The pouring sheet, which is suspended in a framework attached to the top of the box, is swung down into position by the movement of a handle.

Varnishing, Drying and Ink-Mixing: Edmund Bush and Son, Ltd.



The well-known patent varnishing machine of this firm has been in great demand during the past few years, when most of the leading firms have installed this type of machine, which gives much satisfaction. By using a good varnish, the results obtained are excellent, the gloss being nearly equal to that of gelatine. It is suitable for either paper or showcards. The patent drying apparatus, which is worked in conjunction with the varnishing machine, is still popular in the trade. It is fully guaranteed to dry spirit varnished work without affecting the gloss on the material, either card or paper. This dryer is a great labour and floor space saver. It eliminates the old method of putting the sheets into single racks which occupy a great amount of space. The output is increased considerably and the apparatus can be attached to any make of varnishing machine. The patent ink-mixing machine is a speciality made in three sizes to suit the various users of ink. Old ink can be speedily restored to former working consistency. The machine is very economical and requires no special attention. It is made in three sizes for 28, 75 or 150 lbs. weight. With regard to ink grinding mills, Messrs. Bush's latest high-speed model is most powerfully built, and will give satisfaction everywhere. The mill is fitted with three chilled rolls, powerful bearings, sight feed lubrication, and all gearing cut from the solid. It is a great asset to any firm who have ink or colour grinding to do. Bronze blue, which is acknowledged to require great crushing power, can be done with comfort on this mill, which is made in two sizes, 24 in. by 12 in. and 20 in. by 10 in. Attention has previously been drawn to a new machine made by Messrs. Bush, intended for putting down in sub-offices of newspapers for the purpose of printing late intelligence sent to the sub-offices by telephone and other means. An important newspaper in the North of England has installed three of the new machines and has found them most successful. This paper has now ordered five others, and thus will shortly have eight of the machines running. The machine is speedy, simple, and reliable. It gives a good and clear impression at the rate of 6,000 copies an hour.

Rotary and Offset: Messrs. R. W. Crabtree and Sons, Ltd.

Messrs. R. W. Crabtree and Sons, Ltd., of Water lane, Leeds, and 7, Farringdon-road, London, E.C.1., report that business is very good in both the rotary newspaper machinery, and in the offset machinery branch which they established some five years ago They have sent out lately some of the largest newspaper presses in this country and the present order list is very satisfactory and includes a large amount of business in their "Rotaplate" machine and stereo machinery. In offset machines, they have just completed the order from one house for ten two-colour offsets, four single colour offsets, two direct rotaries, and other lithographic machinery. They have a full order list for offset machines, particularly of the two colour type, in which the advantages of their machines are now becoming well known. In the way of offset accessories, they are also busy with offset proofing presses, offset proofing platens, and other details.

Disk Ruling: Soldans, Ltd.

A machine which is causing a revolution in a small way in the world of jobbing machine ruling, is the "Baby" jobbing disk ruling machine handled by Messrs. Soldans, Ltd. Not only are two or more colours ruled in one operation, but cutting, creasing and perforating can also be carried out in the same

Soldans' "Baby" Disk Ruler.

operation or independently as desired. The machine is very compact and fast-running, being easily capable of an output of 3,000–3,500 double cap sheets per hour, ruled, cut, creased and perforated. Messrs. Soldans, Ltd., state that they will be pleased to give references from actual users in support of the claims made by them on behalf of the "Baby," which are fully supported by independent testimony.

Newspaper Types: John Haddon and Co.

An excellent means of showing the effects of their various types is adopted by Messrs. John Haddon and Co., typefounders and printers' engineers. They have had prepared a dozen newspaper page specimens, which show, at a glance, the style and effect of "news" head-

Digitized by Google

ings set in a number of series. Each sheet is set in type cast by Messrs. Haddon, and the specimens show clearly the uses of these types when applied to practical newspaper work. Anyone needing type for this purpose can see how any particular series will appear when made up in page form. The advantage of such an arrangement, of course, is obvious, and as Messrs. Haddon's types are used by the leading newspapers they will be pleased to send a set of these samples to all readers who are interested.

Composing Machines: Intertype, Ltd.

Since the Printing Exhibition, Intertype, Ltd., have been working with an augmented service staff to meet the record number of orders, both for Intertype machines and for supplies for other composing machines. They are now making an offer of matrix and supply part service to users of every type of line-casting machine, and have issued a special catalogue of matrices, borders, etc., for their use. A copy of this will be sent to any reader of the *British and Colonial Printer* who is interested. The Intertype "Mixer" which was described in our issue of June 28th, has met with universal approval. It finds favour

An Intertype Machine.
